General Information

This document contains the text of the Business Process Framework for context and more information please refer to “GB991 Core Frameworks Concepts and Principles” guidebook.

Preface

eTOM Business Process Framework

The eTOM or Business Process Framework is a reference framework for categorizing all the business activities used by an enterprise involved in delivering on-line Information, Communications and Entertainment services. This is done through definition of each area of business activity, in the form of process components or Process Elements that can be decomposed to expose progressive detail. These process elements can then be positioned within a model to show organizational, functional and other relationships, and can be combined within process flows that trace activity paths through the business.

The eTOM framework can serve as the blueprint for standardizing and categorizing business activities (or process elements) that will help set direction and the starting point for development and integration of Business and Operations Support Systems (BSS and OSS respectively). An important additional application for the eTOM framework is that it helps to support and guide work by TM Forum members and others to develop their solutions. It provides an industry-standard reference point, when considering internal process reengineering needs, partnerships, alliances, and general working agreements with other enterprises, and for suppliers into such enterprises, the eTOM framework outlines potential boundaries of process solutions, and the required functions, inputs, and outputs that must be supported by process solutions.

Introduction

This document contains the main text of eTOM for this domain. It is comprised of decompositions and descriptions of the process elements that make out this domain.

The focus of the Business Process Framework is on the business processes used by service providers, the linkages between these processes, and the use of Market, Product, Customer, Service, Resource, Business Partner, and Enterprise Management related information by multiple processes.

© TM Forum 2024. All Rights Reserved.

The decomposition starts with a top level process which is a Core Process that details the activity that takes place and describes all subsequent activities that occurs. Thereby this Core Process includes all of the information regarding the activity. Lower level processes also known as Task Processes are then describing a unique path of action and further detail the specific process. This is then repeated to lower level of granularly of up to seven levees.

At the start of each Level 2 process a diagram details all of its sub processes is placed. This diagram showers Level 3 process and the level 4 process below them in boxes where the same level boxes are side by side and the their child processes in side each box. Process that have further decomposition include another box in box diagram of level 5, 6 and 7 process if existing.

Process Associations and IDs

To aid understanding and navigation, each process described here has an associated indication.

Processes have been given a process ID throughout this document. The format of the numbering scheme work as follows:

.b.x.c.d.e where

b: This digit is used to identify the originator of the process It is set to 1 if the process is the TMF original one, to 2 otherwise so if a company chooses to extended the Business Process Framework it can do so keeping the original numbering and extend as needed.

x: Digit representing Domain

c: Digit representing Level 2 process

d: Digit representing Level 4 process

e: Digit representing Level 5 process

The unique identifier thus associated with individual processes can thus be used to assist in locating individual processes.

Typographic Conventions

- A Business Process is represented by a *decorator* in form of an arrow located to the top right. A red dot decorator with the initial TMF indicates that this is a TM Forum Business Process. The color yellow background hints to the business layer.

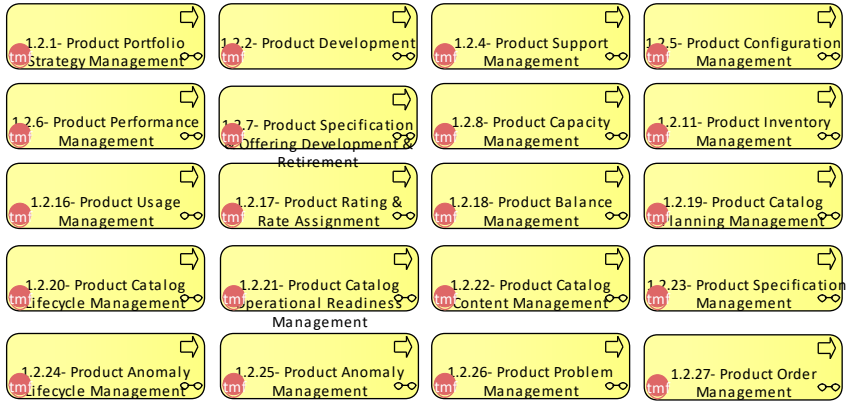
Product Domain



Product Domain Main Diagram

Product Portfolio Strategy Management

Process Identifier: 1.2.1

Hierarchy Level: 2

Brief Description:

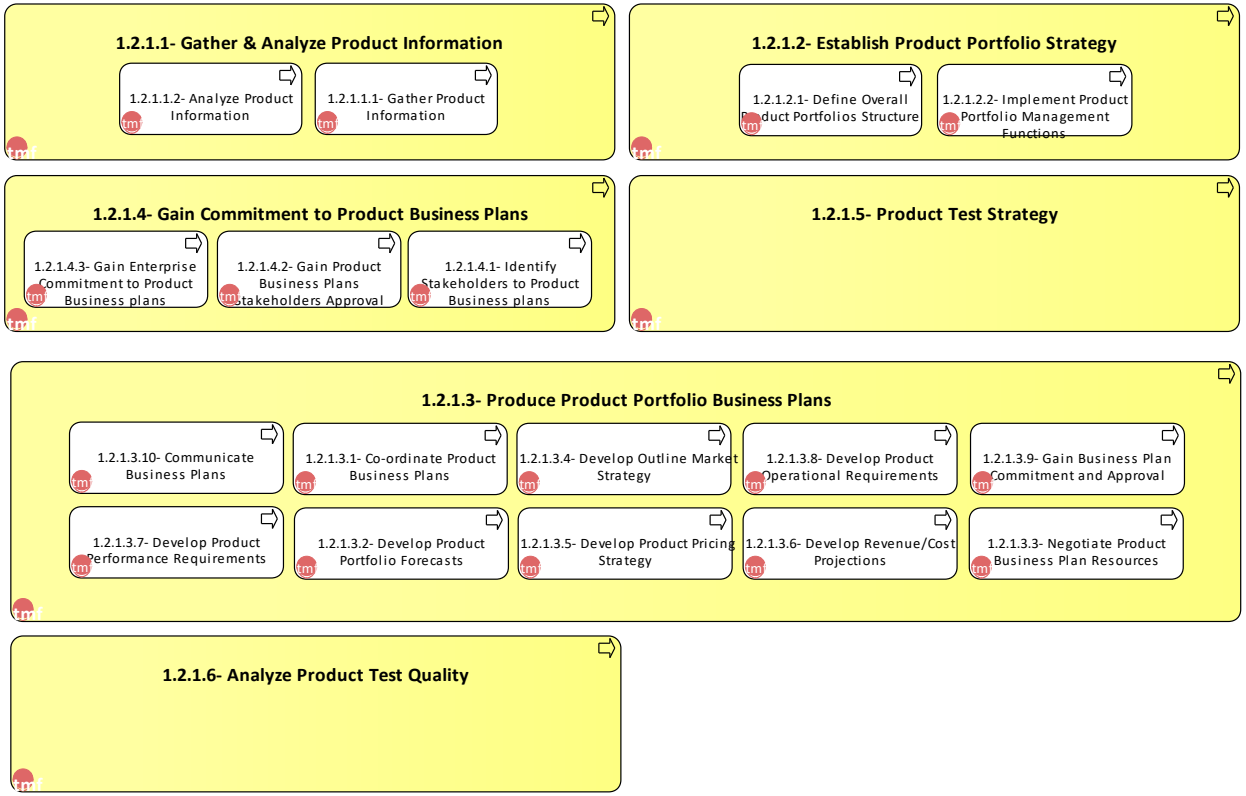
Product Portfolio Strategy Management business process grouping directs and controls activities that establish a systematic approach for managing the enterprise's range of products.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Product Portfolio Strategy Management includes activities to make decisions about products to develop, maintain, or phase out. It also has oversight on Product Allocation to maximize growth and profitability across the entire product portfolio, and individual Product Strategy to outline how a product will operate and support the business strategy and goals. Product Portfolio Strategy Management plans, supports development, and overseeing a product from concept to market release.

This process name was changed in 24.0. Old name was Product & Offer Portfolio Planning



© TM Forum 2024. All Rights Reserved.

Figure 1: Product Portfolio Strategy Management Children

Gather & Analyze Product Information

Process Identifier: 1.2.1.1

Hierarchy Level: 3

Brief Description:

Research information relating to product ideas and opportunities and identify product opportunities.

Extended Description:

Gather & Analyze Product Information processes research information relating to product ideas and opportunities and identify product opportunities based on the analysis of external and internal information sources. These processes encompass analysis to identify new products as well as reviewing existing products. They also include the establishment and management of relationships with external providers of product information, and the management of internal resources used for providing product information.

Gather Product Information

Process Identifier: 1.2.1.1.1

Hierarchy Level: 4

Brief Description:

Establish and management of external providers and internal resources for providing product information.

Extended Description:

Gather Product information processes focus on establishment and Management of relationships with external providers of product information, and management of internal resources used for providing product information.

© TM Forum 2024. All Rights Reserved.

Information may also be gathered by interacting with processes that perform competitive analysis, market research, and market analysis.

Analyze Product Information

Process Identifier: 1.2.1.1.2

Hierarchy Level: 4

Brief Description:

Identify new product offerings, review existing product offerings, research information about product offering ideas.

Extended Description:

Analyze Product information processes focus on research of information relating to product ideas and opportunities and identify product opportunities based on analysis of the external and internal information sources. These processes are responsible for analysis to identify new product offerings as well as review of existing product offerings.

If new resource and/or service infrastructure is needed then this process interacts with the processes that develop resource strategies and/or service strategies to insure new product offerings can be developed. Similarly interaction with market/sales strategy processes may result if new sales channels or market segments are needed.

Establish Product Portfolio Strategy

Process Identifier: 1.2.1.2

Hierarchy Level: 3

Brief Description:

Define and agree the product and offer portfolio structure to be used within the enterprise.

© TM Forum 2024. All Rights Reserved.

Extended Description:

The Establish Product Portfolio Strategy processes define the overall structure of the product portfolios to be used across the enterprise, or between or within business units. These products and product portfolios form the basis of offers made to customers. It includes the agreement on and implementation of cross-portfolio and cross-product co-ordination and management functions.

Define Overall Product Portfolios Structure

Process Identifier: 1.2.1.2.1

Hierarchy Level: 4

Brief Description:

Define overall structure of product portfolios.

Extended Description:

Define overall product portfolios structure processes focus on defining overall structure of product portfolios to be used across the enterprise, or between or within business units. These products and product portfolios form the basis of offers made to customers.

Implement Product Portfolio Management Functions

Process Identifier: 1.2.1.2.2

Hierarchy Level: 4

Brief Description:

Implement cross-portfolio and cross-product co-ordination.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Implement product portfolio management functions processes focus on agreement on and implementation of cross-portfolio and cross-product co-ordination and management functions.

Produce Product Portfolio Business Plans

Process Identifier: 1.2.1.3

Hierarchy Level: 3

Brief Description:

Develop product and product portfolio business plans to guide product development within the enterprise.

Extended Description:

The Produce Product Portfolio Business Plans processes develop product and product portfolio business plans to guide new product development and enhancements for existing products within the enterprise. These plans include portfolio forecasts, negotiation for required level of resources, outlines of the strategy for offering of the products into the market, anticipated pricing strategies, projected revenues and costs, product performance requirements, operational requirements, gaining interdepartmental, process, infrastructure and supply chain commitment and executive approval, as well as communicating the plans.

The portfolio plans can be developed top-down from the overall enterprise business strategy, or can be developed as a bottom-up amalgamation and summary of individual product plans contained within the portfolio, or some combination of the two approaches.

Co-ordinate Product Business Plans

Process Identifier: 1.2.1.3.1

Hierarchy Level: 4

Brief Description:

© TM Forum 2024. All Rights Reserved.

Co-ordinate development of product and product portfolio business plans to guide new product development and enhancements for existing products within the enterprise.

Extended Description:

Not used for this process element

Develop Product Portfolio Forecasts

Process Identifier: 1.2.1.3.2

Hierarchy Level: 4

Brief Description:

Develop portfolio forecasts.

Extended Description:

Not used for this process element

Negotiate Product Business Plan Resources

Process Identifier: 1.2.1.3.3

Hierarchy Level: 4

Brief Description:

Negotiate for required level of resources.

Extended Description:

Not used for this process element

© TM Forum 2024. All Rights Reserved.

Develop Outline Market Strategy

Process Identifier: 1.2.1.3.4

Hierarchy Level: 4

Brief Description:

Develop outlines of the strategy for offering of the products into the market.

Extended Description:

Not used for this process element

Develop Product Pricing Strategy

Process Identifier: 1.2.1.3.5

Hierarchy Level: 4

Brief Description:

Develop anticipated pricing strategies.

Extended Description:

Not used for this process element

Develop Revenue/Cost Projections

Process Identifier: 1.2.1.3.6

Hierarchy Level: 4

Brief Description:

Gain Business Plan Commitment and Approval

Process Identifier: 1.2.1.3.9

Hierarchy Level: 4

© TM Forum 2024. All Rights Reserved.

Brief Description:

Gain interdepartmental, process, infrastructure and partnering commitment and executive approval.

Extended Description:

Not used for this process element

Communicate Business Plans

Process Identifier: 1.2.1.3.10

Hierarchy Level: 4

Brief Description:

Communicating the plans.

Extended Description:

Not used for this process element

Gain Commitment to Product Business Plans

Process Identifier: 1.2.1.4

Hierarchy Level: 3

Brief Description:

Gain enterprise commitment to the product portfolio strategy and individual product plans.

Extended Description:

© TM Forum 2024. All Rights Reserved.

The Gain Commitment to Product Business Plans processes gain enterprise commitment to the product portfolio strategy and individual product plans. These processes include all aspects of identification of stakeholders and negotiation to gain stakeholder approval.

Identify Stakeholders to Product Business plans

Process Identifier: 1.2.1.4.1

Hierarchy Level: 4

Brief Description:

Identify stakeholders of Product Business plans.

Extended Description:

Not used for this process element

Gain Product Business Plans Stakeholders Approval

Process Identifier: 1.2.1.4.2

Hierarchy Level: 4

Brief Description:

Negotiate and gain stakeholders' approval for product business plans.

Extended Description:

Gain Product Business Plans Stakeholders Approval negotiates and gains stakeholders' approval for product business plans.

Typical questions that may be asked are:

© TM Forum 2024. All Rights Reserved.

- Is it necessary to introduce a new product?
- When will the product break even?

If the answer to the first question is no, then the plan may be rejected. If the break even point is too far in the future the plan may be rejected or the plan may have to be revised so that the break even point is reached sooner.

Gain Enterprise Commitment to Product Business plans

Process Identifier: 1.2.1.4.3

Hierarchy Level: 4

Brief Description:

Gain Enterprise commitment to the product portfolio strategy and individual product plans.

Extended Description:

Not used for this process element

Product Test Strategy

Process Identifier: 1.2.1.5

Hierarchy Level: 3

Brief Description:

Product Test Strategy develops the strategies of the enterprise for Product Test.

Extended Description:

Product Test Strategy develops the strategies of the enterprise for Product Test.

© TM Forum 2024. All Rights Reserved.

This process is in charge of identifying types of Product Test to be conducted according to different context (i.e. business activities) for types of products.

The different context for Product Test are:

- Product Specification Development & Retirement to qualify the capacity to deliver Products before validating a new ProductSpecification,
- Order Handling (Customer Order Orchestration) to test the Product before closing the CustomerOrderItem,
- Product Performance Management to test Product performance,
- Customer Problem Handling to test Product functioning,
- Product Test Management to conduct tests not specific to a customer's product.

Analyze Product Test Quality

Process Identifier: 1.2.1.6

Hierarchy Level: 3

Brief Description:

Product Test Quality Analysis processes perform quality analysis of product testing processes, in order to continuously fine-tune and improve them.

Extended Description:

Analyze Product Test Quality process performs quality analysis of testing processes, in order to continuously fine-tune and improve them.

Product Test Quality Analysis processes provide analysis of the performance of product testing processes to ensure their continuous fitness for purpose, and eventually propose modifications or enhancements to the current product test specifications (including: product testing methods, quota, authorized users, recommendations and course of action if needed).

The analysis is done using statistical product test usage data to evaluate product tests performance and required improvements if needed.

© TM Forum 2024. All Rights Reserved.

Following the analysis, typical course of action can be:

- No changes needed currently,
- Creation of additional product tests,
- Improving existing product tests,
- Removing product tests that are no longer relevant.

Product Development

Process Identifier: 1.2.2

Hierarchy Level: 2

Brief Description:

Product Development business process grouping directs and controls activities to enable the qualification of opportunities, quantify, build, change, and deliver products. Product development encompasses the journey of a product from its initial concept to its release.

Extended Description:

Product Development business process grouping supports the business in creating new products or enhancing existing ones, including conceptualization to market launch. It handles the requisite infrastructure (when the technologies, scope, or type/depth of infrastructure is significantly different from that currently employed in the enterprise e.g., the introduction of Third-generation Mobile Telephony networks) and begins with identifying a market need, where a problem that requires solving or an opportunity is pinpointed, and the potential for a product-based solution is assessed.

This process was renamed in 24.0 Old name was Product & Offer Capability Delivery

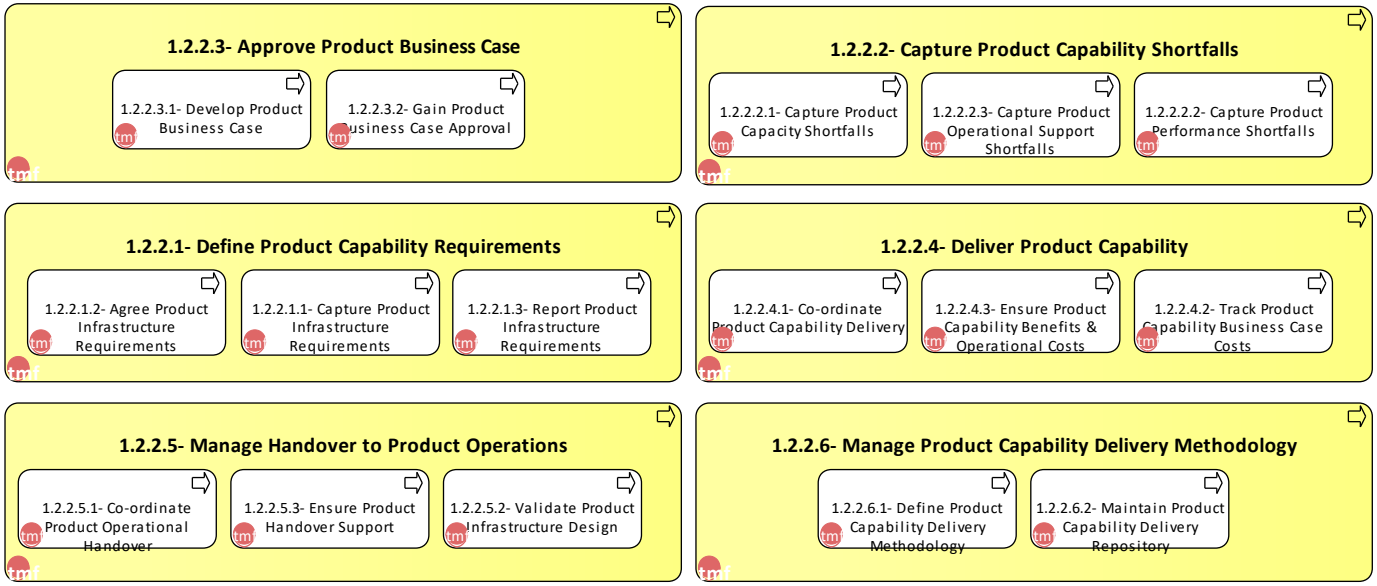

Figure 2: Product Development Children

Define Product Capability Requirements

Process Identifier: 1.2.2.1

Hierarchy Level: 3

Brief Description:

Define and obtain agreement to the detailed infrastructure requirements to support the product portfolio and individual product plans.

Extended Description:

© TM Forum 2024. All Rights Reserved.

The Define Product Capability Requirements processes define and obtain agreement to the detailed infrastructure requirements to support the product portfolio and individual product plans. Product infrastructure requirements to support new product initiatives for the product lifecycle management are captured in this process, as well as any product infrastructure requirements needed to support the specific offers being made to customers through the sales channels. These processes also identify the service infrastructure capabilities required to deliver the product infrastructure. The processes include any interaction with cross-enterprise co-ordination and management functions to ensure that the requirements capture the needs of all stakeholders.

These processes provide input into the requirements capture processes in the Service and Party Offering Development & Retirement processes, and potentially the Resource, horizontal process groupings.

Capture Product Infrastructure Requirements

Process Identifier: 1.2.2.1.1

Hierarchy Level: 4

Brief Description:

Not used for this process element.

Extended Description:

These processes define the detailed infrastructure requirements to support the product portfolio and individual product plans. Product infrastructure requirements to support new product initiatives in the PLM vertical are captured in this process, as well as any product infrastructure requirements needed to support the specific offers being made to customers through the sales channels. These processes also identify the service infrastructure capabilities required to deliver the product infrastructure.

Agree Product Infrastructure Requirements

Process Identifier: 1.2.2.1.2

Hierarchy Level: 4

Brief Description:

© TM Forum 2024. All Rights Reserved.

Not used for this process element.

© TM Forum 2024. All Rights Reserved.

Extended Description:

These processes obtain agreement to the detailed infrastructure requirements to support the product portfolio and individual product plans. The processes include any interaction with cross-enterprise co-ordination and management functions to ensure that the requirements capture the needs of all stakeholders.

Report Product Infrastructure Requirements

Process Identifier: 1.2.2.1.3

Hierarchy Level: 4

Brief Description:

These processes provide input into the requirements capture processes in the Service and Party Offering Development & Retirement processes, and potentially the Resource domain process groupings.

Extended Description:

Not used for this process element

Capture Product Capability Shortfalls

Process Identifier: 1.2.2.2

Hierarchy Level: 3

Brief Description:

Identify specific or imminent product capacity, product performance and/or product operational support shortfalls.

© TM Forum 2024. All Rights Reserved.

Extended Description:

The Capture Product Capability Shortfalls processes identify specific or imminent product capacity, product performance and/or product operational support shortfalls. These processes take information available from the Customer Relationship Management processes to establish detailed views of anticipated product capacity and performance shortfalls and support process issues.

Capture Product Capacity Shortfalls

Process Identifier: 1.2.2.2.1

Hierarchy Level: 4

Brief Description:

These processes identify specific or imminent product capacity shortfalls. These processes take information available from the Customer Relationship Management processes to establish detailed views of anticipated product capacity issues.

Extended Description:

Not used for this process element

Capture Product Performance Shortfalls

Process Identifier: 1.2.2.2.2

Hierarchy Level: 4

Brief Description:

Not used for this process element.

Extended Description:

© TM Forum 2024. All Rights Reserved.

These processes identify specific or imminent product performance shortfalls. These processes take information available from the Customer Relationship Management processes to establish detailed views of anticipated product performance issues.

Capture Product Operational Support Shortfalls

Process Identifier: 1.2.2.2.3

Hierarchy Level: 4

Brief Description:

Not used for this process element.

Extended Description:

These processes identify specific or imminent product operational support shortfalls. These processes take information available from the Customer Relationship Management processes to establish detailed views of anticipated product operational support issues.

Approve Product Business Case

Process Identifier: 1.2.2.3

Hierarchy Level: 3

Brief Description:

Develop and gain approval for a business case to develop and deliver the required capabilities, including identification of potential partners.

Extended Description:

The Approve Product Business Case processes capture all activities required to develop and gain the necessary level of approval for a business case to develop and deliver the required capabilities, including identification of potential business partners. The business case should identify any required product infrastructure components, development costs and anticipated benefits, including revenue gains, productivity gains, performance improvements and/or operational cost improvements. The business case should also include a general view of the types of product offers which could be developed and

© TM Forum 2024. All Rights Reserved.

deployed using the product infrastructure, but would not necessarily include a specific proposal to launch a specific product. This later activity is managed by the PLM processes. The processes include any interaction with cross-enterprise co-ordination and management functions to ensure that the business case is supported by all stakeholders.

Develop Product Business Case

Process Identifier: 1.2.2.3.1

Hierarchy Level: 4

Brief Description:

Not used for this process element.

Extended Description:

These processes capture all activities required to develop a business case to develop and deliver the required capabilities, including identification of potential partners. The business case should identify any required product infrastructure components, development costs and anticipated benefits, including revenue gains, productivity gains, performance improvements and/or operational cost improvements. The business case should also include a general view of the types of product offers which could be developed and deployed using the product infrastructure, but would not necessarily include a specific proposal to launch a specific product. This later activity is managed by the PLM processes.

Gain Product Business Case Approval

Process Identifier: 1.2.2.3.2

Hierarchy Level: 4

Brief Description:

Not used for this process element.

Extended Description:

© TM Forum 2024. All Rights Reserved.

These processes capture all activities required to gain the necessary level of approval for a business case to develop and deliver the required capabilities. The processes include any interaction with cross-enterprise co-ordination and management functions to ensure that the business case is supported by all stakeholders.

Deliver Product Capability

Process Identifier: 1.2.2.4

Hierarchy Level: 3

Brief Description:

Manage the co-coordinated delivery in line with the approved business case of all required product infrastructure capabilities for that business case across the enterprise.

Extended Description:

The Deliver Product Capability processes ensure the co-coordinated delivery in line with the approved business case of all required product infrastructure capabilities for that business case across the enterprise. It is predominantly a program/project management function, with the detailed management of individual infrastructure component delivery managed through separate processes. The processes track and ensure that the business case cost parameters are met, and anticipated benefits and ongoing operational costs are likely to be achieved.

Co-ordinate Product Capability Delivery

Process Identifier: 1.2.2.4.1

Hierarchy Level: 4

Brief Description:

Not used for this process element.

Extended Description:

© TM Forum 2024. All Rights Reserved.

These processes ensure the co-coordinated delivery in line with the approved business case of all required product infrastructure capabilities for that business case across the enterprise. It is predominantly a program/project management function, with the detailed management of individual infrastructure component delivery managed through separate processes.

Track Product Capability Business Case Costs

Process Identifier: 1.2.2.4.2

Hierarchy Level: 4

Brief Description:

These processes track and ensure that the business case cost parameters are met for all required product infrastructure capabilities.

Extended Description:

Not used for this process element

Ensure Product Capability Benefits & Operational Costs

Process Identifier: 1.2.2.4.3

Hierarchy Level: 4

Brief Description:

These processes track and ensure that the anticipated benefits and ongoing operational costs are likely to be achieved for all required product infrastructure capabilities.

Extended Description:

Not used for this process element

© TM Forum 2024. All Rights Reserved.

Manage Handover to Product Operations

Process Identifier: 1.2.2.5

Hierarchy Level: 3

© TM Forum 2024. All Rights Reserved.

Brief Description:

Manage the processes involved in handover of deployed product infrastructure to operational control.

Extended Description:

The Manage Handover to Product Operations processes manage the processes involved in handover of deployed product infrastructure to operational control. These processes ensure that all performance and operational design requirements have been met by the installed product infrastructure, and that all tools, test equipment, operational procedures, support groups, and training is in place to allow for successful operation. These processes include the management and coordination of all stakeholders required to gain approval and acceptance of the handover to operational control.

Co-ordinate Product Operational Handover

Process Identifier: 1.2.2.5.1

Hierarchy Level: 4

Brief Description:

Not used for this process element.

Extended Description:

These processes co-ordinate the processes involved in handover of deployed product infrastructure to operational control, including the management and coordination of all stakeholders required to gain approval and acceptance of the handover.

Validate Product Infrastructure Design

Process Identifier: 1.2.2.5.2

Hierarchy Level: 4

Brief Description:

© TM Forum 2024. All Rights Reserved.

These processes ensure that all performance and operational design requirements have been met by the installed product infrastructure.

Extended Description:

Not used for this process element

Ensure Product Handover Support

Process Identifier: 1.2.2.5.3

Hierarchy Level: 4

Brief Description:

These processes ensure that all tools, test equipment, operational procedures, support groups, and training is in place to allow for successful operation.

Extended Description:

Not used for this process element

Manage Product Capability Delivery Methodology

Process Identifier: 1.2.2.6

Hierarchy Level: 3

Brief Description:

Define and manage the methodology to be adopted for product capability delivery across the enterprise.

Extended Description:

The Manage Product Capability Delivery Methodology processes define and manage the methodology to be adopted for product capability delivery across the enterprise. The processes define the procedures and steps to follow to ensure that all project activities across the enterprise to develop infrastructure

© TM Forum 2024. All Rights Reserved.

capability are co-coordinated, visible and controlled. These processes define the steps in the methodology, and approval process or gates to be passed by individual product capability delivery projects, and may maintain a repository of all activities as a part of the coordination aspects.

Define Product Capability Delivery Methodology

Process Identifier: 1.2.2.6.1

Hierarchy Level: 4

Brief Description:

Not used for this process element.

Extended Description:

These processes define the methodology to be adopted for product capability delivery across the enterprise. The processes define the procedures and steps to follow to ensure that all project activities across the enterprise to develop infrastructure capability are co-coordinated, visible and controlled. These processes define the steps in the methodology, and approval process or gates.

Maintain Product Capability Delivery Repository

Process Identifier: 1.2.2.6.2

Hierarchy Level: 4

Brief Description:

Not used for this process element.

Extended Description:

These processes manage the methodology to be adopted for product capability delivery across the enterprise. These processes may maintain a repository of all activities as a part of the coordination aspects, including approval process or gates to be passed by individual product capability delivery projects.

© TM Forum 2024. All Rights Reserved.

Product Support Management

Process Identifier: 1.2.4

Hierarchy Level: 2

Brief Description:

Product Support Management processes ensure the support capability is in place to allow the CRM Fulfillment, Assurance and Billing processes to operate effectively.

Extended Description:

Product Support Management processes ensure the support capability is in place to allow the Product Fulfillment, Assurance and Billing processes to operate effectively.

The responsibilities of these processes include, but are not limited to:

• Provision of product Inventory process infrastructure

• Policy support and decision support knowledge for product

• Monitoring and reporting on the capabilities and costs of the individual Product FAB processes

• Longer-term trend analysis on product FAB processes in order to establish the extent to which enterprise targets for these processes are being achieved and/or the need for the processes to be modified.

This Process was renamed in 24.0 Old name was: Product Readiness & Support

© TM Forum 2024. All Rights Reserved.

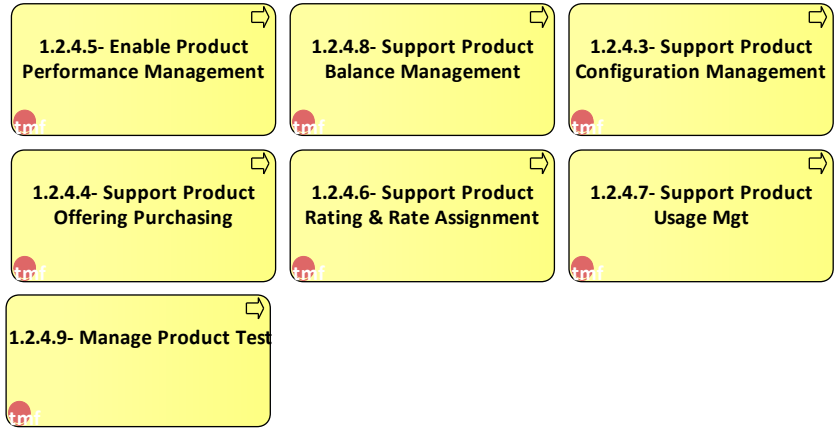

Figure 3: Product Support Management Children

Support Product Configuration Management

Process Identifier: 1.2.4.3

Hierarchy Level: 3

Brief Description:

Support Product Configuration Management ensures that all information, materials, systems and resources are available so that the Product Configuration Management processes can operate effectively.

Extended Description:

The purpose of the Support Product Configuration Management processes is to ensure that there is capability (for example, information, materials, systems and resource) so that the Product Configuration Management processes can operate effectively when a product needs to be configured by specifying how the product operates or functions in terms of a product's configurable parameters, collectively called characteristics, and related configurations of products, services, and resources that are part of its overall configuration.

© TM Forum 2024. All Rights Reserved.

Examples are information on how to handle unusual configuration requests based on temporary situations, systems needed to accept and track product configurations, requests for the provisioning of additional parameters or resources where it has been identified that current available parameters or resources will impact on effective product configuration.

These processes are responsible for implementing generic and specific changes to product configuration capabilities. This support could be in updating configuration scripts, batch procedures, etc.

These processes undertake trend analysis on product configurations, e.g. type, frequency, duration, outcome.

Support Product Offering Purchasing

Process Identifier: 1.2.4.4

Hierarchy Level: 3

Brief Description:

Support Product Offering Purchasing ensures that all information, materials, systems and resources are available so that the Product Offering Purchasing processes can operate effectively.

Extended Description:

The purpose of the Support Product Offering Purchasing processes is to ensure that there is capability (for example, information, materials, systems and resources) so that the Product Offering Purchasing processes can operate effectively when there is an inbound/outbound purchase of one or more product offerings, changes an offering being purchased, or reviewing an entire purchase.

Examples are information on how to handle product purchases including shopping purchases in the form of in-store, shopping cart purchases, window shopping (a form of browsing) and purchases in the form of product (offering) orders that result in a product being delivered to a party or from a party.

These processes are responsible for implementing generic and specific changes to product offering purchasing capabilities. This support could be in updating scripts, batch procedures, etc.

These processes undertake trend analysis on product offerings purchasing, e.g. type, frequency, duration, outcome.

© TM Forum 2024. All Rights Reserved.

Enable Product Performance Management

Process Identifier: 1.2.4.5

Hierarchy Level: 3

Brief Description:

Enable Product Performance Management ensures that all information, materials, systems and resources are available so that the Product Performance Management processes can operate effectively.

Extended Description:

The purpose of the Support Enable Product Performance Management processes is to ensure that there is capability (for example, information, materials, systems and resources) so that the product performance management processes can operate effectively to manage, track, monitor, analyze, improve and report on the performance of specific products.

Examples are information on how to handle product performance management including performance analysis, statistics, trends, etc.

These processes are responsible for implementing generic and specific changes to product performance management capabilities. This support could be in updating scripts, batch procedures, surveys, etc.

These processes undertake trend analysis on product performance management, e.g. product performance categories, performance trends, overall QoS delivered, outcomes, etc.

Support Product Rating & Rate Assignment

Process Identifier: 1.2.4.6

Hierarchy Level: 3

Brief Description:

Ensure that all information and systems are available so that the Product Rating & Rate Assignment processes can be completed without delay.

© TM Forum 2024. All Rights Reserved.

Extended Description:

The purpose of the Support Product Rating & Rate Assignment processes is to make sure that there is capability (for example, information, systems and resources) so that the Charging processes can operate effectively. Examples are information needed to calculate the value of the product e.g. tariffs, price plans, accumulated usage, contracts, etc., information needed to apply the discounts to product prices at an individual product level, information needed to accumulate items for rating and information on how to manage the assignment relationships with Billing Account.

These processes undertake trend analysis on charging.

Support Product Usage Mgt

Process Identifier: 1.2.4.7

Hierarchy Level: 3

Brief Description:

Ensure that all information and systems are available so that the Product Usage Mgt process can be completed without delay.

Extended Description:

The purpose of the Support Product Usage Mgt process is to make sure that there is capability (for example, information, systems and resources) so that the Product Usage Mgt process can operate effectively. For example the Product Usage records (aka billing events) to process, the information needed to enrich the Product Usages (e.g. customer, product, or other reference data, price), the schema to reformat the Product Usage records.

These processes undertake trend analysis on billing events management.

Support Product Balance Management

Process Identifier: 1.2.4.8

Hierarchy Level: 3

Brief Description:

© TM Forum 2024. All Rights Reserved.

Ensure that all information and systems are available so that the Product Balance Management processes can be completed without delay.

Extended Description:

The purpose of the Support Product Balance Management process is to make sure that there is capability (for example, information, systems and resources) so that the Support Product Balance Management process can operate effectively. For example policy defined to mange balance (e.g. minimum allowable balance limit, balance expiration dates), account information needed to operating the balance.

These processes undertake trend analysis on balance management.

Manage Product Test

Process Identifier: 1.2.4.9

Hierarchy Level: 3

Brief Description:

Manage Product Test processes manage the end-to-end execution of a test or test scenario for products not specific to a customer.

Extended Description:

Manage Product Test processes manage the end-to-end execution of a test or test scenario for products not specific to a customer. Tests can be manual or automated.

Product Test Management processes rely on Service Test Management and Resource Test Management processes due to dependencies between product tests, service tests and resource tests.

Product Test Management includes:

© TM Forum 2024. All Rights Reserved.

- Identification of product tests needed according to fulfilment and assurance issues
- triggering of product tests in manual or automated mode
- Execution of product tests
- Verification of test authorization (role and context) and quota management
- Identification and prioritization of tests
- Setting up the test context and configuration
- Triggering appropriate service & resource Tests
- Tests can be on-demand or planned according to specific needs
- Enrichment with service and resource tests results based on applicable product test rules
- Reporting of test results

Product Configuration Management

Process Identifier: 1.2.5

Hierarchy Level: 2

Brief Description:

Configure or create a new version of a configuration for an entity, such as a product, service, or resource, as defined by a configuration specification. Modify a configuration and values for configuration parameters, and remove a configuration.

Extended Description:

Configuration Management configures or creates a new version of a configuration for an entity, such as a product, service, or resource, as defined by a configuration specification. This process also modifies a configuration and values for configuration parameters, and removes a configuration.

© TM Forum 2024. All Rights Reserved.

The configuration of one entity may be required the configuration of other entities as defined by a selected configuration specification to use. For example, the configuration of a product may require the configuration of a service and a physical resource, such as a device.

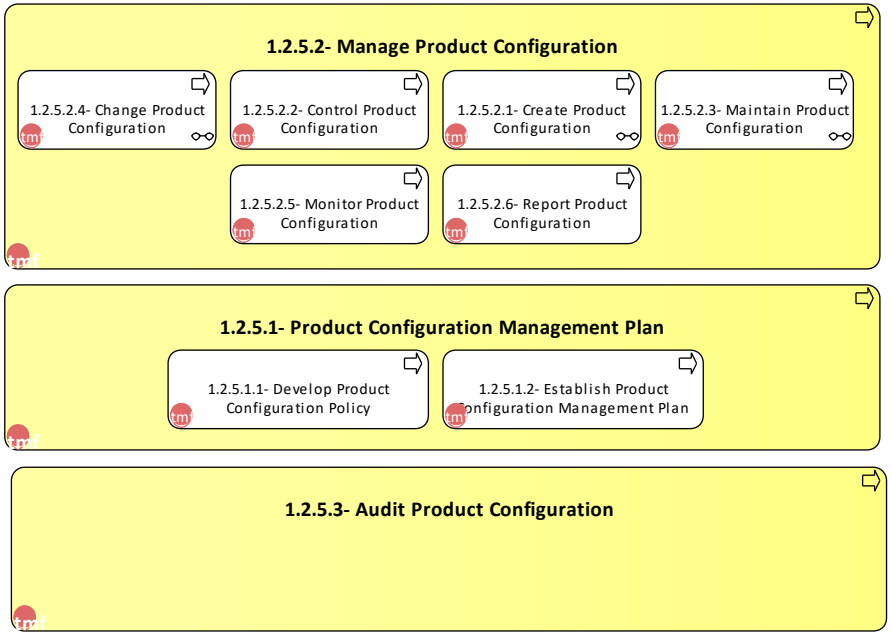

Figure 4: Product Configuration Management Children

Manage Product Configuration

Process Identifier: 1.2.5.2

Hierarchy Level: 3

Brief Description:

© TM Forum 2024. All Rights Reserved.

Manage Product Configuration business activity is in charge of creating, maintaining, controlling, changing and reporting Product Configuration according to Product Configuration Plans.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Manage Product Configuration business activity is in charge of creating, maintaining, controlling, changing and reporting Product Configuration according to Product Configuration Plans.

Manage Product Configuration will establish and maintaining consistency of a product's performance, functional, and physical attributes within the limits defined by product requirements, product design, and operational information throughout the Products Lifecycle.

Create Product Configuration

Process Identifier: 1.2.5.2.1

Hierarchy Level: 4

Brief Description:

Create Product Configuration business activity handle configuration of Product configuration (configuration items). This includes creating configuration constraints, configuration relationships and their associations.

Extended Description:

Create Product Configuration business activity handle configuration of Product configuration (configuration items). This includes creating configuration constraints, configuration relationships and their associations.

This business activity supports product requirement management, product specification management and product change management.

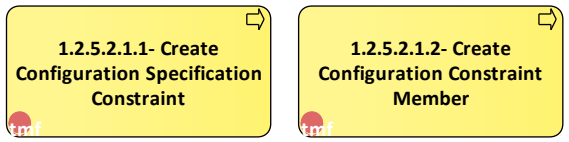

Figure 5: Create Product Configuration Children

© TM Forum 2024. All Rights Reserved.

Create Configuration Specification Constraint

Process Identifier: 1.2.5.2.1.1

Hierarchy Level: 5

Brief Description:

Create Configuration Constraint, business activity establishes and implements checks and controls that are necessary to determine when a configuration item or attribute is required during the configuration process.

Extended Description:

Create Configuration Constraint, business activity establishes and implements checks and controls that are necessary to determine when a configuration item or attribute is required during the configuration process.

Create Configuration Constraint Member

Process Identifier: 1.2.5.2.1.2

Hierarchy Level: 5

Brief Description:

Create Configuration Specification Constraint Member business activity associates component constraint that represent specific configuration specification check point.

Extended Description:

Create Configuration Specification Constraint Member business activity associates component constraint that represent specific configuration specification check point.

Constraint Members represent another configuration parameter, characteristics or attribute.

© TM Forum 2024. All Rights Reserved.

Control Product Configuration

Process Identifier: 1.2.5.2.2

Hierarchy Level: 4

Brief Description:

Control Product Configuration business activity check, determine and direct product configuration change and use.

Extended Description:

Control Product Configuration business activity check, determine and direct product configuration change and use.

Control Product Configuration helps users (customers, business partners etc.) to manage preparation, justification, evaluation, coordination, disposition, and implementation of proposed changes.

Maintain Product Configuration

Process Identifier: 1.2.5.2.3

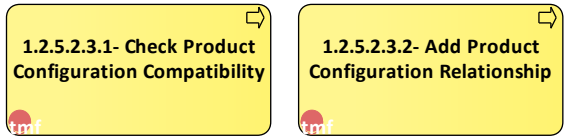
Hierarchy Level: 4

Brief Description:

Maintain Product Configuration business activity handles preserving active product configurations states to support product performance.

Extended Description:

Maintain Product Configuration business activity handles preserving active product configurations states to support product performance.



© TM Forum 2024. All Rights Reserved.

Figure 6: Maintain Product Configuration Children

Check Product Configuration Compatibility

Process Identifier: 1.2.5.2.3.1

Hierarchy Level: 5

Brief Description:

Check Product Configuration Compatibility business activity enables product configuration parameters to be specified that meet products expected behavior and performance.

Extended Description:

Check Product Configuration Compatibility business activity enables product configuration parameters to be specified that meet products expected behavior and performance.

Add Product Configuration Relationship

Process Identifier: 1.2.5.2.3.2

Hierarchy Level: 5

Brief Description:

Add Product Configuration Relationship business activity joins Product Configuration Relationship.

Extended Description:

Add Product Configuration Relationship business activity joins Product Configuration Relationship.

© TM Forum 2024. All Rights Reserved.

Change Product Configuration

Process Identifier: 1.2.5.2.4

Hierarchy Level: 4

Brief Description:

Change Product Configuration business activity handles changes to product configuration.

Extended Description:

Change Product Configuration business activity handles changes to product configuration.

Change Configuration Specification helps to handle modification to a product configuration. This business activity is also responsible for removing / deleting, updating and versioning any product configuration changes.

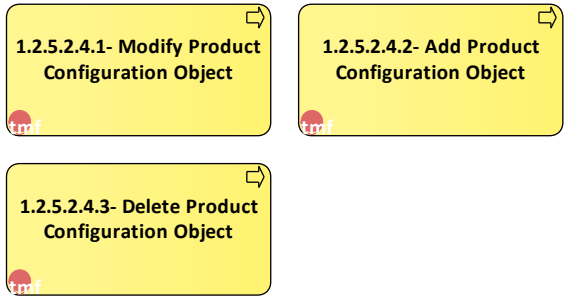


Figure 7: Change Product Configuration Children

Modify Product Configuration Object

Process Identifier: 1.2.5.2.4.1

Hierarchy Level: 5

© TM Forum 2024. All Rights Reserved.

Brief Description:

Modify Product Configuration Object business activity is in charge of altering or amending existing product configuration object.

Extended Description:

Modify Product Configuration Object business activity is in charge of altering or amending existing product configuration object.

Add Product Configuration Object

Process Identifier: 1.2.5.2.4.2

Hierarchy Level: 5

Brief Description:

Add Product Configuration Object business activity is in charge of introducing new product configuration objects.

Extended Description:

Add Product Configuration Object business activity is in charge of introducing new product configuration objects.

Delete Product Configuration Object

Process Identifier: 1.2.5.2.4.3

Hierarchy Level: 5

Brief Description:

Delete Product Configuration Object business activity is in charge of eliminating an existing product configuration object.

Extended Description:

Delete Product Configuration Object business activity is in charge of eliminating an existing product configuration object.

© TM Forum 2024. All Rights Reserved.

Monitor Product Configuration

Process Identifier: 1.2.5.2.5

Hierarchy Level: 4

Brief Description:

Monitor Product Configuration business activity handles monitoring product configurations, changes and/or use.

Extended Description:

Monitor Product Configuration business activity handles monitoring product configurations, changes and/or use.

Report Product Configuration

Process Identifier: 1.2.5.2.6

Hierarchy Level: 4

Brief Description:

Report Product Configuration business activity handles reporting and status accounting of product configuration changes and/or use.

Extended Description:

Report Product Configuration business activity handles reporting and status accounting of product configuration changes and/or use.

Product Configuration Management Plan

Process Identifier: 1.2.5.1

Hierarchy Level: 3

© TM Forum 2024. All Rights Reserved.

Brief Description:

Product Configuration Management Plan business activity anticipate future product configuration changes and establish the product configuration management strategy for managing and auditing product configurations.

Extended Description:

Product Configuration Management Plan business activity anticipate future product configuration changes and establish the product configuration management strategy for managing and auditing product configurations.

The Product Configuration Management Plan business activity helps to identify and create configuration items, support controlling and release of configuration items, define and establish reporting, set courses of action for managing configuration status, establish completeness criteria, defined requirements for managing consistency and correctness of configuration items, and the plans to control storage, handling and delivery of product configuration items.

Develop Product Configuration Policy

Process Identifier: 1.2.5.1.1

Hierarchy Level: 4

Brief Description:

Develop Product Configuration Policy business activity is in charge of defining the product configuration policy that governs the use of a product configuration.

Extended Description:

Develop Product Configuration Policy business activity is in charge of defining the product configuration policy that governs the use of a product configuration.

The Develop Product Configuration Policy will leverage the Enterprise Management Policy process to define specific Product Configuration Management policies that are used to determine the management of product configuration.

© TM Forum 2024. All Rights Reserved.

Establish Product Configuration Management Plan

Process Identifier: 1.2.5.1.2

Hierarchy Level: 4

Brief Description:

Establish Product Configuration Management Plan business activity sets up the course of action that will support managing and auditing product configuration items.

Extended Description:

Establish Product Configuration Management Plan business activity sets up the course of action that will support managing and auditing product configuration items. Establish Product Configuration Management Plan business activity ensure product requirement management are anticipated and understood through well-defined product configuration plans.

Audit Product Configuration

Process Identifier: 1.2.5.3

Hierarchy Level: 3

Brief Description:

Audit Product Configuration business activities examine and verify product configurations for compliance to assurance needs.

Extended Description:

Audit Product Configuration business activities examine and verify product configurations for compliance to assurance needs.

Audit Product Configuration perform audits that compare the "as built" and "as planned" versions of configuration items, investigate discrepancies, and take action on the results. Audit Product Configuration supports Enterprise Audit Management, Enterprise Risk Management and Enterprise Governance.

© TM Forum 2024. All Rights Reserved.

Product Performance Management

Process Identifier: 1.2.6

Hierarchy Level: 2

Brief Description:

Product Performance Management business process manage activities that define and manage product success based on user expectations, user reception, and user satisfaction in line with product design goals (feature set, product reliability, product conformance, product durability, product serviceability, aesthetics, and perceived quality).

Extended Description:

Product Performance Management business process manage activities that define and manage product success based on user expectations, user reception, and user satisfaction in line with product design goals (feature set, product reliability, product conformance, product durability, product serviceability, aesthetics, and perceived quality). Product Performance Objectives (e.g. Profitability, Speediness, Time to market, Product Adoption Rate, Product Revenue, Units Sold, Product Quality, Average Purchase Value, etc.) establish performance goals & targets, track product performance trends, monitor performance, analyze performance, control performance (optimize, troubleshoot), report performance, and manage consequences of performance. Product Performance Management helps product innovation and interworks with Enterprise Performance Management to address competitiveness and Enterprise performance needs. Through Product Performance Management business process, Products are offered and managed to meet the Enterprise Performance Management goals. Product Performance Management address quality, efficiency, productivity, and profitability mandates by identifying and establishing the applicable methodologies that define and manage performance criteria to meet Market & Sales Performance objectives.

Establish Product Performance Goals

Process Identifier: 1.2.6.10

Hierarchy Level: 3

Brief Description:

© TM Forum 2024. All Rights Reserved.

Undertaking proactive monitoring regimes of groups of similar purchased product offerings as required to ensure ongoing performance within agreed parameters over time.

Extended Description:

Undertaking proactive monitoring regimes of groups of similar purchased product offerings as required to ensure ongoing performance within agreed parameters over time.

Determine Product Performance Criteria

Process Identifier: 1.2.6.10.1

Hierarchy Level: 4

Brief Description:

Establishing and managing facilities to inform customers of, and negotiate agreement for, planned service outages.

Extended Description:

Establishing and managing facilities to inform customers of, and negotiate agreement for, planned service outages.

Define Product Performance Plan

Process Identifier: 1.2.6.10.2

Hierarchy Level: 4

Brief Description:

Define Product Performance Plan business activity describe in detail the activities that support accomplishing or meeting product performance objectives/goals.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Define Product Performance Plan business activity describe in detail the activities that support accomplishing or meeting product performance objectives/goals.

Establish Product Performance Objectives

Process Identifier: 1.2.6.10.3

Hierarchy Level: 4

Brief Description:

Establish Product Performance Objectives business activity set up the desired measurable outcome to fulfilling product proposition.

Extended Description:

Establish Product Performance Objectives business activity set up the desired measurable outcome to fulfilling product proposition.

Set Product Performance Targets

Process Identifier: 1.2.6.10.4

Hierarchy Level: 4

Brief Description:

Set Product Performance Targets business activity establish performance management targets.

Extended Description:

Set Product Performance Targets business activity establish performance management targets.

Monitor Product Performance

Process Identifier: 1.2.6.11

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 3

© TM Forum 2024. All Rights Reserved.

Brief Description:

Monitor Product Performance business activity checks and logs product performance.

Extended Description:

Monitor Product Performance business activity checks and logs product performance. Monitor Product Performance relies on performance measures identified for products by their categories and business objectives to support observing and validating performance of products according to intended design or use. Monitor Product Performance measures may include, but not be limited to defined QoS/SLA management processes, problem related concerns, or other associated concerns.

P.S. A product is an offer to a customer.

Determine Product Performance Data Source

Process Identifier: 1.2.6.11.1

Hierarchy Level: 4

Brief Description:

Determine Product Performance Data Source business activity source and identify all relevant data to support product performance management.

Extended Description:

Determine Product Performance Data Source business activity source and identify all relevant data to support product performance management. Determine Product Performance assures the validity, reliability and relevance of data in the computation and tracking of product performance over a product's lifecycle.

Collect Product Performance Data

Process Identifier: 1.2.6.11.2

Hierarchy Level: 4

© TM Forum 2024. All Rights Reserved.

Brief Description:

Collect Product Performance Data business activity gather data according to prescribed data sources.

Extended Description:

Collect Product Performance Data business activity gather data according to prescribed data sources. Product Performance Data may includes all data that impact on the products meeting established performance objectives, including QoS, SLAs and any other form of enumerated qualitative information.

Track Product Performance Measures

Process Identifier: 1.2.6.11.3

Hierarchy Level: 4

Brief Description:

Track Product Performance Measure business activity trace product performance measures to identify trends.

Extended Description:

Track Product Performance Measure business activity trace product performance measures to identify trends. Track Product Performance supports tracking and monitoring of products from customer view points, based on defined measures such as QoS or SLAs, and as well from business view point such as costs etc.

Analyze Product Performance

Process Identifier: 1.2.6.12

Hierarchy Level: 3

Brief Description:

Analyze Product Performance business activity aggregates, provides research findings and product performance reports.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Analyze Product Performance business activity aggregates, provides research findings and product performance reports. Analyze Product Performance includes the collection and strategic evolution of data points (metrics, indicators etc.) related to the purchasing funnel, like how many times visitors view a product page, how many times a product is left abandoned in a cart, how many times a particular product gets to checkout, unique purchases, and more.

Research Product Performance

Process Identifier: 1.2.6.12.1

Hierarchy Level: 4

Brief Description:

Research Product Performance business activity review and investigate product performance concerns.

Extended Description:

Research Product Performance business activity review and investigate product performance concerns. Research Product Performance may leverage case studies etc. to clarify product performance against product performance requirements and to support making a business decision.

Evaluate Product Performance Insights

Process Identifier: 1.2.6.12.2

Hierarchy Level: 4

Brief Description:

Develop Product Performance Insights business activity provide deep understanding on product performance requirements and concerns (such as performance criteria, performance targets, performance hinderance etc.).

© TM Forum 2024. All Rights Reserved.

Extended Description:

Develop Product Performance Insights business activity provide deep understanding on product performance requirements and concerns (such as performance criteria, performance targets, performance hinderance etc.). Develop Product Performance Insights will provide, amongst others, product performance trend Analysis, development sourcing details related to purchased product offers performance and analysis from the product offer inventory (for cases that require assisting the development of trends).

Report Product Performance Analysis

Process Identifier: 1.2.6.12.3

Hierarchy Level: 4

Brief Description:

Report Product Performance Analysis business activity provides detailed account of research findings and outcome of evaluation of product performance.

Extended Description:

Report Product Performance Analysis business activity provides detailed account of research findings and outcome of evaluation of product performance.

Control Product Performance

Process Identifier: 1.2.6.13

Hierarchy Level: 3

Brief Description:

Control Product Performance business activity determine and administer changes and directives the manage product performance accomplishment.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Control Product Performance business activity determine and administer changes and directives the manage product performance accomplishment. Control Product Performance may establish and manage actions that directly or indirectly impact on products, their impact on customers and ultimately their performance in the market.

Report Product Performance

Process Identifier: 1.2.6.14

Hierarchy Level: 3

Brief Description:

Report Product Performance Analysis business activity provides detailed account of research findings and outcome of evaluation of product performance.

Extended Description:

Report Product Performance Analysis business activity provides detailed account of research findings and outcome of evaluation of product performance. Product Performance Analysis reports is created and re-created repeatedly over the lifecycle of each product.

Product Specification & Offering Development & Retirement

Process Identifier: 1.2.7

Hierarchy Level: 2

Brief Description:

Develop and deliver new product specifications as well as enhancements and new features, ready for use by other processes, including Product Offering Development & Retirement.

Develop and deliver new product offerings, their pricing, as well as catalog that contain both.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Product Specification & Offering Development & Retirement processes develop and deliver new product specifications as well as enhancements and new features, ready for use by other processes. Additionally they handle the removal of specifications no longer offered.

Product specifications represent the types of services and resources made available as product offerings to the market by an enterprise.

The key measures of this process are how effectively the enterprise's offerings are broadened by these specifications or new specification features. These processes also manage updates and enhancements to product specifications. Business case development tracking and commitment are key elements of this process.

They also develop new product offerings and their associated features. Pricing for the offerings is also developed, such as standard pricing and feature-based pricing. The offerings and selected processes are included in product catalogs which are also developed by these processes.

© TM Forum 2024. All Rights Reserved.

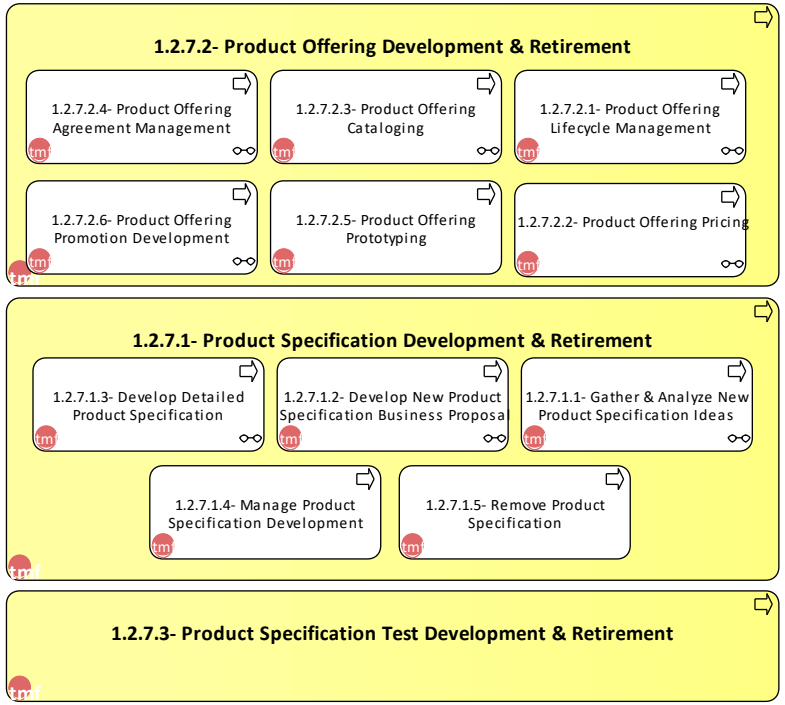

Figure 9: Product Specification & Offering Development & Retirement Children

Product Specification Development & Retirement

Process Identifier: 1.2.7.1

Hierarchy Level: 3

Brief Description:

Develop and deliver new product specifications as well as enhancements and new features, ready for use by other processes, including Product Offering Development & Retirement.

Product Specifications represent the types of services and resources made av

Extended Description:

Product Specification Development & Retirement processes develop and deliver new product specifications as well as enhancements and new features, ready for use by other processes. Additionally they handle the removal of specifications no longer offered. Also, dynamic allocation of resources and services to deliver products to the market. They are responsible

Product specifications represent the types of services and resources made available as product offerings to the market by an enterprise.

The key measures of this process are how effectively the enterprise's offerings are broadened by these specifications or new specification features. These processes also manage updates and enhancements to product specifications. Business case development tracking and commitment are key elements of this process.

Note that this process is reused to support the development of product specifications on-boarded from other parties with whom an enterprises collaborates to deliver value to customers. This is done to remove the redundancy between this process and the Party Offering Development & Retirement process. The focus of the Party Offering Development & Retirement core process is the relationships that product specifications have with other parties.

Also note that some of these processes, such as Gather & Analyze New Product Specification Ideas and Develop New Product Specification Business Proposal, may be performed in conjunction with the equivalent process in Product Offering Development & Retirement. For example, if ideas for a new specification or feature are being developed, ideas on how to offer it to the market may also be gathered; or if a new offering is being considered it may require new features defined for the specification or one or more new specifications to be developed for it.

© TM Forum 2024. All Rights Reserved.

Gather & Analyze New Product Specification Ideas

Process Identifier: 1.2.7.1.1

Hierarchy Level: 4

Brief Description:

Research and analyze demographic, customer, technology and marketing information to identify new product specification opportunities.

Extended Description:

Gather & Analyze New Product Specification Ideas researches and analyzes demographic, customer, technology and marketing information to identify new product specification opportunities that represent a new entrant or enhanced feature(s) to an existing specification that will be introduced to the market as one or more product offerings.

The process undertakes the necessary analysis to identify potential opportunities, compares current capabilities with the identified opportunities, and as a result of the analysis develops new opportunity concepts. Requirements from the sales organization relating to enhancements to support their desired offers are also captured. The concepts include an analysis of the customer value proposition.

Figure 10: Gather & Analyze New Product Specification Ideas Children

© TM Forum 2024. All Rights Reserved.

Gather Product Specification Ideas

Process Identifier: 1.2.7.1.1.1

Hierarchy Level: 5

Brief Description:

Research demographic, customer, technology and marketing information.

Extended Description:

Not used for this process element

Identify Product Specification Opportunities and Requirements

Process Identifier: 1.2.7.1.1.2

Hierarchy Level: 5

Brief Description:

Identify potential opportunities and capture requirements from the sales organization relating to enhancements to support the possible offer(s) based on the specification that may be made available to the market.

Extended Description:

Not used for this process element

Develop New Product Specification Opportunity Concepts

Process Identifier: 1.2.7.1.1.3

Hierarchy Level: 5

© TM Forum 2024. All Rights Reserved.

Brief Description:

Compare current capabilities with the identified product specification opportunities, and as a result of the analysis develop new opportunity concepts. The concepts include an analysis of the customer value proposition.

Extended Description:

Not used for this process element

Develop New Product Specification Business Proposal

Process Identifier: 1.2.7.1.2

Hierarchy Level: 4

Brief Description:

Develop and document business proposals for the identified new product specification concept.

Extended Description:

Develop New Product Specification Business Proposal develops and documents business proposals for the identified new product specification concept (including if necessary a business case). The business proposal (or business case) identifies the new product specification requirements, including the specific service specifications and resource specifications used to realize the product specification.

The business proposal also identifies the development costs and anticipated benefits, including forecast demand, revenue gains, productivity gains, performance improvements and/or operational cost improvements.

In addition, this process defines the attributes of the product specification which form the basis for associated product offering(s)' used for advertising and sales. The business proposal also includes an assessment of the risks and the competitive positioning of the product specification proposal. As a part of the business proposal development a feasibility assessment can be produced.

© TM Forum 2024. All Rights Reserved.

Potential other parties who can assist in the development of the product specification are also identified via interaction with the Determine Potential Parties sub-process within Party Tender Management. As a part of the process, the business proposal is appropriately approved, and as a result of the approval, necessary resources are made available.

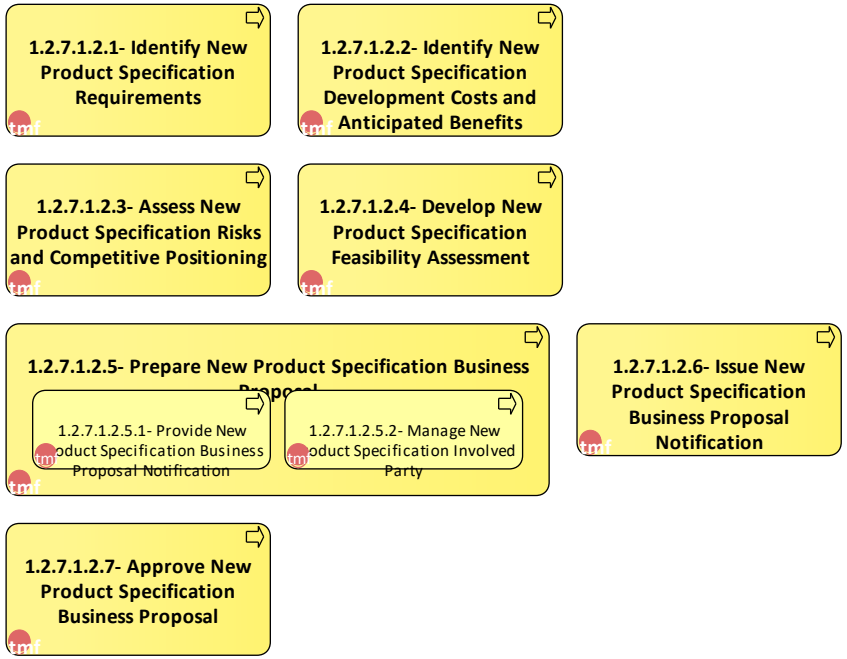

Figure 11: Develop New Product Specification Business Proposal Children

Identify New Product Specification Requirements

Process Identifier: 1.2.7.1.2.1

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 5

Brief Description:

Identify the new product specification requirements, including the proposed service and resource specifications used to realize the product specification.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Not used for this process element

Identify New Product Specification Development Costs and Anticipated Benefits

Process Identifier: 1.2.7.1.2.2

Hierarchy Level: 5

Brief Description:

Identify the development costs and anticipated benefits. This includes forecasted demand, revenue gains, productivity gains, performance improvements, and/or operational cost improvements.

Extended Description:

Identify New Product Specification Development Costs and Anticipated Benefits identifies the development costs and anticipated benefits. This includes forecasted demand, revenue gains, productivity gains, performance improvements, and/or operational cost improvements.

It also defines the proposed attributes of the product specification which form the basis for associated product offering(s) used for advertising and sales.

Assess New Product Specification Risks and Competitive Positioning

Process Identifier: 1.2.7.1.2.3

Hierarchy Level: 5

Brief Description:

Assess the risks and the competitive positioning of the product specification proposal.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Not used for this process element

Develop New Product Specification Feasibility Assessment

Process Identifier: 1.2.7.1.2.4

Hierarchy Level: 5

Brief Description:

Produce new product specification feasibility assessment.

Extended Description:

Not used for this process element

Prepare New Product Specification Business Proposal

Process Identifier: 1.2.7.1.2.5

Hierarchy Level: 5

Brief Description:

Assemble the various components of the new product specification business proposal for issuance to parties involved in the approval of it or other parties involved in this activity.

Extended Description:

Prepare New Product Specification Business Proposal assembles the various components of the new product specification business proposal for issuance to parties involved in the approval of it or other parties involved in this activity.

© TM Forum 2024. All Rights Reserved.

The components are the parts of the proposal that have been developed by other Develop New Product Specification Business Proposal processes, such as Assess New Product Specification Risks and Competitive Positioning.

Provide New Product Specification Business Proposal Notification

Process Identifier: 1.2.7.1.2.5.1

Hierarchy Level: 6

Brief Description:

Issue new product specification business proposal to parties involved in the approval of it or to other parties involved in some way with the approval process.

Extended Description:

Provide New Product Specification Business Proposal Notification issues notifications to parties involved in the approval of it or to other parties involved in some way with the approval process. The parties may be those who approve the proposal or those that are informed about it, and so forth.

It also identifies involved parties to whom notifications should be sent. These parties are specified by the Manage New Product Specification Notification Involved Party process.

Manage New Product Specification Involved Party

Process Identifier: 1.2.7.1.2.5.2

Hierarchy Level: 6

Brief Description:

Track individuals and organizations playing various roles who are involved in some way with the approval of a new product specification business proposal.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Manage New Product Specification Notification Involved Party keeps track of individuals and organizations playing various roles who are involved in some way with the approval of a new product specification business proposal. Included is the type of involvement, such as those responsible for the approval process or those who should be informed about the new product specification business proposal.

This process communicates these, via a process flow, to the applicable Process Management & Support process in the Enterprise domain which maintains the association between parties playing a variety of roles and the processes in which they are involved.

Issue New Product Specification Business Proposal Notification

Process Identifier: 1.2.7.1.2.6

Hierarchy Level: 5

Brief Description:

Send the new product specification business proposal notification to involved parties.

Extended Description:

Not used for this process element

Approve New Product Specification Business Proposal

Process Identifier: 1.2.7.1.2.7

Hierarchy Level: 5

Brief Description:

Approve the new product specification business proposal. As a result of the approval development of the detailed product specification commences.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Not used for this process element

Develop Detailed Product Specification

Process Identifier: 1.2.7.1.3

Hierarchy Level: 4

Brief Description:

Develop and document the detailed product specification-related commercial, technical, performance and operational specifications, and customer manuals.

Extended Description:

Develop Detailed Product Specification develops and documents the detailed product specification-related commercial, technical, performance and operational specifications, and customer manuals. These processes develop and document the required product features, the associated service or resource specifications that represent the realization of the product specification. The specific performance and operational requirements and support activities, and any product specific data required for the service and resource infrastructure. The processes ensure that all detailed specifications are produced and appropriately documented. Additionally the processes ensure that the documentation is captured in an appropriate enterprise repository.

Note: To minimize the number of sub-processes that update and remove various aspects of a product specification, such as features, it is assumed that the "develop" processes also perform updates and removals.

© TM Forum 2024. All Rights Reserved.

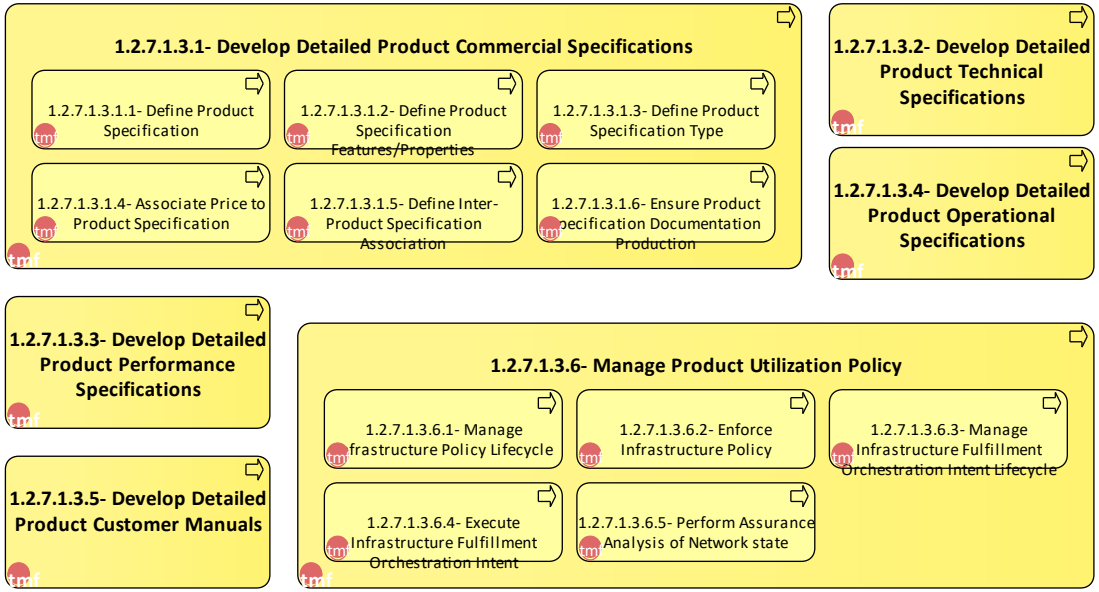

Figure 12: Develop Detailed Product Specification Children

Develop Detailed Product Commercial Specifications

Process Identifier: 1.2.7.1.3.1

Hierarchy Level: 5

Brief Description:

Develop the product specification, develop the required non-configurable product specification features, as well as other commercial aspects of the specification.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Develop Detailed Product Commercial Specifications develops the product specification, which also includes grouping/bundling of specifications and versioning of the specifications. Groups/bundles may include specifications on-boarded from other parties. Required non-configurable features known as characteristics are developed.

The process also associates the specification with one or more product lines and/or product categories. If a product line or category does not exist one is created. Associations to suggested pricing for product offerings based on the specification are also developed.

Associations between and among product specifications are developed. These associations represent business rules, such as migration, substitution, dependency, or exclusivity between and among the specifications.

The process ensures that all detailed specifications are produced and appropriately documented. Additionally the processes ensure that the documentation is captured in an appropriate enterprise repository.

Note: To minimize the number of sub-processes that update and remove various aspects of a product specification, such as groupings and features, it is assumed that the sub-processes also perform updates and removals.

Define Product Specification

Process Identifier: 1.2.7.1.3.1.1

Hierarchy Level: 6

Brief Description:

Develop product specification and groupings and create version information as needed for a product specification.

Extended Description:

Define Product Specification develops the product specification, which also includes grouping/bundling of specifications and versioning of the specifications. Groups/bundles may include specifications on-boarded from other parties. The groups/bundles typically contain product specifications that are always included together and not separately priced.

When necessary version information, such as version number, version date, and a description of the version, are created.

© TM Forum 2024. All Rights Reserved.

Define Product Specification Features/Properties

Process Identifier: 1.2.7.1.3.1.2

Hierarchy Level: 6

Brief Description:

Define non-configurable features known as characteristics for a product specification.

Extended Description:

Define Product Specification Features/Properties defines non-configurable features known as characteristics. For example, the title of a movie or the temperature range for a smart thermometer. Note that configurable features/properties are managed by the Product Configuration Management process and that this process uses a generalized set of processes to create the features/properties. This process focuses on associating them with a product specification.

Features/properties can be shared among product specifications and can also be grouped. For example, a group of environmental properties or a group of technical properties.

Define Product Specification Type

Process Identifier: 1.2.7.1.3.1.3

Hierarchy Level: 6

Brief Description:

Associate the specification with one or more product lines and/or product categories.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Define Product Specification Type associates the specification with one or more product lines and/or product categories, collectively called a product specification type. If a product line or category does not exist one is created.

Associate Price to Product Specification

Process Identifier: 1.2.7.1.3.1.4

Hierarchy Level: 6

Brief Description:

Associate a product specification to suggested pricing for product offerings.

Extended Description:

Associate Price to Product Specification associates a product specification to suggested pricing for product offerings. These prices can be used to assist in determining the price associated with an offering.

Define Inter-Product Specification Association

Process Identifier: 1.2.7.1.3.1.5

Hierarchy Level: 6

Brief Description:

Define associations (relationships) between and among product specifications.

Extended Description:

Define Inter-Product Specification Association defines associations (relationships) between and among product specifications. These associations represent business rules, such as migration, substitution, dependency, or exclusivity between and among the specifications.

© TM Forum 2024. All Rights Reserved.

Ensure Product Specification Documentation Production

Process Identifier: 1.2.7.1.3.1.6

Hierarchy Level: 6

Brief Description:

Ensure that all detailed specifications are produced and appropriately documented.

Extended Description:

Ensure Product Specification Documentation Production ensures that all detailed specifications are produced and appropriately documented. Additionally the processes ensure that the documentation is captured in an appropriate enterprise repository.

Develop Detailed Product Technical Specifications

Process Identifier: 1.2.7.1.3.2

Hierarchy Level: 5

Brief Description:

Develop and document the detailed product-related technical specifications.

Extended Description:

Develop Detailed Product Technical Specifications develops and documents the detailed product-related technical specifications. It associates the specification with the service and resource specifications that represent the realization of the product specification. It ensures that all detailed specifications are produced and appropriately documented. And it ensures that the documentation is captured in an appropriate enterprise repository.

Develop Detailed Product Performance Specifications

Process Identifier: 1.2.7.1.3.3

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 5

Brief Description:

These processes develop and document the detailed product specification-related performance specifications.

© TM Forum 2024. All Rights Reserved.

Extended Description:

These processes develop and document the detailed product specification-related performance specifications.

Performance specifications include the creation of metrics used to measure the performance of individual specifications as well as on or more Key Quality Indicators (KQIs) grouped into service level specifications used for service level agreements. Note, that while this process creates the association to the KQIs, the Develop Service Level Specification process in Service Development & Retirement manages the lifecycle of service level specifications and the KQIs.

The processes ensure that all detailed specifications are produced and appropriately documented. Additionally the processes ensure that the documentation is captured in an appropriate enterprise repository.

Develop Detailed Product Operational Specifications

Process Identifier: 1.2.7.1.3.4

Hierarchy Level: 5

Brief Description:

Develop and document the detailed product-related operational specifications.

Extended Description:

Develop Detailed Product Operational Specifications develops and documents the detailed product-related operational specifications. These processes develop and document the specific operational requirements and support activities, along with any product specific data required for the service and resource infrastructure. The processes ensure that all detailed specifications are produced and appropriately documented. Additionally the processes ensure that the documentation is captured in an appropriate enterprise repository.

© TM Forum 2024. All Rights Reserved.

Develop Detailed Product Customer Manuals

Process Identifier: 1.2.7.1.3.5

Hierarchy Level: 5

Brief Description:

Develop and document the detailed customer manuals.

Extended Description:

Develop Detailed Product Customer Manuals develops and documents the detailed customer manuals. The processes ensure that all detailed specifications are produced and appropriately documented. Additionally the processes ensure that the documentation is captured in an appropriate enterprise repository.

Manage Product Utilization Policy

Process Identifier: 1.2.7.1.3.6

Hierarchy Level: 5

Brief Description:

Not used for this process element.

Extended Description:

Manage Product Utilization Policy is responsible for dynamic allocation of resources and services to deliver products to the market. It imply the existence of guiding processes to provide the rules for these allocations. These policies are managed much like any other product rules, but are intended to constrain real time automatic and AI activity to achieve the intended product performance.

Manage Infrastructure Policy Lifecycle

Process Identifier: 1.2.7.1.3.6.1

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 6

Brief Description:

Not used for this process element.

Extended Description:

Manage Infrastructure Policy Lifecycle is performed in case a policy lifecycle process needs to become established to meet the challenges of a dynamic offering catalogue. This process would verify that the risks of carrying an offer were acceptable and initiate the development and maturation of any policy development activity to close any gaps.

This process is critical when managing virtual infrastructure such as Could resources or slices of virtual networks.

Enforce Infrastructure Policy

Process Identifier: 1.2.7.1.3.6.2

Hierarchy Level: 6

Brief Description:

Not used for this process element.

Extended Description:

Enforce Infrastructure Policy us responsible for the action of applying every identified applicable policy upon the operation of a resource. If the resources are persistent this can be arranged at build time, by if the resources are intermittent then a continuous process needs to guarantee policy adherence.

Manage Infrastructure Fulfillment Orchestration Intent Lifecycle

Process Identifier: 1.2.7.1.3.6.3

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 6

Brief Description:

Not used for this process element.

Extended Description:

Manage Infrastructure Fulfillment Orchestration Intent Lifecycle process ensures that the intents that intermittent orchestration processes provide are managed appropriately by the platform owner. This process needs to be continuous when infrastructure is virtual and the relationships between infrastructure elements are dynamic. (This process can be delivered within the design of persistent offers)

Execute Infrastructure Fulfillment Orchestration Intent

Process Identifier: 1.2.7.1.3.6.4

Hierarchy Level: 6

Brief Description:

Not used for this process element.

Extended Description:

Execute Infrastructure Fulfillment Orchestration Intent is responsible for the action of delivering the outcome of an intent provided by an orchestration process.

Perform Assurance Analysis of Network state

Process Identifier: 1.2.7.1.3.6.5

Hierarchy Level: 6

Brief Description:

© TM Forum 2024. All Rights Reserved.

Not used for this process element.

Extended Description:

Perform Assurance Analysis of Network state is responsible for an asynchronous process to review the state of a network and test that what has been configured is within the boundaries allowed by policies. In a persistent network this process can be executed occasionally as an audit, by a dynamic intermittent network will need constant validation and confirmation.

Manage Product Specification Development

Process Identifier: 1.2.7.1.4

Hierarchy Level: 4

Brief Description:

Ensure the co-coordinated delivery in line with the approved business case of all required product specification capabilities for that business case across the enterprise.

Extended Description:

Manage Product Specification Development ensures the co-coordinated delivery in line with the approved business case of all required product specification capabilities for that business case across the enterprise. These processes may use project management disciplines when a project is created to develop a specification to deliver the necessary capabilities, including process development, specific systems & network infrastructure developments, specific channel developments, specific operational procedures, and so forth. required to support the new product specification.

Note that delivery of a product specification within the context of existing commercial agreements is managed through the Party Offering Development & Retirement process. If new partners are required, the Party Agreement Management process is used to deliver the necessary commercial agreements.

Note that the management of major new or enhanced infrastructure development to support Product & Offer Development is managed within the Product & Offer Capability Delivery process

© TM Forum 2024. All Rights Reserved.

Remove Product Specification

Process Identifier: 1.2.7.1.5

Hierarchy Level: 4

Brief Description:

Remove a product specification, either by deleting it or indicating it is no longer valid.

Extended Description:

Remove Product Specification removes a product specification, either by deleting it or indicating it is no longer valid. When all associated Product Offerings have been deemed no longer viable and there are no Product Offerings planned the Product Specification is removed. Notifications are sent to Service Development & Retirement and Resource Development and Retirement processes so that they can determine if the associated service and resource specifications should also be removed. Additionally a notification may be sent to the Party Offering Development & Retirement process so that it can determine if any on-boarded specifications should also be removed.

Product Offering Development & Retirement

Process Identifier: 1.2.7.2

Hierarchy Level: 3

Brief Description:

Develop and deliver new product offerings, their pricing, as well as catalogs that contain both.

Extended Description:

Product Offering Development & Retirement develops new product offerings and their associated features. Pricing for the offerings is also developed, such as standard pricing and feature-based pricing. The offerings and selected processes are included in product catalogs which are also developed by these processes.

© TM Forum 2024. All Rights Reserved.

Note that this process is reused to support the development of product offerings on-boarded from other parties with whom an enterprises collaborates to deliver value to customers. This is done to remove the redundancy between this process and the Party Offering Development & Retirement process. The focus of the Party Offering Development & Retirement core process is the relationships that product offerings have with other parties.

Product Offering Lifecycle Management

Process Identifier: 1.2.7.2.1

Hierarchy Level: 4

Brief Description:

Develop and deliver new product offerings as well as enhancements to existing offerings and new features, ready for use by other processes. Offerings may represent new entrants into the market that are based on new product specifications. The processes develop various pricing models for offerings and catalogs that contain the offerings. Additionally the processes handle the exit of offerings from the market.

Product offerings represent the types of services and resources made available to the market by an enterprise.

Extended Description:

Product Offering Lifecycle Management develops and delivers new product offerings as well as enhancements to existing offerings and new features, ready for use by other processes. Offerings may represent new entrants into the market that are based on new product specifications. The processes develop various pricing models for offerings and catalogs that contain the offerings. Additionally the processes handle the exit of offerings from the market.

Product offerings represent the types of services and resources made available to the market by an enterprise.

© TM Forum 2024. All Rights Reserved.

The key measures of this process are how effectively the enterprise's offerings are broadened by these offerings or new offering features. These processes also manage updates and enhancements to product offerings. Business case development tracking and commitment are key elements of this process.

Note that some of these processes, such as Gather New Product Offering Ideas and Develop New Product Offering Business Proposal, may be performed in conjunction with the equivalent process in Product Specification Development & Retirement. For example, if ideas for a new specification or feature are being developed ideas on how to offer it to the market may also be gathered; or if a new offering is being considered it may require new features defined for the specification or one or more new specifications to be developed for it.

Figure 13: Product Offering Lifecycle Management Children

Gather & Analyze New Product Offering Ideas

Process Identifier: 1.2.7.2.1.1

Hierarchy Level: 5

Brief Description:

Research and analyze demographic, customer, technology and marketing information to identify new product offering opportunities.

Extended Description:

Gather & Analyze New Product Offering Ideas researches and analyzes demographic, customer, technology and marketing information to identify new product offering opportunities such as a new entrant (based on an existing product specification or a new product specification), enhanced feature(s) to an existing offering, or a new bundle of offerings, that will be introduced to the market.

These processes undertake the necessary analysis to identify potential opportunities, compare current capabilities with the identified opportunities, and as a result of the analysis develop new opportunity concepts. Requirements from the sales organization relating to enhancements to support their desired offers are also captured by these processes. The concepts include an analysis of the customer value proposition.

Gather Product Offering Ideas

Process Identifier: 1.2.7.2.1.1.1

Hierarchy Level: 6

Brief Description:

Research demographic, customer, technology and marketing information.

Develop New Product Offering Business Proposal

Process Identifier: 1.2.7.2.1.2

Hierarchy Level: 5

Brief Description:

Develop and document business proposals for the identified new product offering concept.

Extended Description:

Develop New Product Offering Business Proposal develops and documents business proposals for the identified new product offering concept (including if necessary a business case). The business proposal (or business case) identifies the new product offering requirements, including the possible sales channels that will deliver the offerings to customers and locations for which the offering is available.

The business proposal also identifies the development costs and anticipated benefits, including forecast demand, revenue gains, productivity gains, performance improvements and/or operational cost improvements.

In addition, these processes define the attributes specific to product offering, as defined by the associated product specification, and used for advertising and sales. The business proposal also includes an assessment of the risks and the competitive positioning of the product offering proposal. As a part of the business proposal development a feasibility assessment can be produced.

Potential other parties who can assist in the development of the product offering are also identified via interaction with the Determine Potential Parties sub-process within Party Tender Management. As a part of the process, the business proposal is appropriately approved, and as a result of the approval, necessary resources are made available.

Identify New Product Offering Requirements

Process Identifier: 1.2.7.2.1.2.1

Hierarchy Level: 6

Brief Description:

© TM Forum 2024. All Rights Reserved.

Identify the new product offering requirements, including the possible sales channels that will deliver the offerings to customers and locations for which the offering is available.

Extended Description:

Not used for this process element

Identify New Product Offering Development Costs and Anticipated Benefits

Process Identifier: 1.2.7.2.1.2.2

Hierarchy Level: 6

Brief Description:

Identify the development costs and anticipated benefits. This includes forecasted demand, revenue gains, productivity gains, performance improvements, and/or operational cost improvements.

Extended Description:

Identify New Product Offering Development Costs and Anticipated Benefits identifies the development costs and anticipated benefits. This includes forecasted demand, revenue gains, productivity gains, performance improvements, and/or operational cost improvements.

It also defines the proposed attributes specific to the product offering based on those for the associated product specification and used for advertising and sales.

Assess New Product Offering Risks and Competitive Positioning

Process Identifier: 1.2.7.2.1.2.3

Hierarchy Level: 6

Brief Description:

© TM Forum 2024. All Rights Reserved.

Assess the risks and the competitive positioning of the product offering proposal.

Extended Description:

Not used for this process element

Develop New Product Offering Feasibility Assessment

Process Identifier: 1.2.7.2.1.2.4

Hierarchy Level: 6

Brief Description:

Produce new product offering feasibility assessment.

Extended Description:

Not used for this process element

Prepare New Product Offering Business Proposal

Process Identifier: 1.2.7.2.1.2.5

Hierarchy Level: 6

Brief Description:

Assemble the various components of the new product offering business proposal for issuance to parties involved in the approval of it or other parties involved in this activity.

Extended Description:

Prepare New Product Offering Business Proposal assembles the various components of the new product offering business proposal for issuance to parties involved in the approval of it or other parties involved in this activity.

© TM Forum 2024. All Rights Reserved.

The components are the parts of the proposal that have been developed by other Develop New Product Offering Business Proposal processes, such as Assess New Product Offering Risks and Competitive Positioning.

© TM Forum 2024. All Rights Reserved.

Provide New Product Offering Business Proposal Notification

Process Identifier: 1.2.7.2.1.2.6

Hierarchy Level: 6

Brief Description:

Issue a new product offering business proposal to parties involved in the approval of it or to other parties involved in some way with the approval process.

Extended Description:

Provide New Product Offering Business Proposal Notification issues notifications to parties involved in the approval of it or to other parties involved in some way with the approval process. The parties may be those who approve the proposal or those that are informed about it, and so forth.

It also identifies involved parties to whom notifications should be sent. These parties are specified by the Manage New Product Offering Notification Involved Party process.

Issue New Product Offering Business Proposal Notification

Process Identifier: 1.2.7.2.1.2.6.2

Hierarchy Level: 7

Brief Description:

Send the new product offering business proposal notification to involved parties.

Extended Description:

Not used for this process element

© TM Forum 2024. All Rights Reserved.

Manage New Product Offering Involved Party

Process Identifier: 1.2.7.2.1.2.6.1

Hierarchy Level: 7

Brief Description:

Track individuals and organizations playing various roles who are involved in some way with the approval of a new product offering business proposal.

Extended Description:

Manage New Product Offering Notification Involved Party keeps track of individuals and organizations playing various roles who are involved in some way with the approval of a new product offering business proposal. Included is the type of involvement, such as those responsible for the approval process or those who should be informed about the new product offering business proposal.

This process communicates these, via a process flow, to the applicable Process Management & Support process in the Enterprise domain which maintains the association between parties playing a variety of roles and the processes in which they are involved.

Approve New Product Offering Business Proposal

Process Identifier: 1.2.7.2.1.2.7

Hierarchy Level: 6

Brief Description:

Approve the new product offering business proposal. As a result of the approval development of the detailed product offering commences.

Extended Description:

Not used for this process element

© TM Forum 2024. All Rights Reserved.

Develop Detailed Product Offering

Process Identifier: 1.2.7.2.1.3

Hierarchy Level: 5

Brief Description:

Develop and document the detailed product offering, and its related commercial and performance specifications.

Extended Description:

Develop Detailed Product Offering develops and documents the detailed product offering-related commercial and performance specifications. These processes develop and document the features specific to an offering as defined by the associated product specification. The processes ensure that all detailed offerings are produced and appropriately documented. Additionally the processes ensure that the documentation is captured in an appropriate enterprise repository.

Note: To minimize the number of sub-processes that update and remove various aspects of a product offering, such as features and associated sales channels and locations, it is assumed that the "develop" processes also perform updates and removals.

Develop Detailed Product Offering Commercial Specifications

Process Identifier: 1.2.7.2.1.3.1

Hierarchy Level: 6

Brief Description:

Develop the product offering, associate applicable features defined for its associated product specification and/or product configuration specification, as well as other commercial aspects of the specification.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Develop Detailed Product Offering Commercial Specifications develops the product offering, which includes the development of bundled offerings. Bundles may include offerings on-boarded from other parties. Applicable features known as characteristics defined from the associated product specification and/or product configuration specification are associated to the product offering.

Prices, developed by the Product Offering Pricing core process, are associated to the product offering.

Associations between and among product offerings are developed. These associations represent business rules, such as migration, substitution, dependency, or exclusivity between and among the offerings.

Associations with sales channels, market segments, and locations. Other entities are defined.

The processes ensure that all detailed commercial specifications for the offering are produced and appropriately documented. Additionally the processes ensure that the documentation is captured in an appropriate enterprise repository.

Define Product Offering

Process Identifier: 1.2.7.2.1.3.1.1

Hierarchy Level: 7

Brief Description:

Develop product offering, including bundles.

Extended Description:

Define Product Offering develops the product offering, which also includes a bundled offering and the number of offerings allowable to be chosen as part of the bundle. Bundles may include offerings on-boarded from other parties.

Define Product Offering Features/Properties

Process Identifier: 1.2.7.2.1.3.1.2

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 7

Brief Description:

Associate features, known as characteristics, to an offering.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Define Product Offering Features/Properties associates features/properties known as characteristics to an offering. These features/properties are defined for the associated product specification and/or product configuration specification. For example, the format of a movie may determine the price for the offering.

Associate Price to Product Offering

Process Identifier: 1.2.7.2.1.3.1.3

Hierarchy Level: 7

Brief Description:

Associate a product offering to a product offering price.

Extended Description:

Associate Price to Product Offering associates a product offering to product offering price. Prices are developed by Product Offering Pricing.

Define Inter-Product Offering Association

Process Identifier: 1.2.7.2.1.3.1.4

Hierarchy Level: 7

Brief Description:

Define associations (relationships) between and among product offerings.

Extended Description:

Define Inter-Product Offering Association defines associations (relationships) between and among product offerings. These associations represent business rules, such as migration, substitution, dependency, or exclusivity between and among the offerings.

© TM Forum 2024. All Rights Reserved.

Define Product Offering Associations

Process Identifier: 1.2.7.2.1.3.1.5

Hierarchy Level: 7

Brief Description:

Associate a product offering with other entities, such as ales channels, market segments, and locations.

Extended Description:

Not used for this process element

Ensure Product Offering Documentation Production

Process Identifier: 1.2.7.2.1.3.1.6

Hierarchy Level: 7

Brief Description:

Ensure that all detailed commercial specifications for a product offering are produced and appropriately documented.

Extended Description:

Ensure Product Offering Documentation Production ensures that all detailed specifications are produced and appropriately documented for a product offering. Additionally the processes ensure that the documentation is captured in an appropriate enterprise repository.

Develop Detailed Product Offering Performance Specifications

Process Identifier: 1.2.7.2.1.3.2

Hierarchy Level: 6

© TM Forum 2024. All Rights Reserved.

Brief Description:

Develop and document the detailed product offering-related performance specifications.

Extended Description:

Develop Detailed Product Offering Performance Specifications develops and documents the detailed product offering-related performance specifications.

Performance specifications include the creation of metrics used to measure the performance of individual offerings as well as on or more Key Quality Indicators (KQIs) grouped into service level specifications used for service level agreements. Note, that while this process creates the association to the KQIs, the Develop Service Level Specification process in Service Development & Retirement manages the lifecycle of service level specifications and the KQIs.

The processes ensure that all detailed specifications are produced and appropriately documented. Additionally the processes ensure that the documentation is captured in an appropriate enterprise repository.

Conduct Product Offering Acceptance Testing

Process Identifier: 1.2.7.2.1.4

Hierarchy Level: 5

Brief Description:

Conduct acceptance testing of new and enhanced products in preparation for launch/rollout to the market.

Extended Description:

Conduct Product Offering Acceptance Testing manages acceptance testing of a new and enhanced product offering into the market and handover for ongoing rollout. Acceptance testing is conducted using commercial pilots or market trials of the offering or prototypes of it, in which case the commercial negotiations for the pilot and/or trial are managed through these processes. These processes identify the shortcomings or issues, and manage the necessary improvements to the product offering to allow full rollout. At the conclusion of the pilots and/or trials when the product offering passes its acceptance tests or defined acceptance criteria the offering is ready for launch/rollout to the market.

© TM Forum 2024. All Rights Reserved.

Manage Product Offering Acceptance Testing

Process Identifier: 1.2.7.2.1.4.1

Hierarchy Level: 6

Brief Description:

Manage the introduction of a new product offering using commercial pilots and/or market trials.

Extended Description:

Manage Product Offering Acceptance Testing manages the introduction of a new product offering using commercial pilots and/or market trials of the offering or prototypes of it. Define acceptance tests and/or acceptance criteria. Identify participants (individuals/organizations) that will participate in the testing.

Define Product Offering Acceptance Test

Process Identifier: 1.2.7.2.1.4.1.1

Hierarchy Level: 7

Brief Description:

Define product offering acceptance tests and acceptance criteria.

Extended Description:

Assess Performance of Existing Product Offering

Process Identifier: 1.2.7.2.1.5

Hierarchy Level: 5

© TM Forum 2024. All Rights Reserved.

© TM Forum 2024. All Rights Reserved.

Brief Description:

Analyze the performance of an existing product offering to identify inadequacies and required improvements.

Extended Description:

Assess Performance of Existing Product Offering analyzes the performance of an existing product offering to identify inadequacies and required improvements. The process uses information from customers and from operational activities to identify required improvements.

Required improvements may involve those to a product specification upon which the offering is based. In this case the improvements are communicated to the Develop Detailed Product Specification process.

Manage Product Offering Exit

Process Identifier: 1.2.7.2.1.6

Hierarchy Level: 5

Brief Description:

Identify an existing product offering which is unviable and manage the processes to exit it from the market.

Extended Description:

Manage Product Offering Exit identifies an existing product offering which is unviable and manages the process to exit it from the market. It analyzes an existing product offering to identify if it is economically or strategically, identify customers impacted by any exit, develop customer specific or market segment exit or migration strategies, develop infrastructure transition and/or replacement strategies, and manage the operational aspects of the exit process. A business proposal identifying the competitive threats, risks and costs may be required as part of developing the exit strategy. It includes any interaction with cross-enterprise co-ordination and management functions to ensure that the needs of all stakeholders are identified and managed.

Identify Unviable Product Offering

Analyze an existing product offering to identify if it is economically or strategically unviable.

Extended Description:

Not used for this process element

Identify Product Offering Exit Impact

Process Identifier: 1.2.7.2.1.6.2

Hierarchy Level: 6

Brief Description:

Identify the impact of the exit of the product offering.

Extended Description:

Identify Product Offering Exit Impact identifies customers impacted by any exit, and develop customer specific or market segment exit or migration strategies.

Develop Product Offering Exit Strategies

Process Identifier: 1.2.7.2.1.6.3

Hierarchy Level: 6

Brief Description:

Develop infrastructure transition and/or replacement strategies.

© TM Forum 2024. All Rights Reserved.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Develop Product Offering Exit Strategies develops infrastructure transition and/or replacement strategies, and manage the operational aspects of the exit process. A business proposal identifying the competitive threats, risks and costs may be required as part of developing the exit strategy. It includes any interaction with cross-enterprise co-ordination and management functions to ensure that the needs of all stakeholders are identified and managed.

Exit Product Offering from Market

Process Identifier: 1.2.7.2.1.6.4

Hierarchy Level: 6

Brief Description:

Remove a product offering, either by deleting it or indicating it is no longer valid.

Extended Description:

Exit Product Offering from Market removes a product specification, either by deleting it or indicating it is no longer valid. Notifications are sent to the Product Specification Development & Retirement process so it can determine if the related specifications should also be removed. Additionally a notification may be sent to the Party Offering Development & Retirement process so that it can determine if any on-boarded product offerings should also be removed.

Rollout/Launch Product Offering

Process Identifier: 1.2.7.2.1.7

Hierarchy Level: 5

Brief Description:

Support the operational introduction of new processes and infrastructure to support a new or enhanced product offering and conduct operations readiness testing and acceptance.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Rollout/Launch Product Offering supports the operational introduction of new processes and infrastructure to support a new or enhanced product offering and are responsible for conducting operations readiness testing and acceptance. It develops the procedures for the specific fulfillment, assurance and revenue generation processes and keeps them up to date. After successful testing, accept the new or enhanced process capabilities and manage a full-scale introduction for general availability.

Develop policy support and decision support knowledge for a product offering.

Develop Product Offering Procedures

Process Identifier: 1.2.7.2.1.7.1

Hierarchy Level: 6

Brief Description:

Develop the procedures for the specific fulfillment, assurance and revenue generation processes for a new or enhanced product offering.

Extended Description:

Develop Product Offering Procedures develops the procedures for the specific fulfillment, assurance and revenue generation processes for a new or enhanced product offering as well as keeping them up to date.

Develop policy support and decision support knowledge for these product offering processes and procedures.

Support Product Offering Operational Introduction

Process Identifier: 1.2.7.2.1.7.2

Hierarchy Level: 6

Brief Description:

Support the operational introduction of new processes and infrastructure for a new or enhanced product offering.

© TM Forum 2024. All Rights Reserved.

Accept Product Offering Process Capabilities

Process Identifier: 1.2.7.2.1.7.4

Hierarchy Level: 6

Brief Description:

Accept the new or enhanced process capabilities and manage a full-scale introduction for general availability.

Extended Description:

Not used for this process element

Manage Product Offering Development

Process Identifier: 1.2.7.2.1.8

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 5

Brief Description:

Ensure the co-coordinated delivery in line with the approved business case of all required product offering capabilities for that business case across the enterprise.

Extended Description:

Manage Product Offering Development ensures the co-coordinated delivery in line with the approved business case of all required product offering capabilities for that business case across the enterprise. These processes may use project management disciplines when a project is created to develop a new product offering to deliver the necessary capabilities, including process development, specific systems & network infrastructure developments, specific channel developments, specific operational procedures, and so forth. required to support the new product offering.

Note that delivery of a product offering within the context of existing commercial agreements is managed through the Party Offering Development & Retirement process. If new partners are required, the Party Agreement Management process is used to deliver the necessary commercial agreements.

Note that the management of major new or enhanced infrastructure development to support Product & Offer Development is managed within the Product & Offer Capability Delivery process

Product Offering Pricing

Process Identifier: 1.2.7.2.2

Hierarchy Level: 4

Brief Description:

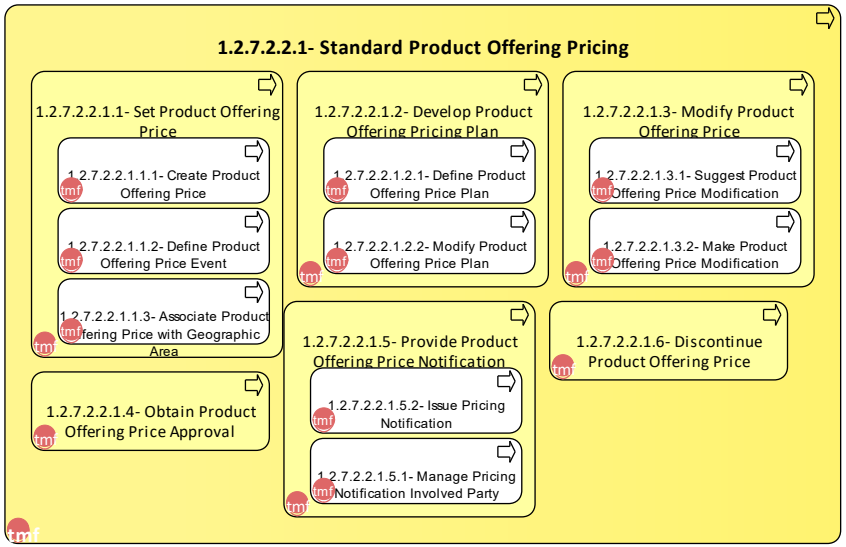
Manage the lifecycle of standard pricing, policy-based pricing, algorithmic pricing, and feature/property-based pricing associated with product offering.

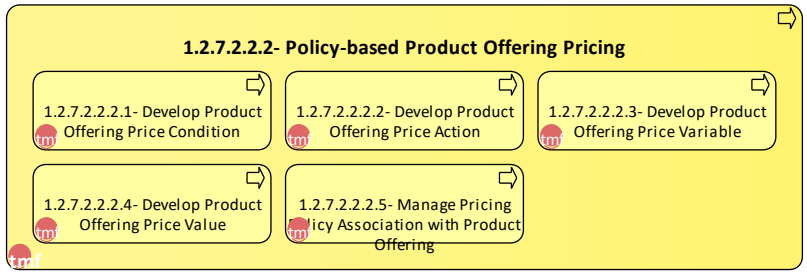
Extended Description:

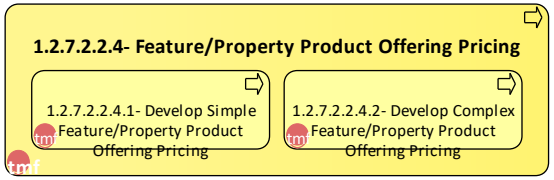
© TM Forum 2024. All Rights Reserved.

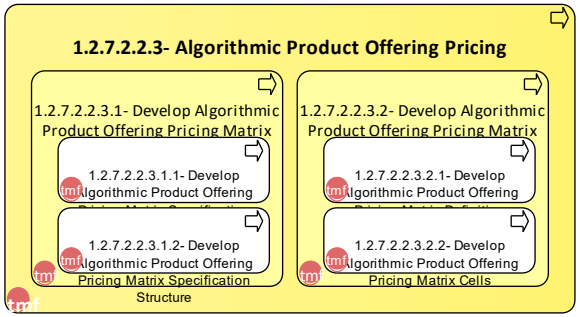
Product Offering Pricing manages all aspects of pricing for product offerings. This includes standard pricing, policy-based pricing, algorithmic pricing, and feature/property-based pricing. Standard pricing processes set the price, develop pricing plans, update prices, obtain approval for pricing, provide notifications of price changes, and remove prices.

The other types of prices define various forms of rules that determine what price should be used under certain conditions. For example, policy-based pricing may determine if a customer qualifies for a discount based on what product offerings are ordered, algorithmic pricing defines matrices of properties/features used to determine a price, feature/property-based pricing determines a price based on the selection of one or more properties or features by a customer.









© TM Forum 2024. All Rights Reserved.

Figure 14: Product Offering Pricing Children

Standard Product Offering Pricing

Process Identifier: 1.2.7.2.2.1

Hierarchy Level: 5

Brief Description:

Set the price, develop pricing plans, update prices, obtain price approval, provide notifications of price changes, and remove prices.

Extended Description:

Standard Product Offering Pricing sets the price, develops pricing plans, updates prices, obtains price approval, provides notifications of price changes, and removes prices.

Prices are set for a variety of prices such as recurring, non-recurring, discounts, allowances. Pricing plans represent groupings of product offering prices, such as a plan composed of a recurring charge and a number of usage based charges. New, updated, and discontinued prices can go through an approval process if needed and notifications of them can be provided to internal and/or external parties such as customers and/or partners. Once a price lives its useful life it can be removed.

Note that the notification and approval processes can be reused by the other pricing related core processes for any additions, modifications, or removals associated with other types of prices whose lifecycles are managed by the other core processes into which the Product Offering Pricing process decomposes.

Set Product Offering Price

Process Identifier: 1.2.7.2.2.1.1

Hierarchy Level: 6

Brief Description:

© TM Forum 2024. All Rights Reserved.

Set (create) a variety of prices such as recurring, non-recurring, discounts, allowances.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Set Product Offering Price sets (creates) a variety of prices such as recurring, non-recurring, discounts, allowances.

Price events that trigger a price are also defined by creating an event and associating it with a price. Additionally, the applicability of a price to one or more geographic areas are defined.

Create Product Offering Price

Process Identifier: 1.2.7.2.2.1.1.1

Hierarchy Level: 7

Brief Description:

Set (create) a variety of prices such as recurring, non-recurring, discounts, allowances.

Extended Description:

Not used for this process element

Define Product Offering Price Event

Process Identifier: 1.2.7.2.2.1.1.2

Hierarchy Level: 7

Brief Description:

These processes define price events that trigger a price and associate it with a price. These events are used to trigger such things the generation of charges associated with recurring prices.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Associate Product Offering Price with Geographic Area

Process Identifier: 1.2.7.2.2.1.1.3

Hierarchy Level: 7

Brief Description:

These processes associate a product offering price with one or more geographic areas to which it applies.

Extended Description:

Not used for this process element

Develop Product Offering Pricing Plan

Process Identifier: 1.2.7.2.2.1.2

Hierarchy Level: 6

Brief Description:

Create and modify a group of product offering prices that represent a price plan for a product offering. Other processes provide notifications and approve the creation and updates.

Extended Description:

Develop Product Offering Price Plan creates and modifies a grouping of product offering prices that represent a price plan for a product offering. For example a plan may consist of a recurring charge for a data plan and a charge for excess data usage.

© TM Forum 2024. All Rights Reserved.

Modification of the plan may include removing and adding product offering prices to the plan.

These processes interact with the Provide Product Offering Price Notification and Obtain Product Offering Price Approval processes to provide notifications of suggested new and changed price plans to parties who approve or are involved in some way, obtain approval to make them, then create or update the price. Once created or changed, notifications are sent to all involved parties, such as approvers, those consulted, and other involved parties.

Define Product Offering Price Plan

Process Identifier: 1.2.7.2.2.1.2.1

Hierarchy Level: 7

Brief Description:

Create a group of product offering prices that represent a price plan for a product offering.

Extended Description:

Define Product Offering Price Plan creates a grouping of product offering prices that represent a price plan for a product offering. For example a plan may consist of a recurring charge for a data plan and a charge for excess data usage.

Modify Product Offering Price Plan

Process Identifier: 1.2.7.2.2.1.2.2

Hierarchy Level: 7

Brief Description:

Modify a group of product offering prices that represent a price plan for a product offering.

Extended Description:

Modify Product Offering Price Plan modifies a grouping of product offering prices that represent a price plan for a product offering. Included are the removal and addition of product offering prices to the plan.

© TM Forum 2024. All Rights Reserved.

Modify Product Offering Price

Process Identifier: 1.2.7.2.2.1.3

Hierarchy Level: 6

Brief Description:

Suggest an update to a product offering price and upon approval make the update. Other processes provide notifications and approve the updates.

Extended Description:

Modify Product Offering Price suggests a change to a product offering price plan.

It interacts with the Provide Product Offering Price Notification and Obtain Product Offering Price Approval processes to provide notifications of suggested changes to parties who approve changes or have some other level of involvement, obtain approval to make the changes, and make the changes. Once changed, notifications are sent to all involved parties, such as approvers, those consulted about the changes, and other involved parties.

Suggest Product Offering Price Modification

Process Identifier: 1.2.7.2.2.1.3.1

Hierarchy Level: 7

Brief Description:

Suggest an update to a product offering price.

Extended Description:

Not used for this process element

© TM Forum 2024. All Rights Reserved.

Make Product Offering Price Modification

Process Identifier: 1.2.7.2.2.1.3.2

Hierarchy Level: 7

Brief Description:

Make an update to a product offering price once the modification is approved.

Extended Description:

Not used for this process element

Obtain Product Offering Price Approval

Process Identifier: 1.2.7.2.2.1.4

Hierarchy Level: 6

Brief Description:

Approve all creations, modifications, and removals of product offering prices and price plans.

Extended Description:

Obtain Product Offering Price Approval handles the approval of the creates, modifications, removals/discontinues to prices and price plans by those parties involved in the approval process. This includes any actions taken by any pricing related core processes.

Additionally enterprise cross-product pricing approval is also obtained.

Upon approval the Provide Product Offering Price Notification process provides notification of the approval to all involved parties.

Provide Product Offering Price Notification

Process Identifier: 1.2.7.2.2.1.5

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 6

© TM Forum 2024. All Rights Reserved.

Brief Description:

Issue pricing related notifications to involved parties.

Extended Description:

Provide Product Offering Price Notification issues notifications to involved parties of any new and change and discontinued product offering prices. Notifications are also made for any creates, changes, deletes made by other pricing related core processes.

It also identifies involved parties to whom notifications should be sent. These parties have been specified by the Manage Pricing Notification Involved Party process.

Issue Pricing Notification

Process Identifier: 1.2.7.2.2.1.5.2

Hierarchy Level: 7

Brief Description:

Send pricing related notifications to involved parties.

Extended Description:

Not used for this process element

Manage Pricing Notification Involved Party

Process Identifier: 1.2.7.2.2.1.5.1

Hierarchy Level: 7

Brief Description:

Track individuals and organizations playing various roles who are involved in some way with product offering prices.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Manage Pricing Notification Involved Party keeps track of individuals and organizations playing various roles who are involved in some way with product offering prices. Included is the type of involvement, such as those responsible for the approval process or those who should be informed about any pricing related activities.

This process communicates these, via a process flow, to the applicable Process Management & Support process in the Enterprise domain which maintains the association between parties playing a variety of roles and the processes in which they are involved.

Discontinue Product Offering Price

Process Identifier: 1.2.7.2.2.1.6

Hierarchy Level: 6

Brief Description:

Discontinue a product offering price including a price plan.

Extended Description:

Discontinue Product Offering Price discontinues a product offering price including a price plan. Discontinue may remove the price or plan or indicate that the price or plan is no longer valid.

It interacts with the Provide Product Offering Price Notification and Obtain Product Offering Price Approval processes to provide notifications of the discontinued price or plan to parties who are responsible for the approval of the discontinuance or have some other level of involvement, obtain approval to discontinue, and discontinue the price or plan. Once discontinued, notifications are sent to all involved parties, such as approvers, those consulted about the discontinuance, and other involved parties.

© TM Forum 2024. All Rights Reserved.

Policy-based Product Offering Pricing

Process Identifier: 1.2.7.2.2.2

Hierarchy Level: 5

Brief Description:

Develop product offering pricing specific policy components used to determine the price of a product offering and to define cross-offering price policy rules.

Extended Description:

Policy-based Product Offering Pricing develops product offering pricing specific policy components used to determine the price of a product offering and to define cross-offering price policy rules. This process develops pricing specific product offering price policy conditions, actions, variables and values.

The price of a product is often dependent upon the procurement of another product for a particular price, another product offering, or another product offering of the same type. For example, if a premium software package is purchased then two from a choice of five other software packages are provided free.

As with other pricing processes this process interacts with the Provide Product Offering Price Notification and Obtain Product Offering Price Approval processes to provide notifications and gain approval of any actions taken by this process.

Note that this process is meant to use generic policy processes to define the base policy. These processes represent product offering pricing specific extensions to them. To date the generic processes have not yet been developed.

Develop Product Offering Price Condition

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 6

Brief Description:

Develop a product offering price condition that represents a single constraint that defines how a policy rule is assessed.

Extended Description:

Develop Product Offering Price Condition develops (creates, updates, and removes) a product offering price condition that represents a single constraint that defines how a policy rule is assessment.

A condition is part of a policy rule that is made up of a conditions and actions. Conditions and actions are defined by policy statements. For example a statement for a condition may be "If a premium software package is purchased".

Develop Product Offering Price Action

Process Identifier: 1.2.7.2.2.2.2

Hierarchy Level: 6

Brief Description:

Develop a product offering price action that represents the outcome of the successful evaluation of one or more policy conditions.

Extended Description:

Develop Product Offering Price Action develops (creates, updates, and removes) a product offering price action that represents the outcome of the successful evaluation of one or more policy conditions.

An action is part of a policy rule that is made up of a conditions and actions. Conditions and actions are defined by policy statements. For example a statement for an action may be "get two software packages from a choice of five for free".

© TM Forum 2024. All Rights Reserved.

Develop Product Offering Price Variable

Process Identifier: 1.2.7.2.2.2.3

Hierarchy Level: 6

Brief Description:

Develop a product offering price variable that represents a product offering, product offering price, or product specification type.

Extended Description:

Develop Product Offering Price Variable develops (creates, updates, and removes) a product offering price variable that represents a product offering, product offering price, or product specification type.

A variable is part of a policy that can be used to form a policy statement. The variable specifies an attribute or concept that should either be matched or in some way compared to a value when a condition is evaluated or set to some value when an action is taken. For example, "get two of five software packages".

If some cases the variables value is determined via the use of a derivation algorithm.

Develop Product Offering Price Value

Process Identifier: 1.2.7.2.2.2.4

Hierarchy Level: 6

Brief Description:

Develop a product offering price value that represents amount expressed in money or another medium of exchange for a product offering.

Extended Description:

Develop Product Offering Price Value develops (creates, updates, and removes) a product offering price value that represents amount expressed in money or another medium of exchange for a product offering.

© TM Forum 2024. All Rights Reserved.

A value is part of a policy that can be used to form a policy statement. The value specifies an attribute that should either be set or cleared (if used in a policy action) or matched or compared in some way to a value of the policy variable in a policy condition. For example "get the two software packages for free (a zero price)".

Manage Pricing Policy Association with Product Offering

Process Identifier: 1.2.7.2.2.2.5

Hierarchy Level: 6

Brief Description:

Create and remove the association between a product offering and the policy which governs pricing.

Extended Description:

Not used for this process element

Algorithmic Product Offering Pricing

Process Identifier: 1.2.7.2.2.3

Hierarchy Level: 5

Brief Description:

Develop a product offering pricing algorithmic matrix specification and the content of the matrix. The matrix is used to determine the price to charge/allow for a product that meet the criteria in the matrix, particularly for variable charges/allowances.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Algorithmic Product Offering Pricing develops (creates, modifies, deletes) a product offering pricing algorithmic matrix specification and the content of the matrix. The matrix is used to determine the price to charge/allow for a product that meet the criteria in the matrix, particularly for variable charges/allowances. For example, the amount to charge for data usage for some period.

Matrix specification development includes defining the matrix and its rows and columns. The rows and columns represent the criteria evaluated to determine the charge/allowance. They represent such things as types of product features/properties, types of product offering prices, algorithmic specific criteria such as type of customer, and so forth.

Matrix development defines a matrix based on a matrix specification, the content of matrix cells, as well as the product offering to which it applies. The cells represent the values for the product features/properties, such as excess data usage rates, product offering prices that will be charged/allowed, and values for algorithmic evaluation such as student, normal, or very important person (VIP) types of customers.

As with other pricing processes this process interacts with the Provide Product Offering Price Notification and Obtain Product Offering Price Approval processes to provide notifications and gain approval of any actions taken by this process.

Note that this process is meant to use/interact with generic property/feature processes to define them. To date the generic processes have not yet been developed.

Develop Algorithmic Product Offering Pricing Matrix Specification

Process Identifier: 1.2.7.2.2.3.1

Hierarchy Level: 6

Brief Description:

Define the matrix and its rows and columns and other dimensions. The rows and columns represent the criteria evaluated to determine the charge/allowance.

Extended Description:

Develop Algorithmic Product Offering Pricing Matrix Specification defines (creates, modifies, and removes) the matrix and its rows and columns and other dimensions of a multi-dimensional matrix. The rows and columns represent the criteria evaluated to determine the charge/allowance. They represent such things as types of product features/properties, types of product offering prices, algorithmic specific criteria such as type of customer, and so forth.

© TM Forum 2024. All Rights Reserved.

Note that properties/features are also known as characteristic specifications.

Develop Algorithmic Product Offering Pricing Matrix Specification Definition

Process Identifier: 1.2.7.2.2.3.1.1

Hierarchy Level: 7

Brief Description:

Develop the base product offering pricing matrix specification and associates it to the possible product offering(s) to which it applies..

Extended Description:

Develop Algorithmic Product Offering Pricing Matrix Specification Definition develops (creates, modifies, and removes) the base product offering pricing matrix specification and associates it to the possible product offering(s) to which it applies.

Develop Algorithmic Product Offering Pricing Matrix Specification Structure

Process Identifier: 1.2.7.2.2.3.1.2

Hierarchy Level: 7

Brief Description:

Develop the structure of a product offering pricing matrix by defining its rows and columns and other dimensions.

Extended Description:

Develop Algorithmic Product Offering Pricing Matrix Specification Structure defines (creates, modifies, and removes) the structure of a product offering pricing matrix including its row(s)/columns and other dimensions of a multi-dimensional matrix as well as their sequence.

© TM Forum 2024. All Rights Reserved.

The rows and columns represent the criteria evaluated to determine the charge/allowance. They represent such things as types of product features/properties, types of product offering prices, algorithmic specific criteria such as type of customer, and so forth.

Develop Algorithmic Product Offering Pricing Matrix

Process Identifier: 1.2.7.2.2.3.2

Hierarchy Level: 6

Brief Description:

Define a product offering pricing matrix based on a matrix specification, the content of matrix cells, as well as the specific product offering to which it applies.

Extended Description:

Develop Algorithmic Product Offering Pricing Matrix defines (creates, modifies, and removes) a product offering pricing matrix based on a matrix specification, the content of matrix cells, as well as the specific product offering to which it applies. The cells represent the values for the product features/properties, such as excess data usage rates, product offering prices that will be charged/allowed, and values for algorithmic evaluation, such as student, normal, or very important person (VIP) types of customers.

Note that features/properties are also known as characteristic specification values.

Develop Algorithmic Product Offering Pricing Matrix Definition

Process Identifier: 1.2.7.2.2.3.2.1

Hierarchy Level: 7

Brief Description:

Define the product offering pricing matrix and its association(s) to the specific product offering(s) to which it applies.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Develop Algorithmic Product Offering Pricing Matrix Definition defines the product offering pricing matrix based on a matrix specification and its association(s) to the specific product offering(s) to which it applies.

Develop Algorithmic Product Offering Pricing Matrix Cells

Process Identifier: 1.2.7.2.2.3.2.2

Hierarchy Level: 7

Brief Description:

Define the content of the product offering pricing matrix cells.

Extended Description:

Develop Algorithmic Product Offering Pricing Matrix Cells defines the content of the product offering pricing matrix cells.

The cells represent the values for the product features/properties, such as excess data usage rates, product offering prices that will be charged/allowed, and values for algorithmic evaluation such as student, normal, or very important person (VIP) types of customers.

Note that features/properties are also known as characteristic specification values.

Feature/Property Product Offering Pricing

Process Identifier: 1.2.7.2.2.4

Hierarchy Level: 5

Brief Description:

Define simple to complex feature/property-based product offering pricing.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Feature/Property Product Offering Pricing defines (creates, modifies, removes) simple to complex feature/property-based product offering pricing. Simple pricing is based on an association between one or more features/properties and a product offering price. For example, the price may vary based on the speed of internet connectivity. Complex pricing is defined by a group of features/properties upon which series of operations is performed to determine the price. For example, the price for a movie may be based on the title and format. A feature/property is also known as a characteristic.

As with other pricing processes this process interacts with the Provide Product Offering Price Notification and Obtain Product Offering Price Approval processes to provide notifications and gain approval of any actions taken by this process.

Note that this process is meant to use/interact with generic property/feature processes to define them. To date the generic processes have not yet been developed.

Develop Simple Feature/Property Product Offering Pricing

Process Identifier: 1.2.7.2.2.4.1

Hierarchy Level: 6

Brief Description:

Associate or disassociate a product offering price with one or more features/properties upon which it is based.

Extended Description:

Not used for this process element

Develop Complex Feature/Property Product Offering Pricing

Process Identifier: 1.2.7.2.2.4.2

Hierarchy Level: 6

© TM Forum 2024. All Rights Reserved.

Brief Description:

Define a group of features/properties upon which series of operations is performed to determine the price of a product offering.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Develop Complex Feature/Property Product Offering Pricing defines (creates, modifies, removes) a group of features/properties upon which series of operations is performed to determine the price. The series of operations defines an expression that when evaluated determines the price for the product offering. A feature/property is also known as a characteristic.

Single members of the group can be modified and/or removed as well as the entire group upon which the price is based.

Product Offering Cataloging

Process Identifier: 1.2.7.2.3

Hierarchy Level: 4

Brief Description:

Develop a specification (definition) of a catalog containing product offerings, develop a product offering catalog, and exchange a catalog among parties.

Extended Description:

Product Offering Cataloging develops a specification (definition) for a catalog containing product offerings, develops a product offering catalog, and exchanges a catalog among parties.

Product catalog specifications define reusable definitions for one or more catalogs. For example, a catalog specification that defines a catalog of smart home devices that is updated with new devices periodically and issued as a new catalog.

Product catalogs can be exchanged by sending a catalog to another party and receiving a catalog from another party. The receiving party could be a prospect, a customer, or another enterprise that may become a business partner that makes an enterprise's offerings available to the market. Similarly a catalog received from another party may be a prelude to the possible on-boarding of the parties offerings.

© TM Forum 2024. All Rights Reserved.

Note that this process reuses a set of generalized cataloging processes that can also be used to develop service catalogs and resource catalogs.

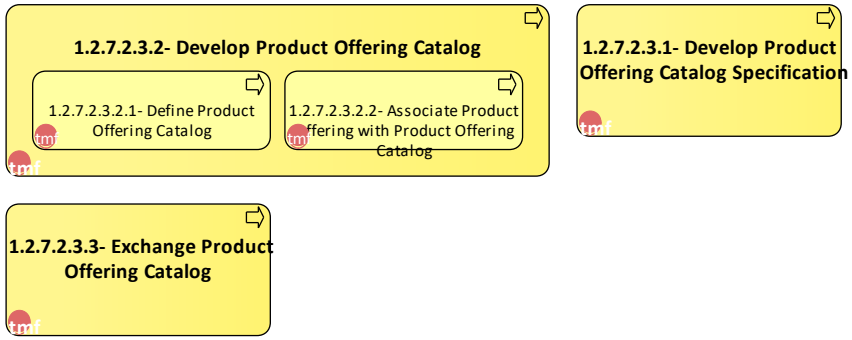

Figure 15: Product Offering Cataloging Children

Develop Product Offering Catalog

Process Identifier: 1.2.7.2.3.2

Hierarchy Level: 5

Brief Description:

Define, update, and remove a product offering catalog.

Extended Description:

Develop Product Offering Catalog defines, updates, and removes a product offering catalog. It associates a product offering and applicable product offering prices with a catalog. The product offering may have been developed by an enterprise or on-boarded from another party.

© TM Forum 2024. All Rights Reserved.

Define Product Offering Catalog

Process Identifier: 1.2.7.2.3.2.1

Hierarchy Level: 6

Brief Description:

Define, update, and remove a product offering catalog.

Extended Description:

Define Product Offering Catalog uses the generalized Develop Catalog process and its sub-processes to define, update, and remove a specific type of catalog, in this case a product offering catalog.

Associate Product Offering with Product Offering Catalog

Process Identifier: 1.2.7.2.3.2.2

Hierarchy Level: 6

Brief Description:

Associate and disassociate a product offering to/from a product offering catalog.

Extended Description:

Associate Product Offering with Product Offering Catalog associates a product offering and applicable product offering prices with a catalog. The product offering may have been developed by an enterprise or on-boarded from another party.

Develop Product Offering Catalog Specification

Process Identifier: 1.2.7.2.3.1

Hierarchy Level: 5

© TM Forum 2024. All Rights Reserved.

Brief Description:

Define, update, and remove the specification for a product offering catalog.

Extended Description:

Develop Product Offering Catalog Specification defines, updates, and removes the specification for a product catalog. It uses the generalized Develop Catalog Specification process to develop a specific type of catalog specification, in this case a product offering catalog specification.

Exchange Product Offering Catalog

Process Identifier: 1.2.7.2.3.3

Hierarchy Level: 5

Brief Description:

Exchange a product offering catalog with another party.

Extended Description:

Exchange Product Offering Catalog exchanges a catalog with another party engaged in the value fabric. The exchange may be sending a product offering catalog to another party or receiving one from another party.

It uses the generalized Exchange Catalog process to exchange a catalog, in this case a product offering catalog.

Product Offering Agreement Management

Process Identifier: 1.2.7.2.4

Hierarchy Level: 4

© TM Forum 2024. All Rights Reserved.

Brief Description:

Develop a template agreement that defines the terms/conditions associated with a product offering.

Extended Description:

Product Offering Agreement Management develops a template agreement that defines the terms/conditions associated with a product offering. The terms/conditions are accepted by a party when the offering is acquired.

This process uses the general Party Agreement Management process to develop a template agreement. It's focus is on defining product offering terms/conditions, such as financial terms (which includes such things as acceptable methods of payment), shipment terms, and service term (which includes early termination fees). It also associates an offering and price(s) with the terms/conditions and with a template agreement.

Note that Party Agreement Management is also used to define template service level agreements and associate them to a product offering and/or a product specification.

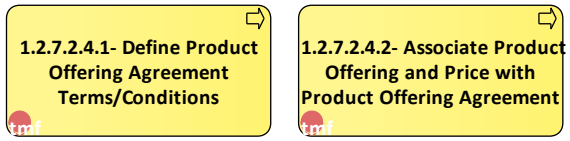

Figure 16: Product Offering Agreement Management Children

Define Product Offering Agreement Terms/Conditions

Process Identifier: 1.2.7.2.4.1

Hierarchy Level: 5

Brief Description:

© TM Forum 2024. All Rights Reserved.

Define terms/conditions for a product offering agreement.

Extended Description:

Define Product Offering Agreement Terms/Conditions defines product offering terms/conditions, such as financial terms (which includes such things as acceptable methods of payment), shipment terms, and service term (which includes early termination fees).

The terms/conditions are accepted by a party when the offering is acquired.

Associate Product Offering and Price with Product Offering Agreement

Process Identifier: 1.2.7.2.4.2

Hierarchy Level: 5

Brief Description:

Associate a product offering and price(s) with a product offering template agreement and the product offering and price(s) with the terms/conditions.

Extended Description:

Not used for this process element

Product Offering Prototyping

Process Identifier: 1.2.7.2.5

Hierarchy Level: 4

Brief Description:

Iteratively develop a product offering to a state that enables it to be tested in some way.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Product Offering Prototyping iteratively develops a product offering. Product Offering Development & Retirement processes develop each iteration of the offering to a state that enables it to be tested in some way by the Product Offering Development & Retirement's Conduct Product Offering Acceptance Testing process. Tests can be conducted internally, in the form of a pilot, or field trial. Tests are measured against defined acceptance criteria. Identified improvements/enhancements are made during the next iteration based on test results. Once the final iteration tests are accepted the offering is rolled out and launched to the market at large.

Note: This process is not further decomposed, because the process uses existing Product Offering Development & Retirement processes.

Product Offering Promotion Development

Process Identifier: 1.2.7.2.6

Hierarchy Level: 4

Brief Description:

Develop a promotion for one or more product offerings delivered using different mediums (television, radio, print, online) that advertise the promotion to reach the market, customers and channels.

Extended Description:

Product Offering Promotion Development develops a promotion for one or more product offerings delivered using different mediums (television, radio, print, online) that advertise the promotion to reach the market, customers and channels.

Product offering promotions can be designed with different ends in mind, including introducing a new product, retaining customers, bringing in new customers, and increasing sales of a product already on the market.

© TM Forum 2024. All Rights Reserved.

Product Offering Promotion Development works with other processes, such as Market Research, Marketing Campaign Management, Marketing Communications, and Advertising Management to design the promotion and advertising. One of the key roles of all these processes is to position the product in the market, especially versus competitive products.

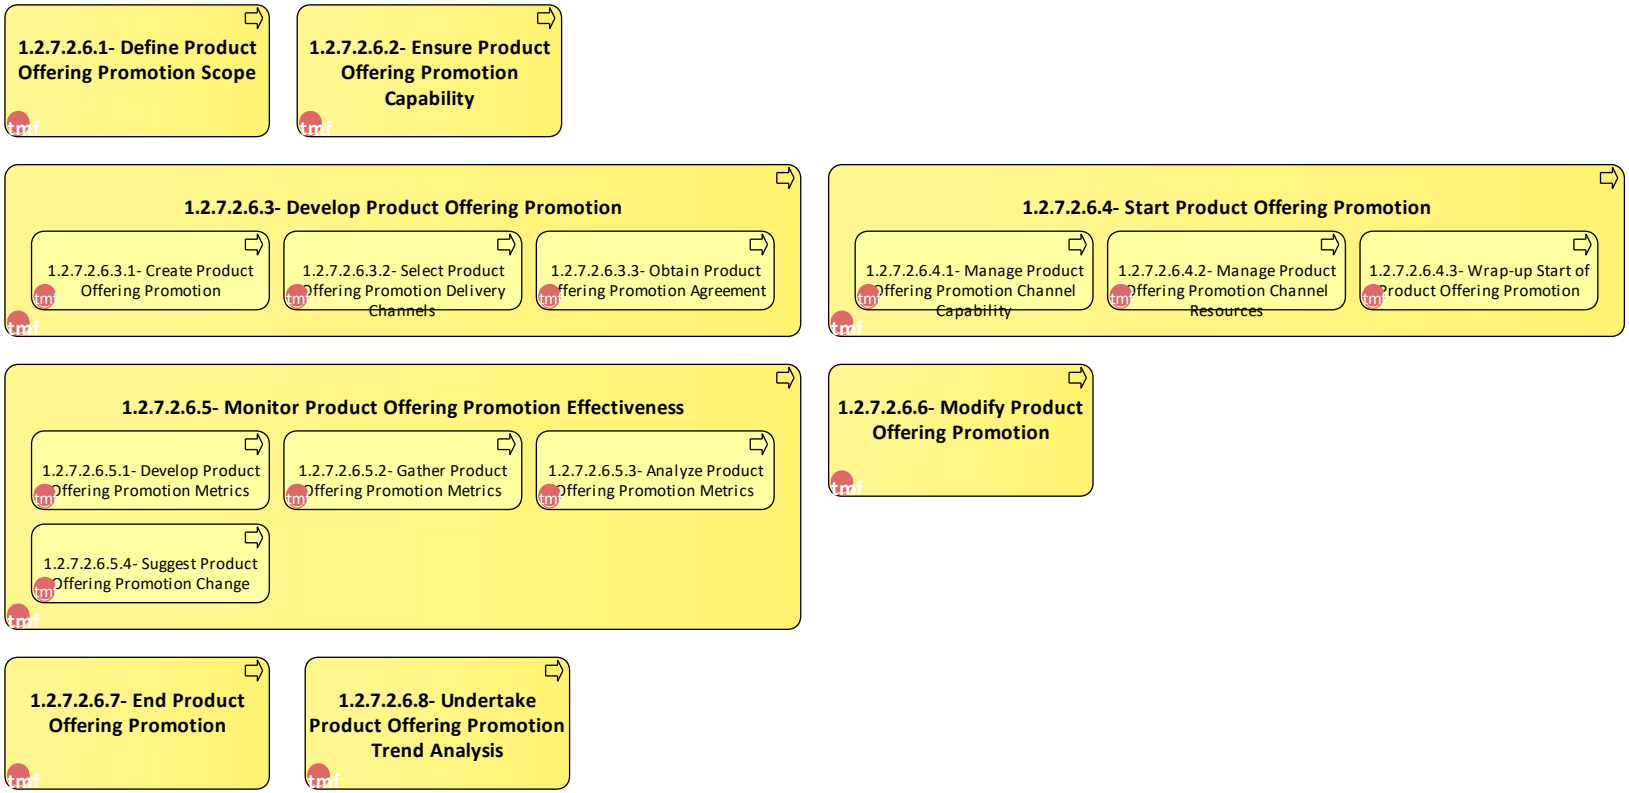

Figure 17: Product Offering Promotion Development Children

© TM Forum 2024. All Rights Reserved.

Define Product Offering Promotion Scope

Process Identifier: 1.2.7.2.6.1

Hierarchy Level: 5

© TM Forum 2024. All Rights Reserved.

Brief Description:

Define the specific product promotion scope to be used for positioning the product offering(s) involved in the promotion in the marketplace.

Extended Description:

Not used for this process element

Ensure Product Offering Promotion Capability

Process Identifier: 1.2.7.2.6.2

Hierarchy Level: 5

Brief Description:

Not used for this process element.

Extended Description:

Ensure that there is capability (for example, information, materials, systems and resources) so that the product promotion can begin and managed. Monitor planned promotions and redistribute existing capability or enable new capability (people, facilities, infrastructure).

Develop Product Offering Promotion

Process Identifier: 1.2.7.2.6.3

Hierarchy Level: 5

Brief Description:

Manage all activities and stakeholder engagement to develop and agree on a product offering promotion and the selection of appropriate channel or channels to support delivery of the promotion.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Develop Product Offering Promotion manages all activities and stakeholder engagement to develop and agree on a product offering promotion and the selection of appropriate channel or channels to support delivery of the promotion. It also interacts with Marketing Communications to develop promotional messages and Marketing Campaign Management to associate promotions with a campaign.

Create Product Offering Promotion

Process Identifier: 1.2.7.2.6.3.1

Hierarchy Level: 6

Brief Description:

Engage with stakeholders engagement to develop a product offering promotion and associate it with applicable marketing campaigns and marketing communications.

Extended Description:

Not used for this process element

Select Product Offering Promotion Delivery Channels

Process Identifier: 1.2.7.2.6.3.2

Hierarchy Level: 6

Brief Description:

Select the appropriate channel or channels to support delivery of a product offering promotion.

Extended Description:

Select Product Offering Promotion Delivery Channels selects the appropriate channel or channels to support delivery of a product offering promotion. A particular promotion may require selection of one or several delivery channels.

© TM Forum 2024. All Rights Reserved.

Obtain Product Offering Promotion Agreement

Process Identifier: 1.2.7.2.6.3.3

Hierarchy Level: 6

Brief Description:

Obtain stakeholder agreement for the product offering promotion.

Extended Description:

Not used for this process element

Start Product Offering Promotion

Process Identifier: 1.2.7.2.6.4

Hierarchy Level: 5

Brief Description:

Manage and co-ordinate the delivery of the product offering promotion to the selected channel(s).

Extended Description:

Start Product Offering Promotion manages and co-ordinates the delivery of the product offering promotion to the selected channel(s). It ensures that the channel(s) (owned and/or contracted) are adequately trained and/or informed to manage the start of the promotion, and that sufficient resources are available in the selected channel(s) to support its start.

Manage Product Offering Promotion Channel Capability

Process Identifier: 1.2.7.2.6.4.1

Hierarchy Level: 6

© TM Forum 2024. All Rights Reserved.

Brief Description:

Ensure that the channel(s) (owned and/or contracted) are adequately trained and/or informed to manage the start of the product offering promotion.

Extended Description:

Not used for this process element

Manage Product Offering Promotion Channel Resources

Process Identifier: 1.2.7.2.6.4.2

Hierarchy Level: 6

Brief Description:

Ensure that sufficient resources are available in the selected channel(s) to support the start of a product offering promotion.

Extended Description:

Not used for this process element

Wrap-up Start of Product Offering Promotion

Process Identifier: 1.2.7.2.6.4.3

Hierarchy Level: 6

Brief Description:

Wrap-up the start of the product offering promotion.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Wrap-up Start of Product Offering Promotion completes the start of the product offering promotion. It is coordinated with the delivery of the associated marketing campaigns and marketing communications.

Monitor Product Offering Promotion Effectiveness

Process Identifier: 1.2.7.2.6.5

Hierarchy Level: 5

Brief Description:

Establish metrics, monitor metrics, and analyze metrics to gauge the effectiveness of a marketing campaign or campaigns.

Extended Description:

Monitor Marketing Campaign Effectiveness establishes metrics, monitors metrics, and analyzes metrics to gauge the effectiveness of a marketing campaign or campaigns. Based on analysis these processes feedback suggested changes to adapt the campaign or campaigns to become more effective now or in the future.

Note that this process' sub-processes reuse a generalized set of metric processes to develop, gather, and analyze (to some degree) marketing campaign metrics.

Develop Product Offering Promotion Metrics

Process Identifier: 1.2.7.2.6.5.1

Hierarchy Level: 6

Brief Description:

Develop metrics to gauge the effectiveness of product offering promotions.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Not used for this process element

Gather Product Offering Promotion Metrics

Process Identifier: 1.2.7.2.6.5.2

Hierarchy Level: 6

Brief Description:

Gather product offering promotion metrics to gauge the effectiveness of promotion(s).

Extended Description:

Not used for this process element

Analyze Product Offering Promotion Metrics

Process Identifier: 1.2.7.2.6.5.3

Hierarchy Level: 6

Brief Description:

Analyze gathered product offering promotion(s) metrics to identify any issues with the promotion(s).

Extended Description:

Analyze Product Offering Promotion Metrics analyzes gathered product offering promotion(s) metrics to identify any issues with the promotion(s). The analysis includes identifying any established thresholds that have been crossed and the associated consequence (good or bad). A report is produced that reflects the effectiveness of the product offering promotion(s).

© TM Forum 2024. All Rights Reserved.

Suggest Product Offering Promotion Change

Process Identifier: 1.2.7.2.6.5.4

Hierarchy Level: 6

Brief Description:

Feedback suggested marketing campaign changes to adapt it to become more effective.

Extended Description:

Suggest Product Offering Promotion Change feeds back suggested product offering promotion changes to adapt it to become more effective. This is based in part on the analysis of product offering promotion metrics.

Modify Product Offering Promotion

Process Identifier: 1.2.7.2.6.6

Hierarchy Level: 5

Brief Description:

Modify a product offering promotion to improve its effectiveness based on metric analysis or based on feedback from recipients or stakeholders.

Extended Description:

Not used for this process element

End Product Offering Promotion

Process Identifier: 1.2.7.2.6.7

Hierarchy Level: 5

© TM Forum 2024. All Rights Reserved.

Brief Description:

End a product offering promotion when its useful life is reached.

Extended Description:

Not used for this process element

Undertake Product Offering Promotion Trend Analysis

Process Identifier: 1.2.7.2.6.8

Hierarchy Level: 5

Brief Description:

Undertake trend analysis on product offering promotions including the identification of problems occurring with them.

Extended Description:

Not used for this process element

Product Specification Test Development & Retirement

Process Identifier: 1.2.7.3

Hierarchy Level: 3

Brief Description:

Product Test Development & Retirement is in charge of the Product Test catalog.

Extended Description:

Product Test Development & Retirement is in charge of the Product Test catalog.

© TM Forum 2024. All Rights Reserved.

A type of Product Test aims at measuring proper functioning and capacities of a Product whatever the context is (Product Specification Development & Retirement, Order Handling, Customer Order Orchestration, Product Performance Management, Customer Problem Handling, Product Test Management).

Product Test Development & Retirement includes:

- Specifying in detail each Product Test according to the different context. It includes specifying:

- the roles authorized to use the Test and quotas for each type of role
- the method to conduct the Test
- the rules that define the strategies for conducting the test (including the test plan)
- the thresholds and related actions
- the relationships with lower level tests (Service Test or Resource Test)
- the report of test results with rules for enrichment of Service & Resource Tests results according to role asking for it

- Specifying test scenarios defining sequence of Tests with rules about context and planning to trigger it. It includes roles allowed for asking test scenario and corresponding quotas.

Product Capacity Management

Process Identifier: 1.2.8

Hierarchy Level: 2

Brief Description:

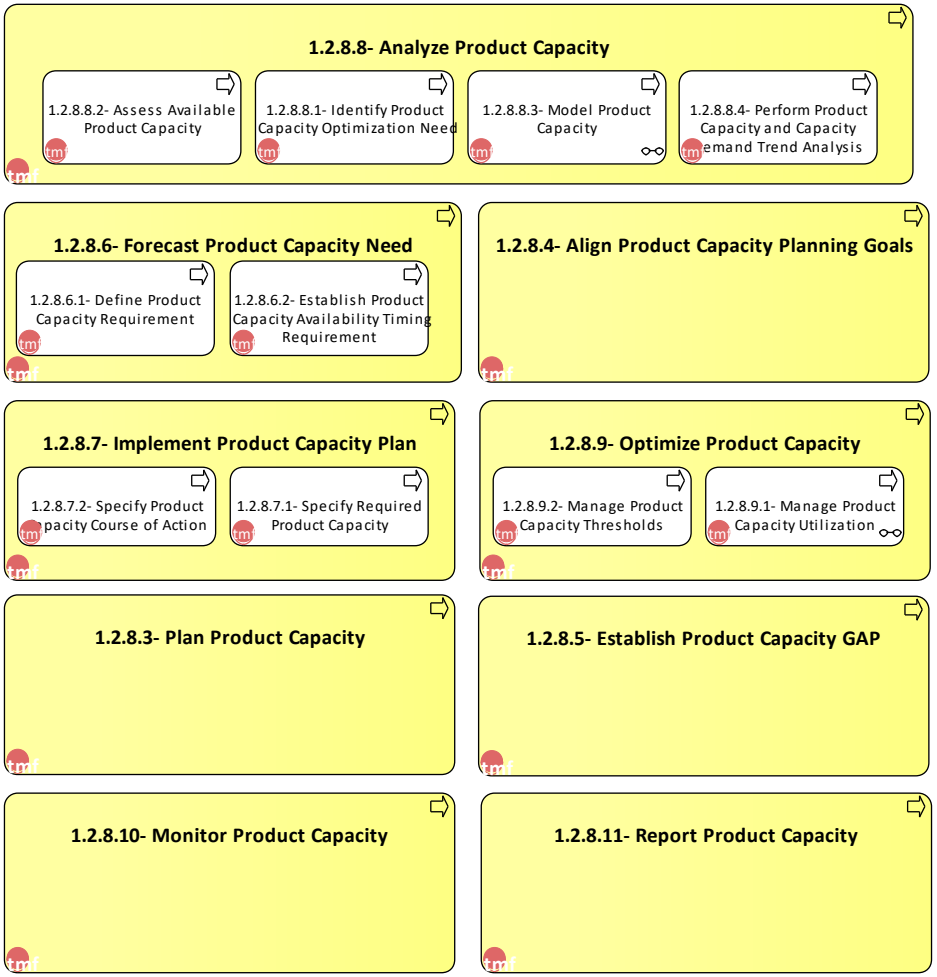
Product Capacity Management business process manages the activities required to ensure a business is able to plan, model, analyze, optimize, monitor and report product capacity, and related constraints according the commercial objectives in a timely and effective manner.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Product Capacity Management business process manages the activities required to ensure a business is able to plan, model, analyze, optimize, monitor and report product capacity, and related constraints according the commercial objectives in a timely and effective manner.

The underlying business activities supporting Product Capacity Management ensure that there is an effective understanding and management of Products Capacity in line with commercial demand and objectives, along with all the underlying production constraints.



© TM Forum 2024. All Rights Reserved.

Figure 18: Product Capacity Management Children

Plan Product Capacity

Process Identifier: 1.2.8.3

Hierarchy Level: 3

Brief Description:

Plan Product Capacity business activity determine the design and organization of the production capacity management activities needed to meet changing demands for products over a period of time, as well as implement the plan for product capacity needs.

Extended Description:

Plan Product Capacity business activity determine the design and organization of the production capacity management activities needed to meet changing demands for products over a period of time, as well as implement the plan for product capacity needs.

A Product's capacity plan ensures Product Management:

- aligns capacity planning strategies with both commercial and operational goals,
- ensures that there are sufficient product capacity to support planned and forecasted commercial objectives,
- identifies gaps in capacity allocation early,
- determines product capacity needs according to demand,
- determines constraints and usage patterns over time,
- forecasts future capacity needs,
- and communicates products capacity requirements in time.

© TM Forum 2024. All Rights Reserved.

In the context of capacity planning, consideration is given to all input requirements, conversion processes and outputs when planning product capacity.

Align Product Capacity Planning Goals

Process Identifier: 1.2.8.4

Hierarchy Level: 3

Brief Description:

Align Product Capacity Planning Goals business activity is in charge of correlating the product capacity plans with business demand.

Extended Description:

Align Product Capacity Planning Goals business activity is in charge of correlating the product capacity plans with business demand.

Establish Product Capacity GAP

Process Identifier: 1.2.8.5

Hierarchy Level: 3

Brief Description:

Establish Product Capacity GAP business activity identifies any disparity between product capacity goals and business objectives.

Extended Description:

Establish Product Capacity GAP business activity identifies any disparity between product capacity goals and business objectives.

Forecast Product Capacity Need

Process Identifier: 1.2.8.6

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 3

Brief Description:

Forecast Product Capacity Need business activity develops projections that predict product capacity growth by understanding the impact on business.

Extended Description:

Forecast Product Capacity Need business activity develops projections that predict product capacity growth by understanding the impact on business.

Define Product Capacity Requirement

Process Identifier: 1.2.8.6.1

Hierarchy Level: 4

Brief Description:

Define Product Capacity Requirement business activity establishes, measures, and adjusts conditions that impact on planning product capacity for business expectations.

Extended Description:

Define Product Capacity Requirement business activity establishes, measures, and adjusts conditions that impact on planning product capacity for business expectations.

Establish Product Capacity Availability Timing Requirement

Process Identifier: 1.2.8.6.2

Hierarchy Level: 4

Brief Description:

Establish Product Capacity Availability Timing Requirement business activity identify scheduling needs for product capacity changes.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Establish Product Capacity Availability Timing Requirement business activity identify scheduling needs for product capacity changes.

Implement Product Capacity Plan

Process Identifier: 1.2.8.7

Hierarchy Level: 3

Brief Description:

Implement Product Capacity Plan business activity is in charge of putting into effect the steps needed to achieve Product Capacity plans, with required product capacity, and product capacity management course of action.

Extended Description:

Implement Product Capacity Plan business activity is in charge of putting into effect the steps needed to achieve Product Capacity plans, with required product capacity, and product capacity management course of action.

Specify Product Capacity Course of Action

Process Identifier: 1.2.8.7.2

Hierarchy Level: 4

Brief Description:

Specify Product Capacity Course of Action business activity identifies clearly and definitely sequence of activities that must be followed to meet 'product capacity plan' expectations.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Specify Product Capacity Course of Action business activity identifies clearly and definitely sequence of activities that must be followed to meet 'product capacity plan' expectations.

Specify Required Product Capacity

Process Identifier: 1.2.8.7.1

Hierarchy Level: 4

Brief Description:

Specify Required Product Capacity business activity is in charge of implementing product capacity plans by identifying clearly and definitely product capacity expectations.

Extended Description:

Specify Required Product Capacity business activity is in charge of implementing product capacity plans by identifying clearly and definitely product capacity expectations.

Analyze Product Capacity

Process Identifier: 1.2.8.8

Hierarchy Level: 3

Brief Description:

Analyze Product Capacity business activity establishes and models insights, patterns and changes to product capacity, by assessing potential capacity and the actual capacity a product currently achieves.

Extended Description:

Analyze Product Capacity business activity establishes and models insights, patterns and changes to product capacity, by assessing potential capacity and the actual capacity a product currently achieves.

© TM Forum 2024. All Rights Reserved.

This business activity covers collection of product-related data (usage data, performance data, operational data etc.) to support Product Managers to identify patterns and insights relating to a product.

Analyze Product Capacity support Product Capacity Management by providing relevant and timely insights, including available inventory holding capacity, products "time and material" capacity, etc. and how capacity utilization (allocated, in-use, unused) can be optimized to increase business value.

Identify Product Capacity Optimization Need

Process Identifier: 1.2.8.8.1

Hierarchy Level: 4

Brief Description:

Identify Product Capacity Optimization Need business activity establish the best, or most effective, use of product capacity.

Extended Description:

Identify Product Capacity Optimization Need business activity establish the best, or most effective, use of product capacity.

Assess Available Product Capacity

Process Identifier: 1.2.8.8.2

Hierarchy Level: 4

Brief Description:

Assess Available Product Capacity business activity evaluates unused product capacity in relation to product capacity plans, and product utilization trends.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Assess Available Product Capacity business activity evaluates unused product capacity in relation to product capacity plans, and product utilization trends.

Model Product Capacity

Process Identifier: 1.2.8.8.3

Hierarchy Level: 4

Brief Description:

Model Product Capacity business activity establishes a representation of Product Capacity based on business defined properties.

Extended Description:

Model Product Capacity business activity establishes a representation of Product Capacity based on business defined properties.

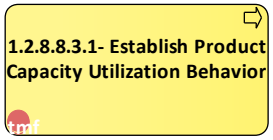


Figure 19: Model Product Capacity Children

Establish Product Capacity Utilization Behavior

Process Identifier: 1.2.8.8.3.1

Hierarchy Level: 5

Brief Description:

Establish Product Capacity Utilization Behavior business activity develops Product Capacity usage models.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Establish Product Capacity Utilization Behavior business activity develops Product Capacity usage models.

Perform Product Capacity and Capacity Demand Trend Analysis

Process Identifier: 1.2.8.8.4

Hierarchy Level: 4

Brief Description:

Perform Product Capacity and Capacity Demand Trend Analysis business activity analysis trends between available product capacity and product capacity demand according to business and usage.

Extended Description:

Perform Product Capacity and Capacity Demand Trend Analysis business activity analysis trends between available product capacity and product capacity demand according to business and usage.

Optimize Product Capacity

Process Identifier: 1.2.8.9

Hierarchy Level: 3

Brief Description:

Optimize Product Capacity business activity enable improve Product use by managing underlying and related dependencies and constraints.

Extended Description:

Optimize Product Capacity business activity enable improve Product use by managing underlying and related dependencies and constraints.

© TM Forum 2024. All Rights Reserved.

For Product Capacity Management, Optimize Product Capacity can enable reclaim unused Product capacity, allocate additional capacity just in time to meet demand, repurpose products based on capacity utilization patterns and support configuration management of constraints and dependencies.

Manage Product Capacity Utilization

Process Identifier: 1.2.8.9.1

Hierarchy Level: 4

Brief Description:

Manage Product Capacity Utilization business activity is in charge of fulfilling and assuring the effective use of product capacity.

Extended Description:

Manage Product Capacity Utilization business activity is in charge of fulfilling and assuring the effective use of product capacity.

Monitor Product Capacity

Process Identifier: 1.2.8.10

Hierarchy Level: 3

Brief Description:

Monitor Product Capacity business activity identifies relevant Product Capacity attributes to track, and tracks all attributes, their use, and changes.

Extended Description:

Monitor Product Capacity business activity identifies relevant Product Capacity attributes to track, and tracks all attributes, their use, and changes.

Monitor Product Capacity supports all activities of Product Capacity Management by providing timely visibility for all concerns around Product Capacity.

Report Product Capacity

Process Identifier: 1.2.8.11

Hierarchy Level: 3

Brief Description:

Report Product Capacity business activity prepare and present detailed accounts on all relevant Product Capacity information, as deemed timely, relevant and reliable for use by business functions.

Extended Description:

Report Product Capacity business activity prepare and present detailed accounts on all relevant Product Capacity information, as deemed timely, relevant and reliable for use by business functions.

Different business functions with interest for Product Capacity may require specific reports with specific information. This business activity ensures Report Product Capacity business activity ensures information on Product Capacity is collated, organized and presented in forms useful and reliable to the needs of business functions in a timely manner.

Product Inventory Management

Process Identifier: 1.2.11

Hierarchy Level: 2

Brief Description:

Product Inventory Management is responsible to establish, manage and administer the enterprise's product inventory, as embodied in the Product Inventory repository and monitor and report on the usage and access to the product inventory.

Extended Description:

The purpose of the Manage Product Inventory processes are twofold:

- Establish, manage and administer the enterprise's product inventory, monitor and report on the usage and access to the product inventory, and the quality of the data maintained in it. The product inventory maintains records of all products, their interactions with the enterprise, and any other product related
- Provide available Product Inventory related information required to support Fulfillment, Assurance and Billing & Revenue processes.

The product inventory is also responsible for maintaining the association between customers and purchased product instances, created as a result of the Order Handling processes for a Product Specification in the context of a Product Offering.

Managing product inventory includes product creation, modification to the product inventory.

Responsibilities of these processes include, but are not limited to:

- Identifying the inventory-relevant information requirements to be captured for products;
- Identifying, establishing and maintaining product inventory repository facilities;
- Establishing and managing the product inventory management and information capture processes;

© TM Forum 2024. All Rights Reserved.

- Managing the registration and access control processes that enable processes to create, modify and/or look up product information to and from the product inventory;
- Ensuring the product inventory repository accurately captures and records all identified product details, through use of automated or manual audits;
- Tracking and monitoring of the usage of, and access to, the product inventory repository and associated costs, and reporting on the findings;
- Identifying any technical driven shortcomings of the product inventory repository, and providing input to Resource Development & Management processes to rectify these issues.

Identify Product Inventory Shortcomings

Process Identifier: 1.2.11.6

Hierarchy Level: 3

Brief Description:

Identifying any technical driven shortcomings of the product inventory repository, and providing input to Resource Development & Management processes to rectify these issues.

Extended Description:

Not used for this process element

Product Lifecycle Management Support

Process Identifier: 1.2.11.7

Hierarchy Level: 3

Brief Description:

Support the management of the lifecycle of a product and pricing associated with a product in the Product Inventory.

Extended Description:

Product Lifecycle Management Support supports the management of the lifecycle of a product and pricing associated with a product.

© TM Forum 2024. All Rights Reserved.

It can create a product, specify the involvement one or more parties have with it, updates information about the product including the status and relationships with Product Specification, Product Offering, Account and all related roles.

The lifecycle of a product also includes prices associated with it which are also managed by this process.

Product Lifecycle Administration Support

Process Identifier: 1.2.11.7.1

Hierarchy Level: 4

Brief Description:

Create a product, specify the involvement one or more parties have with it, update information about the product, and remove the product when it is no longer of interest to an enterprise and/or the primary party responsible for the product at request from Operations processes.

Extended Description:

Product Lifecycle Administration Support creates a product, specifies the involvement one or more parties have with it, updates information about the product including the status and relationships with Product Specification, Product Offering, Customer Account and all related roles at request from Operations processes.

Involvement may include the party account responsible for paying for the purchase and other charges, the party primarily responsible for the product, as well as users of the product.

Updates may include adding new products to a bundle as well as the location of the product.

© TM Forum 2024. All Rights Reserved.

Figure 22: Product Lifecycle Administration Support Children

Create Product

Process Identifier: 1.2.11.7.1.1

Hierarchy Level: 5

Brief Description:

Create a product as a standalone product or one that is part of a product bundle.

Extended Description:

Create Product creates a product as a standalone product, a product bundle, or one that is part of a product bundle. The product is associated with either the product specification or product offering that describes it. If the product is one that is customized by a party and not offered by an enterprise the product is associated to the product specification that describes it.

Features/properties chosen during the Product Offering Purchasing process or chosen by this process if the product is created outside of the Product Offering Purchasing process may also be created for the product. This is done if the Product Configuration process is not used to create them.

© TM Forum 2024. All Rights Reserved.

A product is associated with its installation location if applicable and the associated product offering terms/conditions that were accepted, such as those for a contract or voucher. It may also be associated with one or more other products. For example, one product may replace another.

Modify Product

Process Identifier: 1.2.11.7.1.3

Hierarchy Level: 5

Brief Description:

Update product information, such as features/properties and the associated location. Features/properties may also be removed.

Extended Description:

Not used for this process element.

Specify Party Product Involvement

Process Identifier: 1.2.11.7.1.2

Hierarchy Level: 5

Brief Description:

Specify the involvement one or more parties have with a product, the parties' types of involvement, as well as identity specific information for users.

Extended Description:

Specify Party Product Involvement specifies the involvement one or more parties have with it and the party account that will pay for the product. If the product is paid for when it is purchased and there are no recurring or other types of charges due at some point in the future, then the party account may not be specified. Involved parties type of involvement is also specified, such as user, owner, payer.

© TM Forum 2024. All Rights Reserved.

Additionally identity specific information, such as rights and restrictions, are specified for users (parties) of the product.

This process also updates and removes the involvement and identity specific information.

Product Pricing

Process Identifier: 1.2.11.7.2

Hierarchy Level: 4

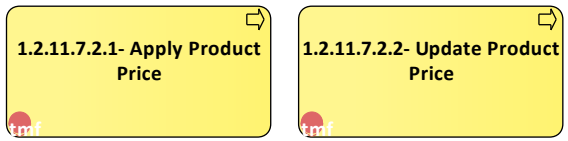
Brief Description:

Apply, update, and remove a price associated with a product.

Extended Description:

Product Pricing applies, updates a price associated with a product. A price may be applied when a party is browsing an enterprise's catalog (a form of window shopping that is supported by the Product Offering Purchase Lifecycle Management process), when configuring a product, or when purchasing a product offering.

The price may be what is paid when it is purchased or other types of charges due at some point in the future, such as recurring and usage based charges that are determined by a product's price.



© TM Forum 2024. All Rights Reserved.

Figure 23: Product Pricing Children

Apply Product Price

Process Identifier: 1.2.11.7.2.1

Hierarchy Level: 5

Brief Description:

Apply a product price to a product. The price may be influenced directly or indirectly by a policy.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Apply Product Price applies a product price to a product. The price may be influenced directly or indirectly by a policy. A price may be a single price, a group of prices, or part of the group. For example, a group may consist of a recurring payment for base usage of the product, such as the number of times medical information can be sent to a doctor each month, and another price for any usage that exceeds the base.

The price may also be dependent on a policy or a policy may determine another price to apply to the product or some other product. For example, viewing more than a defined number of videos may result in a free view for a family member. Policies are defined when the product offering is developed and associated with an item on a product offering purchase.

Update Product Price

Process Identifier: 1.2.11.7.2.2

Hierarchy Level: 5

Brief Description:

Make changes to the price of a product.

Extended Description:

Update Product Price makes changes to the price of a product. The update may include changes to associations with a policy that influences the price. This is typically triggered by changes to the price of a product offering in an enterprise's product catalog.

Product Usage Management

Process Identifier: 1.2.16

Hierarchy Level: 2

Brief Description:

Encompasses the functions required to guide, distribute, mediate, summarize, accumulate, and analyze Product Usage records.

© TM Forum 2024. All Rights Reserved.

Extended Description:

The Product Usage management processes encompass the functions required to guide, distribute, mediate, summarize, accumulate, and analyze Product Usage records. These processes may occur in real-time, near real-time (i.e. just at the end of the usage), or may be executed on a periodic basis.

Based on Service Usage, this process aims at identifying Product Usage. For example, for a Video on Demand where you can watch a video as many time as you want during 72 hours, several Service Usages might have been tracked (each time the user watches the video) and only one Product Usage will be identified for all Service Usages in the 72 hours after the first watch.

The guiding processes ensures that the Product Usage records used in the billing processes are appropriately related to the correct customer billing account and products.

The Product Usage records are edited and if necessary reformatted (mediated) to meet the needs of subsequent processes. The billing event records may also be enriched with additional data during this process.

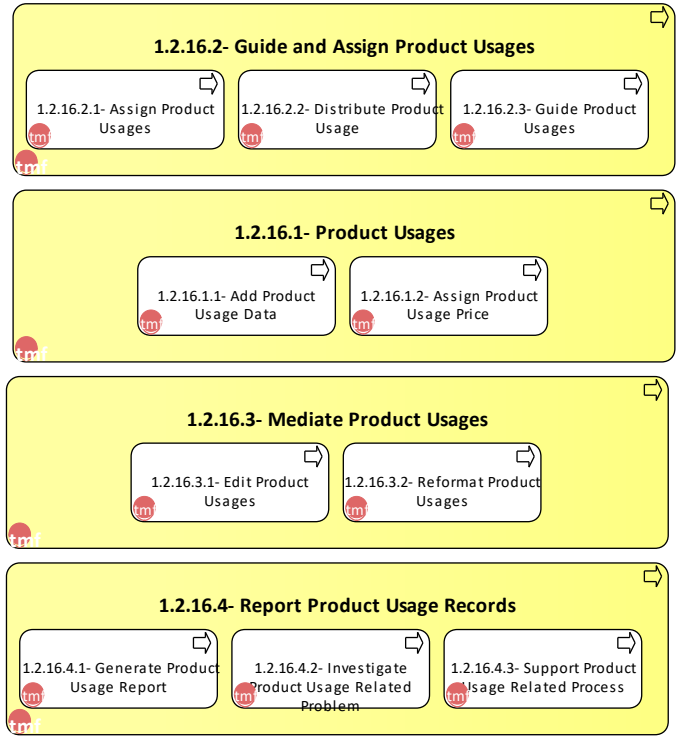

Figure 24: Product Usage Management Children

Product Usages

Process Identifier: 1.2.16.1

Hierarchy Level: 3

Brief Description:

© TM Forum 2024. All Rights Reserved.

Enrich product usage records with additional data.

Extended Description:

The Enrich Product Usages processes will augment the product usage records by adding data to the records from sources such as customer, product, or other reference data.

Add Product Usage Data

Process Identifier: 1.2.16.1.1

Hierarchy Level: 4

Brief Description:

Add data to the records from sources such as customer, product, or other reference data to augment the product usage records.

Extended Description:

Not used for this process element.

Assign Product Usage Price

Process Identifier: 1.2.16.1.2

Hierarchy Level: 4

Brief Description:

Assign a price to product usage without consideration of specific product or customer information. The assigned price may be used to enrich the product usage record.

Extended Description:

Not used for this process element

© TM Forum 2024. All Rights Reserved.

Guide and Assign Product Usages

Process Identifier: 1.2.16.2

Hierarchy Level: 3

Brief Description:

Ensures that the product usage records used in the billing processes are related to the correct customer billing account and subscribed products.

Extended Description:

The Guide Product Usages processes ensure that the event records used in the billing process relate to the correct customer billing account and products. A specific product usage record may be related to multiple customer billing accounts and subscribed products.

Distribution of product usage records to other processes may also occur.

Assign Product Usages

Process Identifier: 1.2.16.2.1

Hierarchy Level: 4

Brief Description:

Ensure that the Product Usages used in the billing process relate to the correct Product.

Extended Description:

Not used for this process element

© TM Forum 2024. All Rights Reserved.

Distribute Product Usage

Process Identifier: 1.2.16.2.2

Hierarchy Level: 4

Brief Description:

Distribute billing event records to other processes.

Extended Description:

Not used for this process element

Guide Product Usages

Process Identifier: 1.2.16.2.3

Hierarchy Level: 4

Brief Description:

Guide Product Usages process is in charge of identifying Product Usages based on Service Usages.

Extended Description:

Guide Product Usages process is in charge of identifying Product Usages based on Service Usages.

For example, for a Video on Demand where you can watch a video as many time as you want during 72 hours, several Service Usages might have been tracked (each time the user watches the video) and only one Product Usage will be identified for all Service Usages in the 72 hours after the first watch.

Mediate Product Usages

Process Identifier: 1.2.16.3

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 3

Brief Description:

Edits and reformats data for recipient applications.

Extended Description:

The Mediate Product Usages process edits and reformats the data record to meet the needs of a recipient application.

Edit Product Usages

Process Identifier: 1.2.16.3.1

Hierarchy Level: 4

Brief Description:

Edit the data record for recipient applications.

Extended Description:

Not used for this process element

Reformat Product Usages

Process Identifier: 1.2.16.3.2

Hierarchy Level: 4

Brief Description:

Reformat the data record for recipient applications.

Extended Description:

Report Product Usage Records

Process Identifier: 1.2.16.4

Hierarchy Level: 3

Brief Description:

Generate reports on product usage records based on requests from other processes.

Extended Description:

The purpose of the Report Product Usage Record processes is to generate reports on Product Usage records based on requests from other processes.

These processes produce reports that may identify abnormalities, which may be caused by fraudulent activity or related to customer complaints.

Investigation of problems related to these product usage records is also part of this process.

These processes also support other processes such as customer review of product usages (pre-billing and post-billing).

Generate Product Usage Report

Process Identifier: 1.2.16.4.1

Hierarchy Level: 4

Brief Description:

Generate reports on product usage records based on requests from other processes.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Not used for this process element

Investigate Product Usage Related Problem

Process Identifier: 1.2.16.4.2

Hierarchy Level: 4

Brief Description:

Investigate problems related to product usage records.

Product Rating & Rate Assignment

Process Identifier: 1.2.17

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 2

Brief Description:

Rate a value (monetary or other) to a Product Usage or a set of Product Usages and assign the result to a Product and a Billing Account.

© TM Forum 2024. All Rights Reserved.

Extended Description:

The purpose of Product Rating & Assignment is to rate a value (monetary or other) to Product Usage or a set of Product Usages and assign the result to a Product and a Billing Account. The charge may be either a credit or a debit and can be handled either online or offline.

Online charging is performed in real-time, requiring an authorization component which may affect how the service is rendered and enables an operator to provide prepaid services to its customers. Whereas offline charging is performed after the service is rendered and is not required to be done in real-time and generally relates to subscription based products.

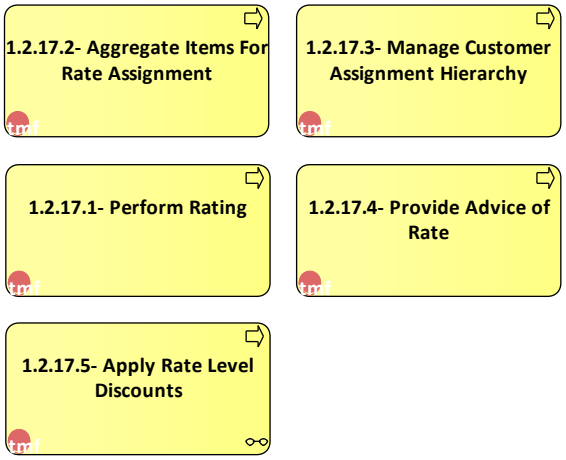

Figure 25: Product Rating & Rate Assignment Children

Perform Rating

Process Identifier: 1.2.17.1

Hierarchy Level: 3

© TM Forum 2024. All Rights Reserved.

Brief Description:

Calculating the value of a product usage or a set of product usages, before, during or after the rendering of the service.

Extended Description:

Process responsible for calculating the value of a product usage or a set of product usages, before, during or after the rendering of the service, based on parameters of the request (type, quantity, etc.), parameters of the customer/subscriber (tariffs, price plans, accumulated usage, contracts, etc.) and other parameters (time-of-day, taxes, etc.). The same request maybe rated differently for different subscribers based on their purchased offers or agreements.

Aggregate Items For Rate Assignment

Process Identifier: 1.2.17.2

Hierarchy Level: 3

Brief Description:

Manages the accumulation of items that may be used in the selection of a value or in calculation of a rate/discount.

Extended Description:

This process is responsible for accumulating contributing items, which can be quantities, values (monetary or other) or both. Aggregation can occur over time or can be initiated to gather a “snapshot” of the items at a point in time.

Manage Customer Assignment Hierarchy

Process Identifier: 1.2.17.3

Hierarchy Level: 3

Brief Description:

Managing the charging relationships among subscribers.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Customer hierarchies are commonly used for corporate customers, family plans or other type of affinity groups. This process manages the assignment relationships among subscribers, e.g. sharing, inheriting or restricting balances, price plans and discounts. Thereby assuring that a charge is added to or subtracted from the correct account balance.

Provide Advice of Rate

Process Identifier: 1.2.17.4

Hierarchy Level: 3

Brief Description:

Provide advice of rate.

Extended Description:

The activity of Provide Advice of Rate (aka Advice of Charge) is responsible for providing advice on rates, in real-time or offline, an estimate or value of the rate for a specific usage request. The advice is usually based upon performing a full rating process for the request.

Apply Rate Level Discounts

Process Identifier: 1.2.17.5

Hierarchy Level: 3

Brief Description:

Applies discounts to product prices.

© TM Forum 2024. All Rights Reserved.

Extended Description:

This process applies discounts to product prices at an individual product level. A discount may be expressed as a monetary amount or percentage, and modifies a price for a product. When a discount is expressed as a percentage, the discounting process determines the discount calculated in relation to the price for the product.

The discount may be displayed as a separate entry on the bill or may be combined with the rate for the product to only show as one entry.

Discounts may be a one-time event or may have some duration (days, months, life of product, etc.). Discounts may apply to a specific customer or be generally available based on selection of products (for example - bundles). Discounting structures may involve tiers, tapers, or thresholds.

Product Balance Management

Process Identifier: 1.2.18

Hierarchy Level: 2

Brief Description:

Management of Product balances.

Extended Description:

This process is responsible for holding, calculating, applying policies and managing functionality/interfaces for the Product balances

Here the values resulting from rating and the application of discounts are applied to a Product balance. The balance affected by the value may be monetary or other balances such as minutes, points, or tokens. Authorizing service requests based on available balance is optional.

© TM Forum 2024. All Rights Reserved.

Figure 26: Product Balance Management Children

Manage Product Balance Containers

Process Identifier: 1.2.18.1

Hierarchy Level: 3

Brief Description:

Hold and maintain the different Product balances that a customer and/or a subscriber may have.

Extended Description:

This process manages the balance containers assigned to a Product and is used to keep track of usage events, providing input for decision making processes (such as product usage authorization) by means of the balance policies.

The containers include monetary and non-monetary balances (or shared) and are used as prepaid balances (enabling real-time product usage authorization), postpaid balances (in conjunction with an Account-Receivables [AR] application). Examples of non-monetary balances and allowances are: free minutes, WAP-only quota, etc.

© TM Forum 2024. All Rights Reserved.

Manage Product Balance Policies

Process Identifier: 1.2.18.2

Hierarchy Level: 3

Brief Description:

Executing policies per balance or balance type.

Extended Description:

Product Balance policies are rules that describe how balance affecting usages are to be handled. This is done by comparing the value of each usage against criteria such as the following:

- a minimum allowable balance limit (e.g. balance must remain above zero),

- balance expiration dates,

- balance thresholds actions and notifications and

- roll-over & cyclic policies.

Product Balance Operations Management

Process Identifier: 1.2.18.3

Hierarchy Level: 3

Brief Description:

Allow different operations to be performed on the managed balance.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Product Balance operations processes the charged events, using balance policies and then guides the results towards the relevant balance containers. Operations include :

- Reserving amounts from any balance for any session, and crediting unused reservations back into the balance, when a session is released.

- Updating balances by applying charges to the balance and credit/debit adjustments.

- Balance queries.

- Transferring amounts from one balance to another.

Authorize Transaction Based on Product Balance

Process Identifier: 1.2.18.4

Hierarchy Level: 3

Brief Description:

Manages authorization of product usage requests based on available balances (monetary or non-monetary) and policies.

Extended Description:

This process may include Product balance reservation and must be performed online.

Subsequent balance updates are not required to be done in real-time. In this context a usage is provided by the network, e.g. voice call. Product might be a digital content delivered via the network, e.g. content such as music, games, etc.

Product Catalog Planning Management

Process Identifier: 1.2.19

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 2

Brief Description:

Product Catalog Planning Management business process covers a set of business activities that understand and enable establish the plan to define, design and operationalize a catalog in order to meet the needs and objectives of Product cataloging.

Extended Description:

Product Catalog Planning Management business process covers a set of business activities that understand and enable establish the plan to define, design and operationalize a catalog in order to meet the needs and objectives of Product cataloging.

The Product Catalog Planning Management business process ensure that the organization is able to identify the most appropriate scheme and goal for it catalog. It includes designing the Catalog plan and developing the specification according to Product management requirement.

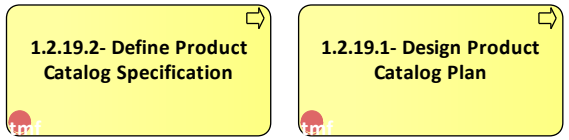

Figure 27: Product Catalog Planning Management Children

Design Product Catalog Plan

Process Identifier: 1.2.19.1

Hierarchy Level: 3

Brief Description:

Design Catalog Plan business activity understands requirements and capabilities demanded from the business to establish the Catalog plan based on the Product strategy for Product Catalog Planning Management.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Product Design Catalog Plan business activity understands requirements and capabilities demanded from the business to establish the Catalog plan based on the Product strategy for Product Catalog Planning Management.

Define Product Catalog Specification

Process Identifier: 1.2.19.2

Hierarchy Level: 3

Brief Description:

Define Catalog Specification business activity establishes the Catalog specifications based on the product/service/resource strategy to support Catalog Planning Management.

Extended Description:

Define Catalog Specification business activity establishes the Catalog specifications based on the product/service/resource strategy to support Catalog Planning Management.

Define Catalog Specification leverages Specification Management business activities to establish the mandatory and optional design requirements, as well as catalog entry fields according to product/service/resource management needs. This process will be governed by the Enterprise Business Process for Catalog Management.

Product Catalog Lifecycle Management

Process Identifier: 1.2.20

Hierarchy Level: 2

Brief Description:

© TM Forum 2024. All Rights Reserved.

Catalog Lifecycle Management business process covers a set of business activities that enable manage the lifecycle of an organizations catalog from design to build according to defined requirements.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Catalog Lifecycle Management business process covers a set of business activities that enable manage the lifecycle of an organizations catalog from design to build according to defined requirements.

Catalog Lifecycle Management proves the overarching governance to manage all the stages in the realization and operationalization of the Product/Service/Resource Catalog in support of the organizations business goals.

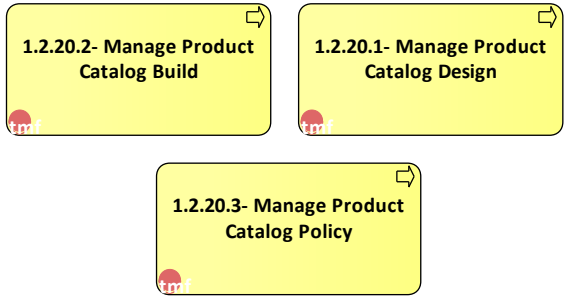

Figure 28: Product Catalog Lifecycle Management Children

Manage Product Catalog Design

Process Identifier: 1.2.20.1

Hierarchy Level: 3

Brief Description:

Manage Catalog Design business activity cover the design of the Catalog in accordance to the Catalog Management Lifecycle.

Extended Description:

Manage Catalog Design business activity cover the design of the Catalog in accordance to the Catalog Management Lifecycle.

© TM Forum 2024. All Rights Reserved.

Manage Catalog Design business activity will leverage Catalog Specification requirement for all information (features, attributes etc.) to be managed by the catalog in order to enable support the Catalog Lifecycle Management.

Manage Product Catalog Build

Process Identifier: 1.2.20.2

Hierarchy Level: 3

Brief Description:

Manage Catalog Design business activity covers the design of the Catalog in accordance to the Catalog Management Lifecycle.

Extended Description:

Manage Catalog Design business activity covers the design of the Catalog in accordance to the Catalog Management Lifecycle.

This business activity leverages input from the Catalog Design to construct the product/service/resource Catalog in order to meet the business operations goals.

Manage Product Catalog Policy

Process Identifier: 1.2.20.3

Hierarchy Level: 3

Brief Description:

Manage Catalog Build business activity establishes, manages and administers the governing of the catalog for operations readiness and operations.

Extended Description:

Manage Catalog Build business activity establishes, manages and administers the governing of the catalog for operations readiness and operations.

© TM Forum 2024. All Rights Reserved.

This business activity leverages support of the Enterprise governance processes for product/service/resource catalog lifecycle management.

Product Catalog Operational Readiness Management

Process Identifier: 1.2.21

Hierarchy Level: 2

Brief Description:

Product Catalog Operational Readiness Management business process establishes and administers the support needed to operationalize Product catalogs for ongoing day-to-day business needs.

Extended Description:

Product Catalog Operational Readiness Management business process establishes and administers the support needed to operationalize Product catalogs for ongoing day-to-day business needs.

These business activities implement the Product Catalog through Release and Deploy business activities.

Release Product Catalog business activity ensure all cross-functional activities needed to support catalog maintenance and operations, such as training and updating the support of the catalog are in place.

Release Product Catalog business activity includes identifying stakeholders, catalog integration, catalog federation etc. for any scenario in support of the organizations business goals, including Release conditions that support users, customers and business partners.

© TM Forum 2024. All Rights Reserved.

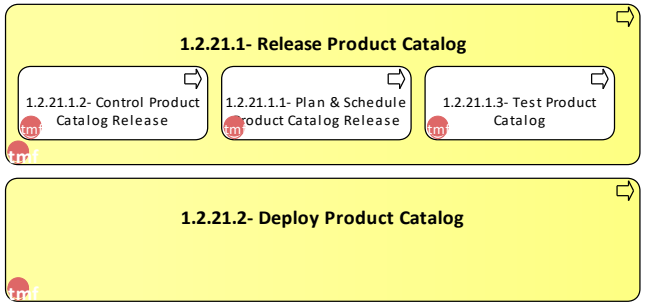

Figure 29: Product Catalog Operational Readiness Management Children

Deploy Product Catalog

Process Identifier: 1.2.21.2

Hierarchy Level: 3

Brief Description:

Deploy Product Catalog business activity manage the availability and use of the Product catalog in operations.

Extended Description:

Deploy Product Catalog business activity manage the availability and use of the Product catalog in operations.

Deploy Product Catalog business activity includes identifying stakeholders, creating catalog category hierarchies, catalog integration, and catalog federation for any scenario, such as with business partners and between business functions.

Release Product Catalog

Process Identifier: 1.2.21.1

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 3

Brief Description:

Release Product Catalog business activity ensure all cross-functional activities needed to support catalog maintenance and operations, such as training and updating the support of the catalog are in place.

Extended Description:

Release Product Catalog business activity ensure all cross-functional activities needed to support catalog maintenance and operations, such as training and updating the support of the catalog are in place.

Release Product Catalog business activity includes identifying stakeholders, catalog integration, catalog federation etc. for any scenario in support of the organizations business goals, including Release conditions that support users, customers and business partners.

Plan & Schedule Product Catalog Release

Process Identifier: 1.2.21.1.1

Hierarchy Level: 4

Brief Description:

Plan & Schedule Product Catalog Release business activity is used to handle the release plan for the Product Catalog.

Extended Description:

Plan & Schedule Product Catalog Release business activity is used to handle the release plan for the Product Catalog.

Control Product Catalog Release

Process Identifier: 1.2.21.1.2

Hierarchy Level: 4

© TM Forum 2024. All Rights Reserved.

Brief Description:

Control Product Catalog Release business activity is used to support the various catalog release tasks.

Extended Description:

Control Product Catalog Release business activity is used to support the various catalog release tasks.

Test Product Catalog

Process Identifier: 1.2.21.1.3

Hierarchy Level: 4

© TM Forum 2024. All Rights Reserved.

Brief Description:

Test Product Catalog business activity is used to establish the quality, reliability and performance requirement of the catalog according to the Product management needs.

Extended Description:

Test Product Catalog business activity is used to establish the quality, reliability and performance requirement of the catalog according to the Product management needs.

Product Catalog Content Management

Process Identifier: 1.2.22

Hierarchy Level: 2

Brief Description:

Product Catalog Content Management business process define and provide the business activities that support the day-to-day operations of Product Catalogs in order to realize the business operations goals.

Extended Description:

Product Catalog Content Management business process define and provide the business activities that support the day-to-day operations of Product Catalogs in order to realize the business operations goals.

Product Catalog Content Management business processes include administering the Product Catalog instance in production, maintaining catalog entries, assuring catalogs, managing catalog access, managing entry lifecycle through versioning, handling catalog entity entry and changes, supporting distribution of catalogs as needed, and supporting user-facing activities.

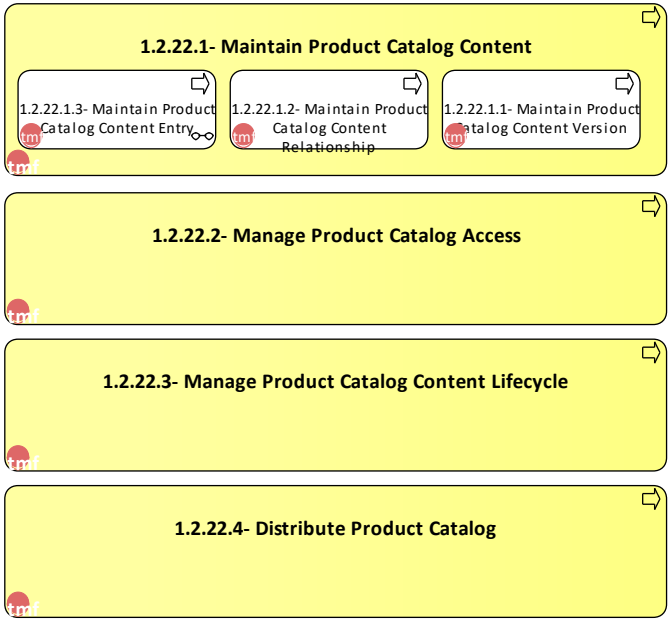

Figure 30: Product Catalog Content Management Children

Maintain Product Catalog Content

Process Identifier: 1.2.22.1

Hierarchy Level: 3

Brief Description:

Maintain Product Catalog Content business activity handles catalog content entry for adding or updating the operational Catalog by following the established Catalog Content Management operations standards and policies.

© TM Forum 2024. All Rights Reserved.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Maintain Product Catalog Content business activity handles catalog content entry through adding or updating the Catalog by following the established Catalog Content Management standards and policies.

Manage Catalog Entry support the following activities and sub-activities:

Maintaining Catalog Content Versions

Maintain Catalog Content Relationship

Maintain Catalog Content taxonomy

Organize Catalog Entry

Classify Catalog Entry

Maintain Product Catalog Content Version

Process Identifier: 1.2.22.1.1

Hierarchy Level: 4

Brief Description:

Maintain Product Catalog Content Version business activity handles tracking and controlling changes for Product catalog entries.

Extended Description:

Maintain Product Catalog Content Version business activity handles tracking and controlling changes for Product catalog entries.

Maintain Product Catalog Content Relationship

Process Identifier: 1.2.22.1.2

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 4

Brief Description:

Maintain Product Catalog Content Relationship business activity handles associating Product catalog entries.

Extended Description:

Maintain Product Catalog Content Relationship business activity handles associating Product catalog entries.

Catalog Content Relationship for Product catalog entries can be internal and external to the Product, Service or Resource domains.

Maintain Product Catalog Content Entry

Process Identifier: 1.2.22.1.3

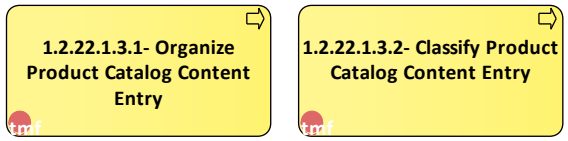
Hierarchy Level: 4

Brief Description:

Maintain Product Catalog Content Entry business activity handles content entry, content organization, content classification in the Product Catalog according to the Product Catalog model.

Extended Description:

Maintain Product Catalog Content Entry business activity handles content entry, content organization, content classification in the Product Catalog according to the Product Catalog model.



© TM Forum 2024. All Rights Reserved.

Figure 31: Maintain Product Catalog Content Entry Children

Organize Product Catalog Content Entry

Process Identifier: 1.2.22.1.3.1

Hierarchy Level: 5

Brief Description:

Organize Product Catalog Content Entry business activity handles Catalog Content organization according to the Product Catalog model.

Extended Description:

Organize Product Catalog Content Entry business activity handles Catalog Content organization according to the Product Catalog model.

Organize Catalog Content Entry business activities can include ordering, arranging, sorting, assembling, and grouping.

Classify Product Catalog Content Entry

Process Identifier: 1.2.22.1.3.2

Hierarchy Level: 5

Brief Description:

Classify Product Catalog Content Entry business activity specifically handles Catalog Content organization according to business classification characteristics for the Product Catalog.

Extended Description:

Classify Product Catalog Content Entry business activity specifically handles Catalog Content organization according to business classification characteristics for the Product Catalog.

© TM Forum 2024. All Rights Reserved.

Classify Product Catalog Content Entry is specific to shared qualities or characteristics defined by the organization.

Manage Product Catalog Access

Process Identifier: 1.2.22.2

Hierarchy Level: 3

Brief Description:

Manage Product Catalog Access business activity handles access to the catalog according to the Catalog Content Management standards and policies.

Extended Description:

Manage Product Catalog Access business activity handles access to the catalog according to the Catalog Content Management standards and policies.

Manage Product Catalog Access will handle assigning catalog managers and granting privileges.

Manage Product Catalog Content Lifecycle

Process Identifier: 1.2.22.3

Hierarchy Level: 3

Brief Description:

Manage Product Catalog Content Lifecycle business activity handles changes to catalog content according to the Catalog Content Management standards and policies.

Extended Description:

Manage Product Catalog Content Lifecycle business activity handles changes to catalog content according to the Catalog Content Management standards and policies.

© TM Forum 2024. All Rights Reserved.

Distribute Product Catalog

Process Identifier: 1.2.22.4

Hierarchy Level: 3

Brief Description:

Distribute Product Catalog business activity handles exchange and distribution of catalogs according to the Catalog Content Management standards and policies.

Extended Description:

Distribute Product Catalog business activity handles exchange and distribution of catalogs according to the Catalog Content Management standards and policies.

Product Specification Management

Process Identifier: 1.2.23

Hierarchy Level: 2

Brief Description:

Product Specification Management business process leverages captured product requirements to develop, master, analyze, and update documented standard and personalized conditions that must be satisfied by product design and/or delivery.

Extended Description:

Product Specification Management business process leverages captured product requirements to develop, master, analyze, and update documented standard and personalized conditions that must be satisfied by product design and/or delivery.

© TM Forum 2024. All Rights Reserved.

Product Specifications Management can result in establishing, in a centralized way, technical (know-how) standards for products. Such standards provide the organization with a means to control and approve the values and inputs of product specification through structure, review, approval and distribution processes to users (including customers and business partners).

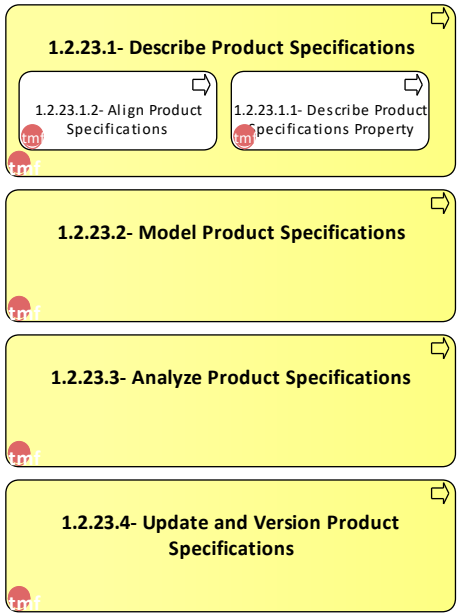


Figure 32: Product Specification Management Children

Describe Product Specifications

Process Identifier: 1.2.23.1

Hierarchy Level: 3

Brief Description:

© TM Forum 2024. All Rights Reserved.

Describe Product Specifications business activity identify and elaborate on the conditions for meeting product requirement in order to support assuring consistency, quality, functionality and fit for purpose products.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Describe Product Specifications business activity identify and elaborate on the conditions for meeting product requirement in order to support assuring consistency, quality, functionality and fit for purpose products.

Describing Product Specification can leverage captured product requirements and product preferences to build in tolerances for changes according to users of the products.

Describe Product Specifications Property

Process Identifier: 1.2.23.1.1

Hierarchy Level: 4

Brief Description:

Describe Product Specifications Property set out and develop the rules, constraints, models and the sets of principles on which the product specification can be modelled according to business and user requirements.

Extended Description:

Product Specification Property enumerate all the product specification attributes and their units, and documents requirements that provides product teams the information they need to build out or enhance features or functionality of products.

Align Product Specifications

Process Identifier: 1.2.23.1.2

Hierarchy Level: 4

Brief Description:

Align Product Specifications business activity handle the alignment, relationships and linkages of product specification to functional and non-functional requirement.

© TM Forum 2024. All Rights Reserved.

Extended Description:

Align Product Specifications business activity handle the alignment, relationships and linkages of product specification to functional and non-functional requirement.

The alignment of product specifications can be to other products as well as realization of the specific services and resource according to business objectives (e.g. cost, other accounting and non-accounting requirements etc.).

Model Product Specifications

Process Identifier: 1.2.23.2

Hierarchy Level: 3

Brief Description:

Model Product Specification business activity is in charge of determining independent product specifications variables to include and exclude from asserting the product specifications relationships and connections.

The need for modelling product specifications often begins when a product manager seeks to define the relationship between independent product variables and the dependent product variable.

Extended Description:

Model Product Specification business activity is in charge of determining independent product specifications variables to include and exclude from asserting the product's specification relationships and connections.

The need for modelling product specifications often begins when a product manager seeks to define the relationship between independent product variables and the dependent product variable.

This business activity is used by organizations to establish and manage the collection of standardized, pre-documented product specifications and their dependencies to guide Lifecycle Management and Operations.

© TM Forum 2024. All Rights Reserved.

Analyze Product Specifications

Process Identifier: 1.2.23.3

Hierarchy Level: 3

Brief Description:

Analyze Product Specifications business activity research, assess and evaluate performance criteria and factors to develop, master, control and update in products specifications, according to ongoing requirements.

Extended Description:

Analyze Product Specifications business activity research, assess and evaluate performance criteria and factors to develop, master, control and update in products specifications, according to ongoing requirements.

This business activity can include multiple analyzes of product specifications, including standard analysis (based on empirical research) or custom analysis (based on other standards). Analysis of Service Specification include testing product specifications, and the ability to meet business requirements, as well as conformance to operational mandates.

Update and Version Product Specifications

Process Identifier: 1.2.23.4

Hierarchy Level: 3

Brief Description:

Update Product Specification business activity updates, tracks and versions changes to existing product specifications according to versioning policies to support product requirement management and product's operational activities.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Update Product Specification business activity updates, tracks and versions changes to existing product specifications according to versioning policies to support product requirement management and product's operational activities.

This business activity manages all changes to product specifications over their lifecycle. As part of this business activity, Product Specification versioning is a sub-activity which ensures communicating changes to product specifications, so that product planners and consumers know what to expect. It includes communicating when changes are made to product specification properties.

Product Anomaly Lifecycle Management

Process Identifier: 1.2.24

Hierarchy Level: 2

Brief Description:

Product Anomaly Lifecycle Management business process establishes and controls all activities that are involved in overseeing, directing, administering, controlling and organizing the definition, detection/prediction, mitigation and learnings related to P

Extended Description:

Product Anomaly Lifecycle Management business process establishes and controls all activities that are involved in overseeing, directing, administering, controlling and organizing the definition, detection/prediction, mitigation and learnings related to Product Anomaly Management.

Product Anomaly Lifecycle Management cover the lifecycle activities, including:

Establishing “what is normal” for a active product (buy, sell, care) in order to inform “deviations” or aberrations.

Orchestrating Product Anomaly Management activities to meet customer and business partner needs.

Managing the ability to acquire and apply knowledge and skills from past and present product anomalies.

Managing actions that make the best or effective use of Product Management Closed Loops.

Monitoring feedback to and from Product Management to support Product Anomaly Management activities.

© TM Forum 2024. All Rights Reserved.

Reporting on Product Anomaly Management Closed Loops.

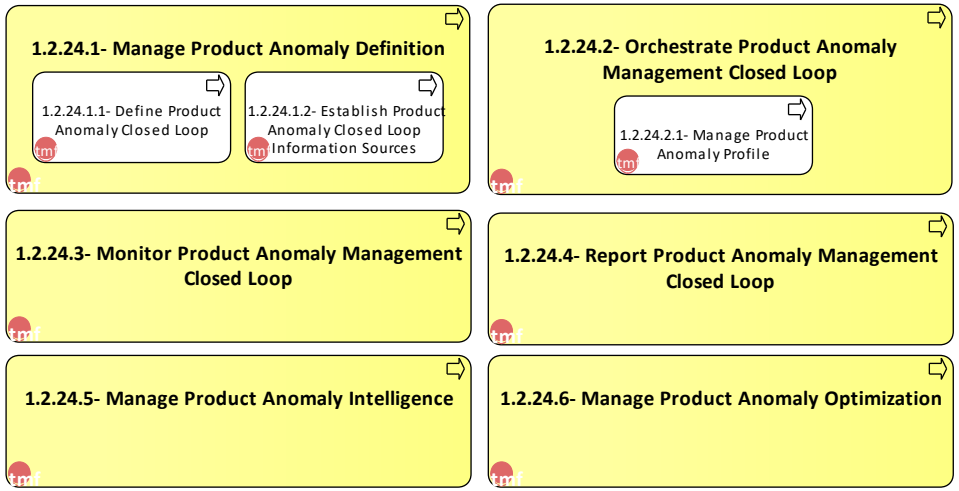

Figure 33: Product Anomaly Lifecycle Management Children

Manage Product Anomaly Definition

Process Identifier: 1.2.24.1

Hierarchy Level: 3

Brief Description:

Manage Product Anomaly Definition business activity is in charge of defining and describing the information about data which is used in Product Anomaly Management.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Manage Product Anomaly Definition business activity is in charge of defining and describing the information about data which is used in Product Anomaly Management.

Product Manage Anomaly Definition business activity covers activities that describe the criteria, characteristics, and expectations of information required for Product Anomaly Detection. Any descriptions and definitions of the information about data use in Product Anomaly Management business activities may include, but not be limited to "normal pattern data", "constraints data", "goals data" etc.

Define Product Anomaly Closed Loop

Process Identifier: 1.2.24.1.1

Hierarchy Level: 4

Brief Description:

Define Product Anomaly Closed Loop business activity state and describe the Product Anomaly Closed Loops along with associated information that lead to identifying, detecting or predicting a Product Anomaly.

Extended Description:

Define Product Anomaly Closed Loop business activity state and describe the Product Anomaly Closed Loops along with associated information that lead to identifying, detecting or predicting a Product Anomaly.

This business activity supports Anomaly definition process and the Closed Loops associated, including all associated inputs that reasonably affect the management of an Anomaly Lifecycle. This activity also ensures that the organization understands, and has well-defined operational workflows underpinning Anomaly Management.

Establish Product Anomaly Closed Loop Information Sources

Process Identifier: 1.2.24.1.2

Hierarchy Level: 4

Brief Description:

© TM Forum 2024. All Rights Reserved.

Establish Product Anomaly Closed Loop Information Sources business activity identifies all information sources and the requisite data that must be managed to support Product Anomaly Management Closed Loops.

Extended Description:

Establish Product Anomaly Closed Loop Information Sources business activity identifies all information sources and the requisite data that must be managed to support Product Anomaly Management Closed Loops.

Establish Product Anomaly Closed Loop Information Sources help to identify the information (not limited to business and operations rules), business logic, levels of classification (by importance, by period etc.), impact and urgency etc. that can help detect Product Anomaly. This process supports Product Anomaly Management during day-to-day operations.

Orchestrate Product Anomaly Management Closed Loop

Process Identifier: 1.2.24.2

Hierarchy Level: 3

Brief Description:

Orchestrate Product Anomaly Management Closed Loop business activity is in charge of organizing, arranging and coordinating changes that control Product Anomaly Closed Loops.

Extended Description:

Orchestrate Product Anomaly Management Closed Loop business activity is in charge of organizing, arranging and coordinating changes that control Product Anomaly Closed Loops.

This business activity will cover:

Managing Product Anomaly Detection activities - initiating, suspending, maintaining, and terminating.

Organizing Product Anomaly Detection activities - including arranging the sequence for Closed Loop activities.

© TM Forum 2024. All Rights Reserved.

Coordinating changes to a Product Anomaly Management Closed Loop.

Manage Product Anomaly Profile

Process Identifier: 1.2.24.2.1

Hierarchy Level: 4

Brief Description:

Manage Product Anomaly Profile business activity is in charge of recording and analyzing Product Anomaly Management frameworks in order to enable assess and predict Anomaly Management capabilities according to well-specified models.

Extended Description:

Manage Product Anomaly Profile business activity is in charge of recording and analyzing Product Anomaly Management frameworks in order to enable assess and predict Anomaly Management capabilities according to well-specified models.

Manage Product Anomaly Profile supports Product Anomaly Management operations, as well as capturing the business intents that need to be associated with Product Anomaly Closed Loops and Product Anomaly Management Lifecycle.

Monitor Product Anomaly Management Closed Loop

Process Identifier: 1.2.24.3

Hierarchy Level: 3

Brief Description:

Monitor Product Anomaly Management Closed Loop business activity provides the capability to observe Product Anomaly Management Closed Loops.

Extended Description:

Monitor Product Anomaly Management Closed Loop business activity provides the capability to observe Product Anomaly Management Closed Loops.

© TM Forum 2024. All Rights Reserved.

This business activity helps to scan; watch; monitor; gain awareness of Product Anomaly Management activities that close the loop in an Product Anomaly Management Lifecycle(s).

Report Product Anomaly Management Closed Loop

Process Identifier: 1.2.24.4

Hierarchy Level: 3

Brief Description:

Report Product Anomaly Management Closed Loop business activity documents information organized to deliver an account of any, and all Product Anomaly Closed Loops.

Extended Description:

Report Product Anomaly Management Closed Loop business activity documents information organized to deliver an account of any, and all Product Anomaly Closed Loops.

Anomaly Closed Loops may fall into either or across any of the four stages in any of the overarching Closed Loop pattern - Observe, Orient, Decide and Act - or other variations.

Manage Product Anomaly Intelligence

Process Identifier: 1.2.24.5

Hierarchy Level: 3

Brief Description:

Manage Product Anomaly Intelligence business activity is in charge of acquiring and applying new learning, knowledge and skills to Product Anomaly Management.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Manage Product Anomaly Intelligence business activity is in charge of acquiring and applying new learning, knowledge and skills to Product Anomaly Management.

This business activity supports improving, optimizing, or evolving Product Anomaly Management activities. Manage Product Anomaly Intelligence helps to incorporate new knowledge and skills into Product Anomaly Management processes. This is as well to enable improvement and optimization of Anomaly Management in a continuum.

Manage Product Anomaly Optimization

Process Identifier: 1.2.24.6

Hierarchy Level: 3

Brief Description:

Manage Product Anomaly Optimization business activity is in charge of actions that make the best and most effective use of Product Anomaly Management activities to improve Product Anomaly Management.

Extended Description:

Manage Product Anomaly Optimization business activity is in charge of actions that make the best and most effective use of Product Anomaly Management activities to improve Product Anomaly Management.

Manage Product Anomaly Optimization business activity can manage the business logic and business rules associated with Product Anomaly Detection, Product Anomaly Assessment, Product Anomaly Forecasting and Prediction, Product Anomaly Mitigation, as well as underlying Product Knowledge Management.

This business activity also includes fine-tuning of business logic, operations logic, business and operations rules that improve efficiency of Anomaly Management as a whole.

Product Anomaly Management

Process Identifier: 1.2.25

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 2

Brief Description:

Product Anomaly Management business processes establish actions that predict and detect aberrations or outlier events/activities, assess them for their impact, mitigate them, and record them before they ever become product problem management concerns.

Extended Description:

Product Anomaly Management business processes establish actions that predict and detect aberrations or outlier events/activities, assess them for their impact, mitigate them, and record them before they ever become product problem management concerns.

By establishing that an action or event is abnormal (based on known patterns), Product Anomaly Management helps to assess them through a set of activities that may triage, plan detailed assessment, classify them and provide mitigatory actions for them. Through Product Anomaly Management, assurance of Products, based on abnormal events or activities can be well categorized, prioritized and actioned on. Product Anomaly Management is different from Product Problem Management as the later addresses known issues, faults or problems.

© TM Forum 2024. All Rights Reserved.

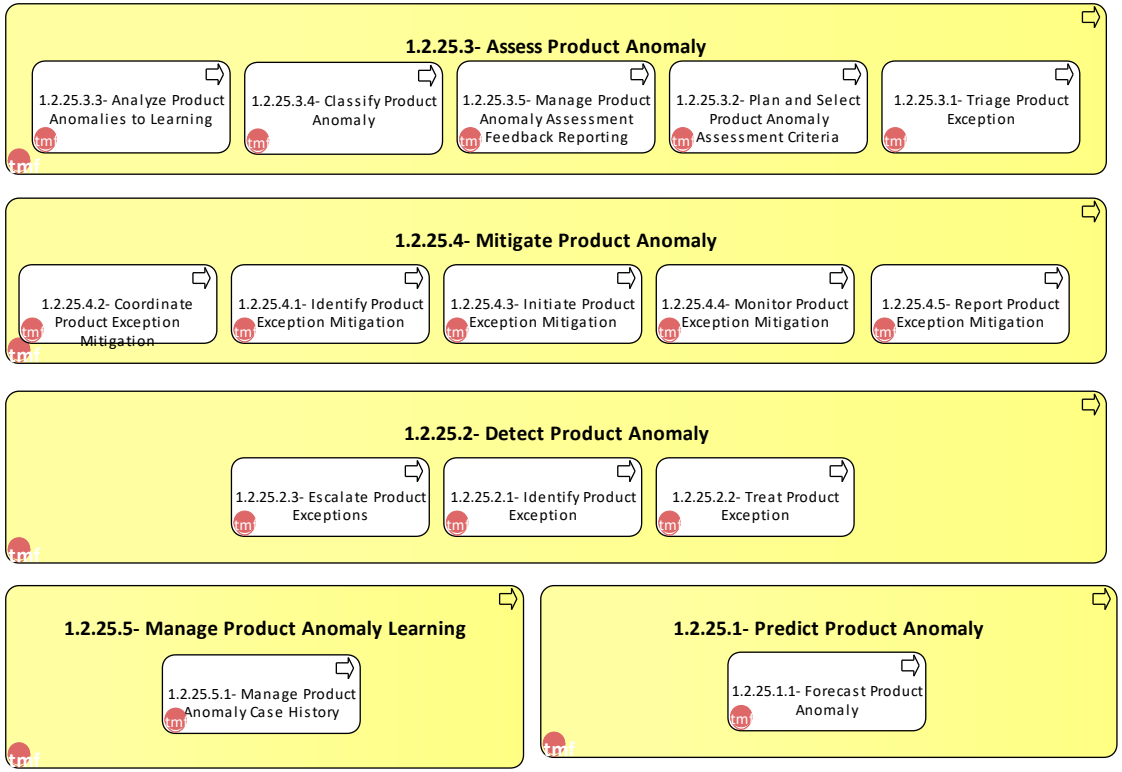

Figure 34: Product Anomaly Management Children

Predict Product Anomaly

Process Identifier: 1.2.25.1

Hierarchy Level: 3

Brief Description:

© TM Forum 2024. All Rights Reserved.

Predict Product Anomaly business activity is in charge of declaring or indicating in advance (or foretells on the basis of product buy-use-sell observation, product use experience or reason) upcoming exceptions, as well as trends that can lead to outlier activities / events or problems.

Extended Description:

Predict Product Anomaly business activity is in charge of declaring or indicating in advance (or foretells on the basis of product buy-use-sell observation, product use experience or reason) upcoming exceptions, as well as trends that can lead to outlier activities / events or problems.

Product Anomaly Prediction business activity can help to detect and interpret early activities or events with their impending exceptions while suggesting causes.

Forecast Product Anomaly

Process Identifier: 1.2.25.1.1

Hierarchy Level: 4

Brief Description:

Forecast Product Anomaly business activity predicts future Product anomaly along with implications using historical, and /or ongoing patterns observed through exceptions.

Extended Description:

Forecast Product Anomaly business activity predicts future Product anomaly along with implications using historical, and /or ongoing patterns observed through exceptions.

Forecast Product Anomaly business activity may include what-if analysis, or impact analysis of the anomalous exceptions. Forecast Product Anomaly business activity supports the identification of potential risks of an exception, and the course of action needed to avoid potential risks.

Detect Product Anomaly

Process Identifier: 1.2.25.2

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 3

Brief Description:

Detect Product Anomaly business activity identify Product (buy/use/care) activities that are a deviation (aberrations or abnormal actions/events) from well-define norms or expectations.

Extended Description:

Detect Product Anomaly business activity identify Product (buy/use/care) activities that are a deviation (aberrations or abnormal actions/events) from well-define norms or expectations.

Product Anomaly Detection finds patterns in Product Management activities, as well as with engaged parties given a deviation from planned, or expected business objectives or goals.

Identify Product Exception

Process Identifier: 1.2.25.2.1

Hierarchy Level: 4

Brief Description:

Identify Product Exceptions business activity supports the detection of Product Anomaly by investigating (recognizing and establishing) particular activity or event as an exception.

Extended Description:

Identify Product Exception business activity supports the detection of Product Anomaly by investigating (recognizing and establishing) particular activity or event as an exception.

Identify Product Exception business activity will support all Product Anomaly Management business activities - Assess Product Anomaly, Predict Product Anomaly, Mitigate Product Anomaly and Learn Product Anomaly.

© TM Forum 2024. All Rights Reserved.

Treat Product Exception

Process Identifier: 1.2.25.2.2

Hierarchy Level: 4

Brief Description:

Treat Product Exception business activity provides the set of actions that support managing a products' anomalous exception.

Extended Description:

Treat Product Exception business activity provides the set of actions that support managing a products' anomalous exception.

This covers actions that may be:

Proactive: Where the treatment of the conditions leading from the exception are controlled;

Reactive: Where the treatment is directly in response to the exception.

Treat Product Exceptions business activity helps to outline a series of actions that can expedite decisions for mitigation.

Escalate Product Exceptions

Process Identifier: 1.2.25.2.3

Hierarchy Level: 4

Brief Description:

Escalate Product Exception business activity is in charge of increasing the attention given to handling of a Product Exception.

Extended Description:

Escalate Product Exception business activity is in charge of increasing the attention given to handling of a Product Exception.

© TM Forum 2024. All Rights Reserved.

Escalating a Product's exception may be based on several factors, including defined business rules of escalation, or the lack thereof for handling a product's exception.

Assess Product Anomaly

Process Identifier: 1.2.25.3

Hierarchy Level: 3

Brief Description:

Assess Product Anomaly business activity check, estimate, appraise and evaluate Product anomaly observations to determine implications and follow-on treatment.

Extended Description:

Assess Product Anomaly business activity check, estimate, appraise and evaluate Product anomaly observations to determine implications and follow-on treatment.

Assess Product Anomaly ensures that the business can ascertain understanding of a product's anomalous activity, its extent/scale, cause and effect, and provide evidence-based information to develop courses of action.

Triage Product Exception

Process Identifier: 1.2.25.3.1

Hierarchy Level: 4

Brief Description:

Triage Product Exception business activity is in charge of identifying and assigning the degrees of urgency, and the order of treatment of products' anomalous exceptions.

Extended Description:

© TM Forum 2024. All Rights Reserved.

Triage Product Exception business activity is in charge of identifying and assigning the degrees of urgency, and the order of treatment of products' anomalous exceptions.

Triage Product Exceptions sub activities may include prioritizing exceptions and underlying product anomaly events while examining causes that enable apply an initial set of mediatory actions.

Plan and Select Product Anomaly Assessment Criteria

Process Identifier: 1.2.25.3.2

Hierarchy Level: 4

Brief Description:

Plan and Select Product Anomaly Assessment Criteria business activity define the course of action to assess a product anomaly, along with organizing the product's anomaly assessment criteria in order to best facilitate detection and mitigation of anomalies.

Extended Description:

Plan and Select Product Anomaly Assessment Criteria business activity define the course of action to assess a product anomaly, along with organizing the product's anomaly assessment criteria in order to best facilitate detection and mitigation of anomalies.

The 'Plan and Select Assessment Criteria' process helps the organization to optimize the approaches to assess product anomaly criteria in order to continually avoid impact of false positives and false negatives in the detection of product anomalies.

Analyze Product Anomalies to Learning

Process Identifier: 1.2.25.3.3

Hierarchy Level: 4

Brief Description:

© TM Forum 2024. All Rights Reserved.

Analyze Product Anomalies to Learning business activity establish actions to discover and correlate anomalous behavior to 'learned normal' or 'expected behavior'.

Extended Description:

Analyze Product Anomalies to Learning business activity establish actions to discover and correlate anomalous behavior to 'learned normal' or 'expected behavior'.

Analyze Product Anomalies to Learning sub activities help to enrich the organization's Anomaly Detection activities altogether, which can result in a reduction in the time to detect, triage and treat product anomalies.

Classify Product Anomaly

Process Identifier: 1.2.25.3.4

Hierarchy Level: 4

Brief Description:

Classify Product Anomaly business activity establish ways to organize product anomalies into established categories according to business priorities and objectives.

Extended Description:

Classify Product Anomaly business activity establish ways to organize product anomalies into established categories according to business priorities and product management objectives.

Classify Product Anomaly includes establishing robust classification models that help to triage anomalies, determine communication needs, determine and measure impact, and report on product anomalies.

Manage Product Anomaly Assessment Feedback Reporting

Process Identifier: 1.2.25.3.5

© TM Forum 2024. All Rights Reserved.

Hierarchy Level: 4

Brief Description:

Manage Product Anomaly Assessment Feedback Reporting business activity is in charge of establishing and handling the activities that prepare and report the feedback based of Product Anomaly Assessment activity.

Extended Description:

Manage Product Anomaly Assessment Feedback Reporting business activity is in charge of establishing and handling the activities that prepare and report the feedback based of Product Anomaly Assessment activity.

Manage Product Anomaly Assessment Feedback business activity covers tasks that prepare and report feedback of an Anomaly Assessment activity. This business activity is also helpful in supporting the optimization of the Anomaly Detection business activity, such as fine-tuning know-how for product anomaly detection.

Reports generated from this business activity can be utilized for Product Anomaly Mitigation and can help to select the consequent actions required to mitigate a product anomaly.

Mitigate Product Anomaly

Process Identifier: 1.2.25.4

Hierarchy Level: 3

Brief Description:

Mitigate Product Anomaly business activity is in charge of allaying or alleviate the impact of a product's anomalous exception.

Extended Description:

Mitigate Product Anomaly business activity is in charge of allaying or alleviate the impact of a product's anomalous exception.

© TM Forum 2024. All Rights Reserved.

Mitigate Product Anomaly identify and coordinate mitigatory actions required for product's anomalous exceptions, including the initiation of remedial actions, and providing support to monitor and report on the mitigatory action.

Mitigate Product Anomaly can ensure the effect of a detected anomalous exception is minimized or resolved through appropriate actions. The aim of this business activity is to reduce Product Problem Management occurrence.

Identify Product Exception Mitigation

Process Identifier: 1.2.25.4.1

Hierarchy Level: 4

Brief Description:

Identify Product Exception Mitigation business activity helps to map product's anomalous exceptions with actions that will reduce impact to business.

Extended Description:

Identify Product Exception Mitigation business activity helps to map product's anomalous exceptions with actions that will reduce impact to business.

Identifying product exception and their mitigatory action involves tasks that may leverage established business policies and constraints, and/or be based on knowledge and skills related to context.

This business activity helps to incorporate the right treatment based on the importance, impact or risk factors involved in a products operation. Any treatment of this nature can be static, based on pre-defined business rules, or dynamic based on skills and knowledge derived from context.

Coordinate Product Exception Mitigation

Process Identifier: 1.2.25.4.2

Hierarchy Level: 4

© TM Forum 2024. All Rights Reserved.

Brief Description:

Coordinate Product Exception Mitigation business activity is in charge of managing the different activities of an exception mitigation plan all together to successfully realize a mitigation plan.

Extended Description:

Coordinate Product Exception Mitigation business activity is in charge of managing the different activities of an exception mitigation plan all together to successfully realize a mitigation plan.

Initiate Product Exception Mitigation

Process Identifier: 1.2.25.4.3

Hierarchy Level: 4

Brief Description:

Initiate Product Exception Mitigation business activity is in charge of starting the correct activities that mitigate product anomaly exceptions, cognizant of business requirement and goals.

Extended Description:

Initiate Product Exception Mitigation business activity is in charge of starting the correct activities that mitigate product anomaly exceptions, cognizant of business requirement and goals.

Initiate Product Exception Mitigation actions include recommendations for course of actions, fostering dynamic execution of actions, and/or scheduling actions based on predetermined business conditions and policies.

Monitor Product Exception Mitigation

Process Identifier: 1.2.25.4.4

Hierarchy Level: 4

© TM Forum 2024. All Rights Reserved.

Brief Description:

Monitor Product Exception Mitigation business activity is in charge of observing, checking and keeping a continuous records of mitigatory actions that support Product Anomaly Management.

Extended Description:

Monitor Product Exception Mitigation business activity is in charge of observing, checking and keeping a continuous records of mitigatory actions that support Product Anomaly Management.

Monitor Product Exception Mitigation covers the action and data that are involved (including collection and analysis on predefined set of information – e.g. KPIs etc.) in Product Anomaly Management business activities, tasks and workflows.

Report Product Exception Mitigation

Process Identifier: 1.2.25.4.5

Hierarchy Level: 4

Brief Description:

Report Product Exception Mitigation business activity is in charge of providing an account (documented or otherwise) of mitigatory actions taken to lessen or reduce the impact of a product anomaly.

Extended Description:

Report Product Exception Mitigation business activity is in charge of providing an account (documented or otherwise) of mitigatory actions taken to lessen or reduce the impact of a product anomaly.

Reporting on Product Exception Mitigation may follow well-defined business and operations criteria, or predefined set of metrics (KPIs etc.) that are underlying to mitigate anomaly business activity.

© TM Forum 2024. All Rights Reserved.

Manage Product Anomaly Learning

Process Identifier: 1.2.25.5

Hierarchy Level: 3

Brief Description:

Manage Product Anomaly Learning business activity is in charge of capturing, or acquiring knowledge and skill related to handled anomalous exceptions (from detection, through assessment to mitigation).

Extended Description:

Manage Product Anomaly Learning business activity is in charge of capturing, or acquiring knowledge and skill related to handled anomalous exceptions (from detection, through assessment to mitigation).

Manage Anomaly Learning business activity ensure that knowledge and skills gained from product anomalies can aide future Product Anomaly Management activities.

Manage Product Anomaly Case History

Process Identifier: 1.2.25.5.1

Hierarchy Level: 4

Brief Description:

Manage Product Anomaly Case History business activity records all past information on Product Anomaly events, Product Anomaly Management activities and data underlying, and representing Product Anomaly cases.

Extended Description:

Manage Product Anomaly Case History business activity records all past information on Product Anomaly events, Product Anomaly Management activities and data underlying, and representing Product Anomaly cases.

© TM Forum 2024. All Rights Reserved.

Manage Product Anomaly Case History includes the maintenance of past and present records, all artifacts, knowledge-base (e.g. the specifications, profiles, exception patterns, action patterns etc.) and versioned information.

This business activity supports the organization to maintain skills and learning repository to identify and predict Anomalous Exception patterns and mitigatory actions.

Product Problem Management

Process Identifier: 1.2.26

Hierarchy Level: 2

Brief Description:

Product Problem Management process is in charge of directing and controlling activities that identify, triage, discover causes, report and close product problems (cases, issues, challenges and faults etc.).

Extended Description:

Product Problem Management process is in charge of directing and controlling activities that identify, triage, discover causes, report and close product problems (cases, issues, challenges and faults etc.).

Product Problem Management ensures that products that are commercially offered by the organization can be assured to meet the goals and objectives of their design. The objective of this processes is to respond to product challenges/concerns/issues/cases and offer answers/resolution to them.

The goal of this process is mediate the impact, or resolve the concerns that impact Marketing and Sales objectives.

© TM Forum 2024. All Rights Reserved.

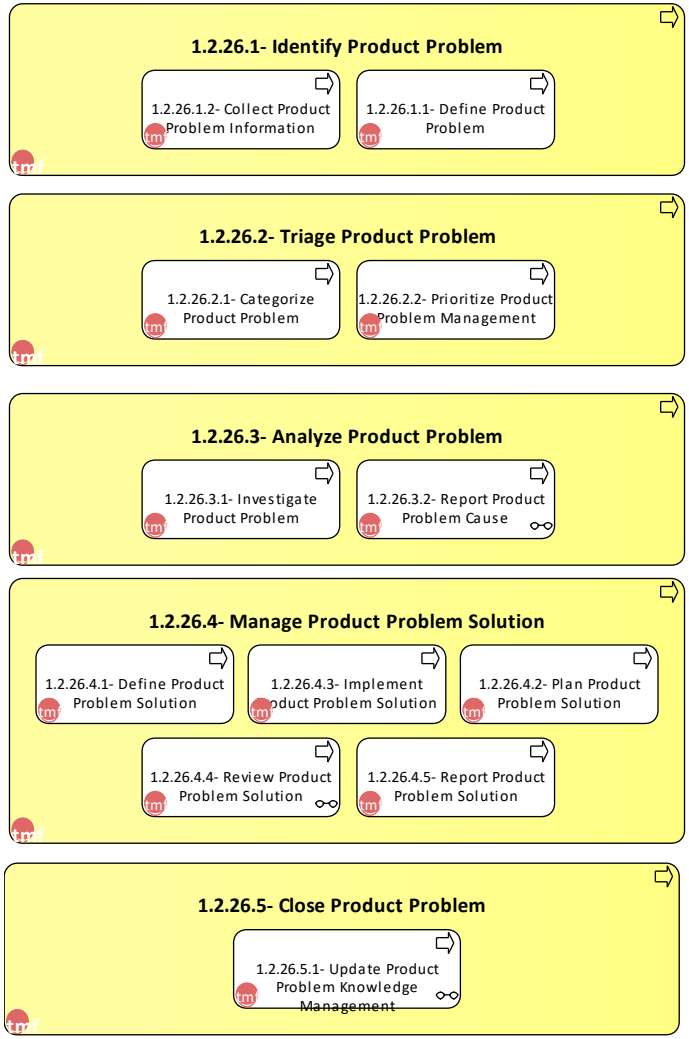

Figure 35: Product Problem Management Children

© TM Forum 2024. All Rights Reserved.

Identify Product Problem

Process Identifier: 1.2.26.1

Hierarchy Level: 3

Brief Description:

Identify Product Problem business activity is in charge of establishing a product case/concern/issues or challenge.

Extended Description:

Identify Product Problem business activity is in charge of establishing a product case/concern/issues or challenge.

Identify Product Problem includes activities that clearly define product problem and collect information that relevantly described the existence of the problem.

This business activity may include tasks that measure or assess problem to determine whether a problem (i.e., discrepancy) exists.

Define Product Problem

Process Identifier: 1.2.26.1.1

Hierarchy Level: 4

Brief Description:

Define Product Problem business activity is in charge of describing a product problem.

Extended Description:

Define Product Problem business activity is in charge of describing a product problem.

© TM Forum 2024. All Rights Reserved.

This business activity supports identifying product problem by leveraging collected product information to clearly describe the product problem for subsequent resolution.

Collect Product Problem Information

Process Identifier: 1.2.26.1.2

Hierarchy Level: 4

Brief Description:

Collect Product Problem Information business activity is in charge of gathering all data/information that enable establish a product problem.

Extended Description:

Collect Product Problem Information business activity is in charge of gathering all data/information that enable establish a product problem.

Analyze Product Problem

Process Identifier: 1.2.26.3

Hierarchy Level: 3

Brief Description:

Analyze Product Problem business activity is in charge of investigating product problems, discovering product problem cause and providing relevant reports to outline problem product cause.

Extended Description:

Analyze Product Problem business activity is in charge of investigating product problems, discovering product problem cause and providing relevant reports to outline problem product cause.

© TM Forum 2024. All Rights Reserved.

This business activity is key to identify appropriate solutions to product problems, and inform the right plan of action to resolve product problems.

Investigate Product Problem

Process Identifier: 1.2.26.3.1

Hierarchy Level: 4

Brief Description:

Investigate Product Problem business activity is in charge of observing and identifying the cause of a product problem.

Extended Description:

Investigate Product Problem business activity is in charge of observing and identifying the cause of a product problem.

Investigate Product Problem includes tasks that study and examine product problems and associated information in order to discover product problem cause.

Report Product Problem Cause

Process Identifier: 1.2.26.3.2

Hierarchy Level: 4
