RESOURCE DOMAIN

GB991 §1.1.1.6

"What runs underneath" — infrastructure realizing Services

Management

Annual and multi-year resource strategies; v25.5 carries AI-readiness guidance

v24.0 rename

`cap-resource-strategy`

Test management strategy
Define test types per business activity; analyze test quality offline
L3 1.5.1.8 + 1.5.1.9
`cap-resource-strategy-test`

Delivery

Deploy new and enhanced technology and resources; logical and physical

`cap-resource-capability-delivery`

1.5.14 Resource Capacity Management
Plan / forecast / optimize resource capacity vs business objectives

net-new v25.5

`cap-resource-capacity`

1.5.18 Resource Catalog Planning Mgmt
Design the catalog scheme; define the Resource Catalog Specification

net-new v25.5

`cap-resource-catalog-planning`

1.5.19 Resource Specification Mgmt
Develop / master / analyze + version Resource Specifications (ongoing maintenance)

net-new v25.5

`cap-resource-specification`

Lifecycle Mgmt

Same — with explicit 4-step Exit decomposition (Resource decommissioning is heavier)

R20.5 lineage
v24.0 rename

`cap-resource-specification-lifecycle`

Test catalogue dev & retirement
Specify each Resource Test; base of cross-PSR test composition stack
L3 1.5.3.8 (new in v25.5)
`cap-resource-specification-lifecycle-test`

Resource end-of-life management
Identify unviable resources; impacted customers; transition strategies; manage exit
L3 1.5.3.7 (4 L4s — PSR-asymm)
`cap-resource-specification-lifecycle-exit`

1.5.15 Resource Catalog Lifecycle Mgmt
Catalog implementation lifecycle: design → build → policy

net-new v25.5

`cap-resource-catalog-lifecycle`

1.5.20 Resource Anomaly Lifecycle Mgmt
Define / orchestrate / monitor Anomaly Closed Loops (OODA-anchored governance)

net-new v25.5

`cap-resource-anomaly-lifecycle`

Management

Operational substrate for all Resource FAB; workforce establishment lives here

v23.5 / v24.0 renames

`cap-resource-support`

Security & risk responsibilities
Vulnerability mgmt, threat assessments, risk assessments + mitigation
L2 responsibilities block
`cap-resource-support-security`

Workforce management (establishment)
Manage field workforce roster, skills, training (establishment side)
L3 1.5.4.8 Manage Field Workforce
`cap-resource-support-workforce`

Inventory management
Manage Resource Inventory DB + processes; track; identify issues
L3 1.5.4.5 (3 L4s — PSR-asymm)
`cap-resource-support-inventory`

Test management
Execute end-to-end resource tests; bottom of cross-PSR test composition
L3 1.5.4.9
`cap-resource-support-test`

1.5.7* Resource Data Management
Collect / distribute / manage resource data across all OFAB verticals

v23.5 rename
multi-vertical

`cap-resource-data`

1.5.16 Resource Catalog — Operational Readiness
Operate the Resource Catalog as a production service

`cap-resource-catalog-operational-readiness`

1.5.17 Resource Catalog — Content
Manage what's in the published Resource Catalog

`cap-resource-catalog-content`

Management

Capture / schedule / allocate resource orders; work-order execution

R20.5 rename
multi-vertical

`cap-resource-order`

Workforce-related work orders (execution)
Allocate work orders to field workforce per resource order (execution side)
L3 1.5.5.7 Manage Resource Work Order
`cap-resource-order-workforce`

Management

Detect / isolate / fix resource faults; convergence for alarms + performance

`cap-resource-trouble`

1.5.9 Resource Performance Management
Monitor / measure / report on resource KPIs

`cap-resource-performance`

1.5.21 Resource Anomaly Management
Predict / detect / assess / mitigate resource anomalies

`cap-resource-anomaly`

& Reporting

Pre-billing mediation of resource usage events

`cap-resource-mediation-and-reporting`

Layout — read it like a roadmap

- **Left to right**: OSS modernisation Lifecycle progression — Strategy formation → Capability building → Lifecycle artefact production (BVD) → Operational readiness → Day-to-day operations → Billing.
- **Top to bottom**: PSR-paired comparison — every Service capability sits directly above its Resource peer in the same vertical.

Legend

- S2R area cells (3 verticals: Strategy / Capability Mgmt / BVD)
- Operations area cells (4 verticals: ORS / Fulfillment / Assurance / Billing)
- L2 capability anchor — S2R area (16)
- L2 capability anchor — Operations area (17)
- H5 sub-capability nested in parent L2 (14 total)

Inventory totals

S2R L2 anchors	16
S2R H5 anchors	6
Operations L2 anchors	17
Operations H5 anchors	8
Total stable heat-map anchors	**47**

- **Vertical band tint**: blue cells = S2R area (what to build); green cells = Operations area (day-to-day).
- **L2 box border colour**: matches its Lifecycle Area for cross-area visual scanning.

* 1.5.5 spans Fulfillment + ORS; 1.5.7 spans all four OFAB verticals. Placed under primary vertical.

Sister layout (verticals down the side, areas stacked): `capability-map-combined.html`. Same 47 anchors, different orientation. Use whichever reads more naturally for your overlay work.
